

1 Project Background

1.1 Introduction

1.1.1 *Overview of the Project and Environmental Statement*

- 1.1.1.1 In January 2010, Moray Offshore Renewables Limited (MORL) was awarded a Zone Development Agreement (ZDA) by The Crown Estate to develop Zone 1 of the nine UK offshore wind Round 3 zones. Zone 1 (the MORL Zone) is located in the outer Moray Firth within the UK Renewable Energy Zone (REZ) (Figure 1.1-1, Volume 3). Detailed analysis of the MORL Zone identified two separate development areas, the Eastern Development Area (EDA) and the Western Development Area (WDA) (Figure 1.1-1, Volume 3). It was decided to develop the EDA first because of existing spatial constraints to wind farm development in the WDA (see Chapter 2.2: Project Description for more detail). Within the EDA, consents under Section 36 of the Electricity Act 1989 have been granted for three offshore wind farm sites (referred to in this ES as the three consented wind farm sites):
- **Telford Offshore Wind Farm** (Telford), for which consents for construction and operation are owned by Telford Offshore Wind Limited;
 - **Stevenson Offshore Wind Farm** (Stevenson), for which consents for construction and operation are owned by Stevenson Offshore Wind Limited; and
 - **MacColl Offshore Wind Farm** (MacColl), for which consents for construction and operation are owned by MacColl Offshore Wind Limited.
- 1.1.1.2 In December 2010, MORL signed Agreements for Lease (AfL) with The Crown Estate for each of the three wind farm sites. Applications for Section 36 consents and Marine Licences for the wind farms and associated transmission infrastructure was sought in August 2012. These applications were supported by an Environmental Statement (the MORL ES (MORL, 2012)) which assessed the potential environmental effects of the Project (i.e. the wind farms and the offshore and onshore elements of the MORL transmission infrastructure as applied for). The Section 36 consents referred to above were awarded in March 2014 for construction of a maximum installed capacity of 1,116 MW, split equally between the three sites.
- 1.1.1.3 Due to changes explained below, modified Transmission Infrastructure (modified TI) (comprising both offshore and onshore electrical transmission infrastructure) required to transmit the power from the three wind farm sites to a connection point into the national grid, is being proposed and is the subject of this environmental statement (ES). MORL has been offered an amended connection to the existing 275 kV overhead transmission line, owned and operated by Scottish Hydro-Electric Transmission (SHE-T), located south of New Deer in Aberdeenshire (Figure 1.1-5, Volume 3). This existing 275 kV transmission line is also subject to planned upgrade works by SHE-T to 400 kV. In order to connect into the transmission line, two substations will be required in proximity to the line. An Offshore Transmission Owner (OFTO) will manage the modified TI which spans from the wind farm to the interface point with the national grid. The modified TI will include the offshore substations, onshore and offshore export cable and an onshore substation. A second onshore substation will be owned and operated by the regional onshore Transmission Owner (TO) and will be required in order to connect the OFTO assets to the national grid. Both onshore substations will be co-located and are included in the scope of this ES. MORL has decided to undertake the generator build of the modified TI and will turn the OFTO assets over to the OFTO upon commissioning. It is anticipated that the onshore substation which connects the OFTO assets to the national grid will be transferred to the regional TO prior to construction.

- 1.1.1.4 This ES details the results of the relevant studies and assessments in respect of the applications for Planning Permission in Principle under the Town and Country Planning (Scotland) Act 1997 (as amended) for the modified onshore TI (OnTI) and a Marine Licence for the modified offshore TI (OfTI) under the Marine (Scotland) Act 2010 and the Marine and Coastal Access Act 2009.
- 1.1.1.5 As discussed above the MORL ES assessed the potential environmental effects of the Telford, Stevenson and MacColl offshore wind farm (Offshore Generating Stations which together comprise the EDA) infrastructure proposal (i.e. wind turbines, substructures and interarray cables) together with associated transmission infrastructure. It was submitted in August 2012 (MORL, 2012). Section 36 consents were awarded on 19 March 2014 for construction of a power capacity of 1,116 MW. These three offshore wind farms are collectively referred to as the three consented wind farms in this ES. At the time of the Section 36 applications MORL also applied for a Marine Licence for its offshore TI to a landfall at Fraserburgh as MORL's grid connection point at the time was at Peterhead Power Station. The interconnection agreement with National Grid at Peterhead was for a direct current (DC) connection. Accordingly, the MORL ES contained the relevant assessments in support of a Marine Licence application for the OfTI and assessed the likely effects of the OfTI to Fraserburgh. In addition, the MORL ES, as far as possible, also assessed the effects of the OnTI to Peterhead. On 6 June 2014 Marine Scotland issued a Marine Licence for the offshore TI to Fraserburgh.
- 1.1.1.6 Since the submission of the MORL ES, the grid connection point has changed from Peterhead to southwest of New Deer. The change of interface point with the national grid was brought about due to MORL's participation in the Connections Infrastructure and Options Note (CION) process. CION is a joint process between National Grid, the regional TO and the generator builder which seeks to find the most economic and efficient grid connection solution against the current system background. Following this change in the grid connection point, MORL, as the generator-builder considers that a route from the EDA to a landfall at Inverboynie and then onshore to the existing overhead line southwest of New Deer requires to be progressed (Figures 1.1-4 and 1.1-5, Volume 3). In March 2014 MORL submitted a modification application to National Grid and has now been offered a modified connection agreement at New Deer. The agreement changes the technology from DC to AC as a result of a suite of studies which MORL undertook with the regional TO and MORL's consultant engineer. MORL has recently submitted a Marine Licence application to Marine Scotland in respect of the modified OfTI.
- 1.1.1.7 A summary of the differences between the OfTI and OnTI as assessed in the MORL ES and the modified OfTI and OnTI now assessed in this ES are summarised in Tables 1.1-1 and 1.1-2 below.
- 1.1.1.8 Table 1.1-1 Comparison of offshore infrastructure assessed in MORL ES (MORL, 2012) and this ES.

Table 1.1-1 Comparison of Offshore Infrastructure Assessed in MORL ES (MORL, 2012) and This ES

| Offshore Infrastructure | Parameter | As Assessed in MORL ES | Modified TI |
|-------------------------|-----------------------|---|--|
| Substations | Number | Up to 6 AC + 2 AC/DC OSPs | Up to 2 AC OSPs |
| | Foundation | Gravity Base Structure or jacket | Jacket or Jack-up |
| | Base Width Dimensions | GBS – Up to 130 m Jacket – Up to 100 m | Jacket or Jack-up – Up to 100 m |
| | Location | Three consented wind farm sites area plus 6 km buffer | Three consented wind farm sites area |
| Cables | Number | 4 (2 bundles of 2 cables) | 4 triplecore cables |
| | Length to shore | 105 km with micrositing allowance | 52 km from the boundary of the three consented wind farm sites area Up to 70 km of inter-platform and export cable within the boundary of the three consented wind farm sites area (with micrositing allowance) |
| | Type of cable | AC cabling between OSPs, DC from AC/DC OSPs to shore | AC cabling |
| | Voltage | 320 kV | 220 kV |
| | Location/design | East of Southern Trench | Cable route west of Southern Trench |
| Landfall | Location | Fraserburgh | Inverboynie |

Table 1.1-2 Comparison of Onshore Infrastructure Assessed in MORL ES (MORL, 2012) and This ES

| Onshore Infrastructure | Parameter | As Assessed in MORL ES | Modified TI |
|------------------------|------------------------------------|------------------------|--|
| Substations | Number of AC/DC converter stations | 1 | 0 |
| | Number of substations | 1 | 2 |
| | Compound dimensions | 200 x 170 m | 270 x 305 m (including both substations) |
| Cables | Number | 2 | 4 (trefoil arrangement) |
| | Length | 30 km | 33 km |
| | Voltage | 320 kV | 220 kV |
| | Target burial depth | 1 m | 1 m |
| | Number of trenches | Up to 2 | Up to 4 |

1.1.1.9 This document (together with those relevant parts of the MORL ES which are cross-referenced in this ES) constitutes the ES for the modified TI given the change in grid connection, however a cumulative assessment has also been undertaken assessing the effects of the modified TI together with the three consented wind farm sites, the BOWL wind farm and transmission infrastructure and with those projects and proposals which have been identified for inclusion in the cumulative assessments through consultation, which are specified in each assessment. The Section 36 consents for the three consented wind farms limited the original design envelope as applied for and assessed in the MORL ES. The differences in the Rochdale envelope as applied for and consented are set out in Table 1.1-3 below. The cumulative assessments in the ES use updated assessments for the three wind farms as consented rather than as assessed in the MORL ES.

Table 1.1-3 Difference in the Rochdale Envelope as Applied for (MORL, 2012) and as Consented

| Offshore Generating Stations | Parameter | As Assessed in MORL ES | As Consented |
|------------------------------|----------------------------------|------------------------|--------------|
| Capacity | EDA | 1,500 MW | 1,116 MW |
| | Per wind farm | 500 MW | 372 MW |
| Turbine Types | Blade tip height | 204 m | 204 m |
| | Rotor diameter | 120 – 172 m | 150 – 172 m |
| | Number of turbines in EDA | 339 | 186 |
| | Number of turbines per wind farm | Up to 139 | Up to 62 |
| Turbine Minimum Spacing | Crosswind | 600 m | 1,050 m |
| | Downwind | 840 m | 1,200 m |

- 1.1.1.10 This ES details the outcomes of the Environmental Impact Assessment (EIA), which is required under EU Directive 2011/92/EU (which codifies Directive 85/337/EEC, as amended by Directive 97/11/EC and Directive 2003/35/EC). These directives are transposed into national law in the Marine Works (Environmental Impact Assessment) Regulations 2007 and the Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2011.
- 1.1.1.11 This ES is prepared to support the applications for consent for MORL's modified TI and is intended to clearly inform stakeholders of any likely significant effects, mitigation measures and residual effects expected to result from the modified TI.
- 1.1.1.12 The consents that are being sought are detailed in 1.1.6 of this Chapter.

1.1.2 Structure of the Environmental Statement

- 1.1.2.1 This ES has been organised into separate volumes to account for its size and to ease the readability of the document. The volumes are outlined in Table 1.1-4.

Table 1.1-4 ES Volumes and Sections

| ES Volume | ES Section |
|-----------|--|
| Volume 1 | Non-Technical Summary |
| Volume 2 | Environmental Impact Assessment: Baseline Information, Impact Assessments and Cumulative Impact Assessments for all offshore and onshore disciplines. A standalone Habitats Regulations Appraisal chapter and Residual effects summary chapter is also included. |
| Volume 3 | Figures |
| Volume 4 | Seascape, Landscape and Visual Assessment Photomontages and Visualisations |
| Volume 5 | Technical Appendices |

Non-Technical Summary (Volume 1)

- 1.1.2.2 A standalone Non-Technical Summary (NTS) of this ES has been produced. This document provides, in simple non-technical language, an overview of the modified TI and a summary of the key findings from this ES.

Environmental Impact Assessment (Volume 2)

- 1.1.2.3 This Volume provides detailed information on the modified TI, the baseline environment and an assessment of the likely significant effects that may occur from the construction, operation and decommissioning phases of the modified TI. Further details on the approach taken throughout the EIA process can be found in Chapter 1.3, Environmental Impact Assessment.

- 1.1.2.4 An outline of the overall format of this Volume is given below.

- 1.1.2.5 **Chapter 1 (Volume 2)** forms the project background providing an introduction to the project and the context for the EIA. The chapter specifically covers the following:

- The policy, legislative and planning context;
- The approach to the EIA; and
- A summary of the stakeholder engagement and consultation undertaken to date.

- 1.1.2.6 **Chapter 2 (Volume 2)** details the site selection process and the alternatives considered, as well as the overall project description, specifically covering the following:

- The site selection process and alternatives considered;
- The modified TI design and the construction, operation and decommissioning process for the modified TI; and
- The application of Rochdale Envelope principles.

- 1.1.2.7 **Chapters 3 – 5 (Volume 2)** describe the baseline information, impact assessment and cumulative impact assessment of all physical, biological and human disciplines.

- 1.1.2.8 The baseline information characterises the development area, describing baseline conditions for each aspect of the environment likely to be significantly affected by the development.
- 1.1.2.9 The impact assessment results are described in relation to physical, biological and human receptors that are likely to be significantly affected by the modified TI. Each impact assessment chapter is structured accordingly:
- Introduction – Introduces the topic under discussion and sets out the consultation carried out, the baseline and relevant legislation, policy and guidance;
 - Summary – Key impact assessment outputs;
 - Rochdale Envelope parameters – Sets out the realistic worst case scenario in terms of the modified TI's parameters for the EIA discipline being assessed;
 - EIA Methodology – Description of the impact assessment methodology utilised;
 - Impact Assessment – Assessment of the likely significant effects arising from development;
 - Proposed Monitoring and Mitigation – description of proposed mitigation measures during construction, operation and decommissioning phases, based upon likely significant effects;
 - Cumulative Impact Assessment – Assessment of the likely significant cumulative effects arising as a result of interactions between the modified TI and other existing and reasonably foreseeable projects and activities; and
 - Habitats Regulations Appraisal (HRA) – where impact assessment chapters consider the potential for effects on Natura 2000 sites, then a summary of the information to support an Appropriate Assessment is present. The relevant disciplines to which HRA applies in this ES are Fish and Shellfish Ecology (Chapter 4.2), Marine Mammals (Chapter 4.3), Marine Ornithology (Chapter 4.4), and Terrestrial Ecology (Chapters 4.6). An HRA Summary chapter is also provided in Chapter 6, which gathers together the conclusions of all the chapters that have considered HRA.
- 1.1.2.10 **Chapter 6 - (Volume 2)** details relevant information provided by MORL in support of the HRA for the MORL modified TI. The information within this chapter will allow the competent authority (in relation to the offshore aspects it will be Marine Scotland and in relation to onshore aspects it will be Aberdeenshire Council) to carry out a HRA, and if necessary an Appropriate Assessment (AA).
- 1.1.2.11 **Chapter 7 – (Volume 2)** summarises the assessments of each discipline in tabular format indicating the residual effects for each effect identified.
- 1.1.2.12 **Volumes 3 and 4** contain the supporting figures to the above sections.
- 1.1.2.13 **Volume 5** contains the discipline specific technical appendices that support the ES chapters.
- 1.1.3 Definition of Terms**
- 1.1.3.1 For the purposes of this ES and the assessment within, the definitions detailed in Table 1.1-5 below have been used. A full Glossary of the terms used in this ES and a list of the Abbreviations used are located in the Preface to this ES.
- 1.1.3.2 Table 1.1-5 Definition of terms used in this ES.

Table 1.1-5 Definition of Terms

| Term | Definition |
|--|--|
| MORL | Moray Offshore Renewables Limited (MORL), the body submitting the applications to the Modified Project. |
| This ES | This environmental statement for the MORL modified Transmission Infrastructure |
| The Modified Project | The development proposal in its entirety, including the modified Transmission Infrastructure and the three consented wind farm sites. |
| MORL Zone | The Round 3 Zone 1 area awarded to MORL by the Crown Estate which is comprised of the Eastern Development Area and Western Development Area (see Figure 1.1-1, Volume 3) |
| Eastern Development Area (EDA) | MORL Zone for which Section 36 applications have been applied for and consent has been granted (see Figure 1.1-1 and 1.1-2, Volume 3). |
| Western Development Area (WDA) | MORL Zone area to the west of the EDA. EIA has not been progressed on this area yet (see Figure 1.1-1, Volume 3). |
| Modified Transmission infrastructure (modified TI) | Includes both offshore and onshore elements necessary for electricity transmission and interconnection both within the area of the three consented wind farms and the route between the three consented wind farms to connection with the national grid at New Deer; encompassing AC OSPs, AC export cable offshore to landfall point at Inverboynie continuing onshore to the AC collector station and the additional regional TO substation at New Deer. |
| Modified offshore transmission infrastructure (modified OfTI) | Offshore elements of the modified Transmission Infrastructure (i.e. OSPs, inter-platform cables and offshore export cable) (see Figure 1.1-4, Volume 3) as described in section 2.2.6. |
| Modified offshore export cable route corridor | Modified offshore cable route corridor (see Figure 1.1-4, Volume 3) |
| Modified offshore export cable route | The route of the offshore export cable located within the modified offshore export cable corridor. |
| Modified export cable landfall(s) | Area at Inverboynie where the modified OfTI meets the modified OnTI. |
| Modified onshore transmission infrastructure (modified OnTI) | Onshore elements of the modified Transmission Infrastructure (i.e. onshore export cable, two onshore substations) (see Figure 1.1-5, Volume 3) as described in section 2.2.7. |
| Modified onshore export cable route corridor | Modified Onshore cable route corridor (see Figure 1.1-5, Volume 3) |
| Modified onshore export cable route | The route of the onshore export cable located within the modified onshore export cable corridor. |
| The MORL ES | The ES submitted in support of the Project in August 2012. |
| Three consented wind farms | Telford, Stevenson and MacColl wind farms as consented on 19 March 2014 by the Scottish Ministers under Section 36 of the Electricity Act 1989 |
| The Project | Up to three wind farm sites (Telford, Stevenson and MacColl) within the EDA, together with the offshore and onshore transmission infrastructure as applied for in August 2012. |
| Rochdale Envelope | The range of design parameters that the assessments have been based upon and upon which the worst case scenarios for each assessment have been based. |

1.1.4 *The Developers*

- 1.1.4.1 MORL is a joint venture (JV) that was established by EDP Renewables (EDPR UK) and SeaEnergy Renewables Ltd. In June 2011, SeaEnergy Renewables Ltd was acquired by Repsol Nuevas Energias UK. MORL is now owned 67 % by EDPR UK and 33 % by Repsol Nuevas Energias UK.
- 1.1.4.2 The purpose of MORL is to develop projects within the MORL Zone. Special Purpose Vehicles (SPVs) have been established to consent, construct, operate and maintain the offshore wind farm sites within the EDA. These SPVs are Telford Offshore Wind Limited, Stevenson Offshore Wind Limited and MacColl Offshore Wind Limited. MORL will submit the necessary applications for consent for the modified TI.

1.1.5 Summary of Modified TI

Round 3 Zones

- 1.1.5.1 Zones were included within the UK Offshore Energy Strategic Environmental Assessment (SEA) for future leasing for offshore wind farms and licensing for offshore oil and gas and gas storage (DECC, 2009). The Government's plan, with respect to offshore wind was "*to enable further rounds of offshore wind farm leasing in the UK Renewable Energy Zone.....with the objective of achieving some 25 GW of additional generation capacity by 2020*". The alternatives considered within the SEA were:
- Not to offer any areas for leasing / licensing;
 - To proceed with a leasing and licensing programme; or
 - To restrict the areas offered for leasing and licensing temporally or spatially.
- 1.1.5.2 The MORL Zone was identified by The Crown Estate (TCE), along with eight other zones, for the development of offshore wind. These zones were opened to competitive bid by The Crown Estate and developers were invited to submit applications to develop the zones. The identification of the zones was completed by The Crown Estate with assistance from their marine asset planning tool MaRS (Marine Resource System). "MaRS is a decision support tool which interrogates third party data sets using GIS technology to identify potential areas for sectoral development. The tool produces three key outputs: site suitability for potential business activity, the sustainability value of that activity and financial analysis of the potential revenue to the business which will enable long term informed decision-making for marine development" (The Crown Estate, 2010).
- 1.1.5.3 The assessment of the alternatives, considered the need / demand for the plan, whether the technologies and methods were available to reduce environmental damage compared to more traditional methods, whether the potential geographical locations were suitable and the proposed timing of plan implementation. The following provides a summary of the reasons why the Government considered the plan necessary:
- Need: it was determined that the plan was required to mitigate the increasing reliance on fuel imports from other countries as oil and gas fields declined and therefore increase domestic production of energy. The plan was required to meet the UKs contribution to European Union renewable energy consumption targets;
 - Technologies / methods: it was determined that offshore wind technologies were constantly evolving with the introduction of efficient techniques that could reduce environmental footprints;
 - Location: The locations are a function of the available wind resource, geological history and existing sensitivities; and
 - Timing: Early implementation of the plan was determined to allow potential synergies between existing and new infrastructure.

Location

- 1.1.5.4 The three consented wind farms are located on the Smith Bank in the outer Moray Firth approximately 22 km (12 nm) from the Caithness coastline. The water depths range from 37–57 m (20 – 31 ftn). The MORL Zone itself covers 520 km² (281 nm²).
- 1.1.5.5 The modified TI will connect the three consented wind farms to the national grid via an onshore connection point south of New Deer. The offshore export cable route has a landfall point at Inverboynie, which is approximately 33 km in length in total

(Figure 1.1-5, Volume 3). The locations for the onshore substations have been identified to the southwest of New Deer (Figure 1.1-6, Volume 3).

- 1.1.5.6 The indicative timescales for the modified Project are detailed in Chapter 2.2 (Project Description), however, in brief, construction is programmed to commence Q2 2016 (onshore) and Q2 2017 (offshore). Working to the lengthiest construction schedule, construction of the modified TI is due to be completed in Q3 2021 and construction of the three consented wind farms is due to be completed Q3 2022.

Modified TI Description

- 1.1.5.7 A detailed description of the modified TI is set out in Chapter 2.2 (Project Description). There are three main elements to the modified TI, these being the offshore substation platforms (OSP) structures accommodating those assets necessary for the collection and conversion of power from the individual wind turbine generators (WTGs) within the three consented wind farms, the offshore export cables for the bulk transfer of power and the onshore assets (i.e. onshore export cables and substations) necessary to facilitate the final connection to the pre-existing assets of the National Electricity Transmission System (NETS).

- 1.1.5.8 The modified TI will consist of both onshore and offshore infrastructure the constituent parts of which can be summarised as OfTI and OnTI.

- 1.1.5.9 The OfTI will comprise:

- Up to two OSPs located within the boundary of the three consented wind farms. These will house substations which will form the interface between the inter-array cables and the offshore export cables;
- Export cables (up to four triplecore cables, separated by approximately four times water depth), buried to a target depth of 1 m. Where this burial depth cannot be achieved, cable armouring will be implemented (e.g. rock placement or concrete mattressing);
- Inter-platform cables in between the OSPs
- Cable landfall: the point at which the submarine cables are physically brought ashore;
- Subsea cabling specification: AC, voltage levels 220kV.

- 1.1.5.10 The OnTI will comprise:

- Onshore transition jointing pit: the interface between the offshore and onshore cables systems;
- Underground cables (up to 12 in four bundled trefoil arrangements in total, comprising a working corridor up to 60 m wide) from landfall point to grid connection point;
- Onshore cabling specification: AC, voltage levels 220kV;
- Associated civil ground works;
- Access roads;
- Temporary construction compounds, storage facilities, laydown areas and access tracks during the construction period;
- Onshore substations comprising:
 - Grid transformers;
 - HVAC switchgear;
 - Reactive compensation;

1.4 Stakeholder Consultation

1.4.1 *Introduction*

- 1.4.1.1 This chapter details the public stakeholder engagement carried out to support the offshore and onshore consent applications for the modified Transmission Infrastructure (TI) in respect of which this ES have been prepared. Details of stakeholder engagement specific to each receptor are included in each impact assessment chapter (Chapters 3 to 5).
- 1.4.1.2 Since commencing work on the Telford, Stevenson and MacColl offshore wind farms and associated TI (the Project) in 2010, MORL has been committed to delivering high standards of consultation, both with the general public and with the different organisations who hold either a geographic or subject-specific interest in the development, and the proposals for the modified TI follow on from extensive engagement work which has been undertaken to secure the Section 36 consents for the construction and operation of the three consented wind farms.
- 1.4.1.3 Proposals for the modified TI are therefore made against a background of high awareness of the Project as a whole, as many of the wide range of organisations, individuals and communities which have an interest in this work already have an established relationship with MORL.
- 1.4.1.4 A proposal of application notice was submitted to Aberdeenshire Council on 31 March 2014, and pre-application consultation letters containing copies of the notice were sent to the relevant Community Councils at this time. This informed the councils of the forthcoming public consultation for the modified Transmission Infrastructure and provided the relevant supporting information including a description of modified onshore transmission infrastructure (OnTI). The application for the Marine Licence for the modified offshore transmission infrastructure (OfTI) is not included within the scope of the proposal of application notice given that such a notice is a legal requirement in respect of the modified OnTI only. MORL has carried out additional stakeholder engagement with key consultees in relation to the marine environment (including Marine Scotland Science, Historic Scotland, relevant Oil and Gas stakeholders and commercial fisheries stakeholders and representatives).
- 1.4.1.5 Communications have been tailored to suit the geography of the modified TI, and activities in 2014 have included meetings with relevant stakeholder groups, local public exhibitions, and use of the local authority and community council frameworks to disseminate appropriately targeted literature to stakeholders, and to gather opinion on these proposals.
- 1.4.1.6 A Pre-Application Consultation Report has been submitted to Aberdeenshire Council as part of the applications for the OnTI as required by Section 35C of the Town and Country Planning (Scotland) Act 1997 and the Town and Country Planning (Development Management Procedure) (Scotland) Regulations 2013.

1.4.2 *The Pre-Application Consultation*

Consultation Procedure

- 1.4.2.1 The consultation procedure and related regulations were described at length in the MORL ES (MORL, 2012). This outlined the most significant elements of the consenting and licensing regime, which can be split into onshore and offshore activities. Marine Scotland is responsible for matters relating to the licensing of the modified OfTI, and the local planning authority, Aberdeenshire Council, takes responsibility for matters relating to the consenting of the modified OnTI.

Offshore Works

- 1.4.2.2 In terms of the Marine (Scotland) Act 2010, from 6 April 2011 the Scottish Ministers became responsible for the marine licensing system for activities carried out in the Scottish inshore waters from 0 – 12 nautical miles (nm). Under the Marine and Coastal Access Act 2009, the Scottish Ministers also became the licensing and enforcement authority for the Scottish offshore region (from 12 to 200 nm) other than in respect of reserved matters. These functions are carried out by Marine Scotland, part of the Scottish Government.
- 1.4.2.3 The Marine (Scotland) Act 2010 makes certain provisions (in Sections 22 to 24) for pre-application consultation for various classes of marine licensable activity. The Marine Licensing (Pre-application Consultation) (Scotland) Regulations 2013 came into force on 6 April 2014. These Regulations were not in force at the time that the Marine Licence application for the modified OfTl was submitted to Marine Scotland and therefore there are no pre-application consultation requirements in respect of the current Marine Licence application for the modified OfTl.
- 1.4.2.4 Under the Marine Works (Environmental Impact Assessment) Regulations 2007 there are regulations requiring the appropriate authority either to publicise the receipt of the application and ES, and to send copies to relevant consultees, or to issue a direction to the applicant requiring the applicant to do so (see regulations 16 and 17).
- 1.4.2.5 At the time of the Marine Licence application for the modified OfTl, the requirements were that unless an applicant is specifically required by the Scottish Ministers to notify and consult in terms of Section 23(6) of the 2010 Act, public engagement activity is driven by the EIA regulations. These regulations provided a minimum requirement for offshore development in terms of the EIA process, including publication of and consultation on the EIA Scoping Report, and publication of the Environmental Statement associated with the application. MORL published and consulted on the Scoping Report for the modified TI during April and May 2014 and this ES is the Environmental Statement associated with the Marine Licence Application for the modified OfTl.

Onshore Works

- 1.4.2.6 The Town and Country Planning (Development Management Procedure) (Scotland) Regulations 2013 require that certain prescribed public consultation activities require to be undertaken to the satisfaction of local planning authorities for national development and major development. Note that these regulations relate only to onshore works. These regulations require the prospective applicant to consult every community council, any part of whose area is within or adjoins the land where the proposed development is situated, and in doing so is to give a copy of the proposal of application notice to such community council. Applicants must hold at least one public event where members of the public may make comments to the prospective applicant in regards the proposed development. Applicants must also publish in a local newspaper the locality details of the application, the public consultation event and details of where representations about the proposed development may be sent. A pre-application consultation report must also be published for major or national development, in which applicants must report how they have responded to comments made and whether proposals have changed as a result of consultation.
- 1.4.2.7 MORL recognised that these regulations provided a minimum standard and that PAN3/2010 provided details of key principles of engagement as have been used in Scotland for onshore developments for many years. MORL developed an engagement strategy which aimed to set high standards of engagement and consultation using best practice from MORL's experience with the three consented wind farms and TI, MORL's parent company's (EDP Renewables) onshore

experience, staff experience from the Beatrice Demonstrator Project and from guidance contained in PAN3/2010. This strategy aimed to tie engagement closely to the EIA process in order to ensure that public and stakeholder engagement was always linked to project development.

Principles of Engagement

- 1.4.2.8 The engagement work to deliver the modified TI follows on directly from the engagement work which commenced in 2010 to deliver the consents for the Project, and utilises the relationships which have been established with various organisations, individuals and communities with an interest in the project.
- 1.4.2.9 MORL established its basic principles of engagement at an early stage in development of the Project through the publication of a Stakeholder Engagement Strategy in January 2010. These principles are being applied to the modified TI consenting process. From the outset of the MORL development process in 2010, it was determined that MORL's engagement process should progress through working with the organisations, individuals and communities who have an interest in the Project, whether as a result of their activities or their location. The aim was to enable the development of offshore wind farms and their associated TI in the Moray Firth to benefit from the considerable experience of the communities who live and work there, and to allow the Project to develop with the involvement of the individuals and organisations affected by and interested in the development. A commitment was made that development should be something that is undertaken with, rather than imposed upon, the communities which the Project affects.
- 1.4.2.10 When MORL originally developed the strategy it recognised that the Project was significantly different from conventional onshore projects, and that the then current community engagement advice (PAN81) pre-dated offshore wind development and the new challenges this brings. Although, in Scotland, there is no statutory requirement for broader stakeholder engagement for projects of this nature, the principles contained within PAN81 were adopted by MORL. PAN81 was superseded by PAN3/2010, and the strategy and activities were reviewed in consideration of the new advice. The principles of openness, accountability and transparency form the basis of MORL's stakeholder engagement strategy; however the geography and nature of the Project demanded that new deployment tactics be developed to deliver these principles against a stakeholder geography, that is much wider than is usually associated with conventional infrastructure projects.
- 1.4.2.11 In order to ensure that stakeholder engagement is meaningful to the development of the Project, and that stakeholders were kept fully informed of the development process, the Engagement Strategy was closely linked to the EIA process. This allowed for both input from and feedback to stakeholders through the establishment and maintenance of relationships with stakeholders on an individual, organisational and community level, requiring different approaches to maximise involvement opportunities. This relationship continued through wind farm consent determination and remains through the determination of the modified TI.
- 1.4.2.12 The modified TI presents a different focus to the requirements of an engagement strategy, owing to the smaller geographic focus of the proposed infrastructure. The principles established in the Stakeholder Engagement Strategy remain, however the application of those principles require to be much more closely focussed with regard to the onshore elements of the modified TI, and the appropriate vehicle for delivering that engagement is the Pre-Application Consultation required by the Town and Country Planning (Development Management Procedure) (Scotland) Regulations 2013.

1.4.3 Public Engagement – Pre-Application Consultation

- 1.4.3.1 The Town and Country Planning (Development Management Procedure) (Scotland) Regulations 2013 establish a framework for pre-application consultation with local communities potentially affected by a development, and provide an opportunity for the developer to establish a relationship with the communities which will host and neighbour the development.
- 1.4.3.2 A Pre-Application Consultation Plan was drafted in advance of the planning application being made, and the plan was agreed in consultation with the local planning authority. MORL's pre-application consultation plan was agreed with Aberdeenshire Council and is set out fully in the Pre-Application Consultation Report which accompanies the application for Planning Permission in Principle for the OnTI. The steps carried out by MORL were:
1. On 31 March 2014, a proposal of application was submitted to Aberdeenshire Council and eight community councils local to the proposed development. This commenced a statutory 12 week consultation period.
 2. The notification included details of three public exhibitions:
 - The Village Hall, New Deer, Tues 10 June
 - The Fife Lodge Hotel, Banff, Wed 11 June
 - Portsoy – Station Hotel, Thurs 12 June
 3. The public exhibitions were advertised for the two weeks preceding the events in the following newspapers:
 - Banffshire Journal
 - Buchan Advertiser
 - Buchan Observer
 - Turriff Advertiser

In addition, the events were advertised on village notice boards, in shop windows, village halls, etc.

4. One week prior to the public exhibitions, the eight community councils local to the proposed development were sent a reminder notification of the public events.
5. Public exhibitions were held as per the dates above, each had the following elements:
 - Open from 12.00 pm until 8.00 pm. This is intended to provide accessibility for those who can attend during a lunch-hour, as well as provision for those who are only able to attend after the end of the working day;
 - A story-board display, providing location and information on the modified Project.
 - Staffed by members of the project team, from consenting and engineering divisions. Use of project staff rather than PR consultancy staff enables direct communication between stakeholders and the project, as well as providing the most up-to-date information about the proposed infrastructure and its relationship with other aspects of the project;
 - Feedback on the proposals collected through opinion survey leaflets, thus allowing consultation rather than simple provision of information.

- 1.4.3.3 In total, 135 members of the public attended the exhibitions, which were staffed by members of the MORL project team. Full details may be found in the Pre Application Consultation Report which accompanies the planning application for the modified OnTI.

Scoping Consultation

- 1.4.3.4 The publication of the EIA Scoping Report in April 2014 represented the first opportunity to formally place details of the modified TI and its likely effects in the public domain. The Scoping Report was a key document in establishing the nature of the modified TI and its potential effect on different receptors. The Scoping process provided the basis for identification of issues across the range of stakeholder groups and involved engagement with both statutory and non-statutory organisations. This engagement was followed through the development of relationships between MORL and the range of external stakeholders. The stakeholders who were sent the modified TI Scoping Document are detailed in Table 1.4-1.
- 1.4.3.5 In addition, the modified TI Scoping Report was made available on the MORL website.

Table 1.4-1 Stakeholder Recipients of the Scoping Document for the modified TI

| Stakeholder | Stakeholder |
|--|---|
| Scottish Natural Heritage | Royal Yachting Association |
| Joint Nature Conservation Committee | Royal Society for the Protection of Birds |
| Scottish Environmental Protection Agency | Scallop Association |
| Aberdeenshire Council | Scottish Canoe Association |
| Moray Council | Scottish Fisheries Federation |
| Association of Salmon Fishery Board | Scottish Wildlife Trust |
| BOWL | Scottish Hydro Electric Transmission |
| British Telecom | Surfers Against Sewage |
| Civil Aviation Authority | Whale and Dolphin Conservation |
| IGAS Energy | Ports and Harbours |
| Chamber of Shipping | Historic Scotland |
| The Crown Estate | Transport Scotland |
| Cruising Association | Ithaca Energy |
| Defence Infrastructure Organisation | Bond Offshore Helicopters |
| Faroese Telecom | CHC Helicopters |
| Highlands and Islands Airports Limited | Bristow's Helicopters |
| Joint Radio Company | University of Aberdeen |
| Maritime and Coastguard Agency | Cromarty Firth Port Authority |

| Stakeholder | Stakeholder |
|---------------------------|-------------------------------|
| Marine Safety Forum | PA Resources |
| Marine Scotland | Moray Firth Sea Trout Project |
| Moray Firth Partnership | Buckie Library |
| NATS Safeguarding | Turriff Library |
| Northern Lighthouse Board | Scottish Government Library |

1.4.4 Post-Application Engagement

A programme of post-application engagement is planned in order to provide broad public awareness of the modified TI and its consent applications. This will include relevant details and specifically tailored communications for works which will be undertaken in the community.

All communications are co-ordinated by MORL Communication Manager, Craig Milroy.

1.3 Environmental Impact Assessment

1.3.1 Requirement for Environmental Impact Assessment (EIA)

- 1.3.1.1 EU Directive 2011 / 92 / EU (the codified EIA Directive) requires certain types of development which are considered likely to cause significant environmental effects to be subject to EIA. The types of development to which the Directive applies are specified in Annexes I and II to the Directive. The purpose of the EIA Directive is to ensure that, in considering whether to grant consents for developments that are likely to have significant environmental effects, the consenting authorities have all the necessary environmental information on which to base their decision.
- 1.3.1.2 Different consenting regimes apply to different parts of the modified transmission infrastructure (modified TI) as it involves both offshore and onshore elements. This means a Marine Licence must be applied for to cover the offshore elements of this infrastructure (OSPs and export cable) under the Marine (Scotland) Act 2010 and the Marine and Coastal Access Act 2009, while planning permission onshore must be applied for under the Town and Country Planning (Scotland) Act 1997. For more information on legislation see Chapter 1.2 (Regulatory and Policy Context) and Technical Appendix 1.2 A.
- 1.3.1.3 Under the Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2011, the onshore substations are classified as Schedule 2 development (given the development area) and therefore require an EIA. MORL has elected to include the export cables (onshore and offshore) and OSPs in the EIA as they form an integral part of the modified TI and therefore are a part of EIA development.
- 1.3.1.4 It is MORL's view that the offshore transmission infrastructure (OfTI) may also be subject to the requirement for an EIA under the Marine Works (Environmental Impact Assessment) Regulations 2007 (as amended) and so MORL have also followed these Regulations in the preparation of this EIA.
- 1.3.1.5 This ES contains an update to the assessments carried out in the MORL ES (MORL, 2012). The approach to the EIA as set out below is consistent with that adopted for the MORL ES. Any variations in methodology are set out in each EIA discipline chapter and unless stated otherwise are as used in the MORL ES.

1.3.2 The EIA Stages

Screening

- 1.3.2.1 A screening assessment is used to determine whether EIA is necessary. The onshore substations, due to the area they cover, fall within Schedule 2 of The Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2011 and therefore require EIA. For this reason, there was no need for MORL to carry out the screening stage of the EIA process.

Scoping

- 1.3.2.2 Where a development is required to undergo EIA, the developer may request a scoping opinion from the consenting authorities which will assist in the identification of environmental issues and likely significant effects to be considered, as well as discussing methods of impact assessment.
- 1.3.2.3 The scoping document for the modified TI was submitted in April 2014. The scoping document submitted by MORL set out the details of the proposed development and an assessment of where there are likely to be environmental effects.

- 1.3.2.4 The views of statutory consultees, all relevant stakeholders and the general public were sought as part of the scoping process; scoping is therefore very much a process of stakeholder engagement. A list of the stakeholders that were provided with a copy of the scoping report and invited to comment can be found in Chapter 1.4 (Stakeholder Consultation).
- 1.3.2.5 A formal scoping opinion was received from Marine Scotland and Aberdeenshire Council as the local planning authority in June 2014 (Technical Appendix 1.3 A). Tables are presented at the end of this Chapter providing a summary of the scoping opinion received from Marine Scotland and Aberdeenshire Council, for the modified OftI and modified OnTI respectively, and the other responses received from stakeholders and highlights the approach taken to the issues raised.

Environmental Impact Assessment

- 1.3.2.6 EIA is a process that identifies the aspects of the environment likely to be significantly affected by the modified TI, and which describes the likely significant environmental effects of the modified TI. It also identifies the methodologies employed to assess the main effects that the modified TI is likely to have on the environment. EIA also involves consideration and description of the measures envisaged to prevent, reduce and offset any significant adverse effects on the environment and a summary of the residual effects of the development after mitigation. The assessment covers the full life cycle of the development, from planning to decommissioning.
- 1.3.2.7 The information resulting from the EIA process is presented in an Environmental Statement so that a decision maker has full information on the likely significant environmental effects of a proposed development, at the time that the decision on whether to grant consent is made.

1.3.3 Environmental Impact Assessment Process

Baseline Data Gathering

- 1.3.3.1 Desk-based research of available literature was used to collect information for the EIA. In addition, specific surveys and studies that were required to support the EIA were identified through a review of the available literature and research for the Moray Firth area, the scoping opinions received for the modified TI and through consultation with various stakeholders. Many of the baseline surveys undertaken for the MORL ES are relevant for this ES. A summary of the baseline surveys and studies completed are listed in Table 1.3-1 below.

Table 1.3-1 Summary of Baseline Surveys and Studies Conducted for Modified TI

| Receptor | Surveys Conducted | Location of Full Methodology |
|---|---|-------------------------------------|
| Seabed Sediments and Composition | The geophysical survey campaign was undertaken April - June 2014 for the modified OftI. This was in addition to geophysical surveys undertaken on the EDA in 2010. | Chapter 3.1 |
| Geological Horizons | The geotechnical survey campaign was undertaken in April – July 2014, a total of 12 cone penetrometer tests were taken to depths between 0.3 m and 3.06 m on the modified cable route to Inverboynie. | Chapter 3.1 |
| Benthic Ecology | In May 2014 a benthic survey was undertaken on the modified cable route. This involved continuous drop-down video survey and seven grab samples along the proposed cable route. | Chapter 4.1 |

| Receptor | Surveys Conducted | Location of Full Methodology |
|--|--|--|
| Marine Ornithology | <p>Boat based visual observations were made between April 2010 and March 2012 across the Telford, Stevenson and MacColl sites and within a 4 km buffer zone around the outer perimeter of the sites.</p> <p>Migration surveys were done in September – November 2010 and March – May 2011 using dedicated observers on the boat based surveys and at coastal vantage points.</p> <p>GPS tracking of kittiwake, fulmar, guillemot and razorbill from the Birriedale Cliffs , within the East Caithness Cliffs SPA, was done in 2011 to monitor potential bird movements between the sites and the SPA.</p> <p>Aerial surveys were done of the entire zone plus a 4 km buffer zone in May, June, August, November and December 2009 and two more during February 2010. The first three surveys used high definition video using a 400 m wide transect and cameras with 2 cm resolution. The remaining 2009 and 2010 surveys were done using traditional aerial survey methods.</p> <p>Further aerial surveys were done in summer 2011 across a survey area between the EDA and nearby SPAs (East Caithness Cliffs, North Caithness Cliffs and Troup, Pennan and Lion's Head).</p> <p>This information is still relevant for the assessment in this ES.</p> | Chapter 4.5 of the MORL ES and Chapter 4.4 in this ES |
| Marine Mammals | <p>Boat based visual observations were made between April 2010 and March 2012 across the Telford, Stevenson and MacColl sites and within a 4 km buffer zone around the outer perimeter of the sites.</p> <p>Aerial surveys were done of the entire zone plus a 4 km buffer zone in May, June, August, November and December 2009 and two more during February 2010. The first three surveys used high definition video using a 400 m wide transect and cameras with 2 cm resolution. The remaining 2009 and 2010 surveys were done using traditional aerial survey methods.</p> <p>Acoustic devices (TPODs, CPODs and EARs) were deployed in the Moray Firth and within the zone to monitor for cetaceans between 2009 – 2012.</p> <p>This information is still relevant for the assessment in this ES.</p> | Chapter 4.4 of the MORL ES and Chapter 4.3 in this ES |
| Fish and Shellfish Ecology | In 2013, MORL undertook sandeel and cod spawning surveys within the EDA. | Chapter 4.2 |
| Commercial Fisheries (including salmon and sea trout) | Desk based studies and consultations have been ongoing since submission of the MORL ES. | Chapter 5.1 of the MORL ES and Chapter 5.1 in this ES. |
| Shipping and Navigation | <p>Automatic Identification Systems (AIS) surveys were undertaken with radars on board the geophysical vessels during April–May 2010 and August–October 2011.</p> <p>A fixed AIS radar has been placed onshore at Helmsdale and an additional one will be fitted on the offshore met mast which MORL intends to install in 2014.</p> <p>Further AIS information is being collected during the geophysical survey campaign on the wind farm (March – June 2014)</p> | Chapter 5.2 of the MORL ES and Chapter 5.2 in this ES. |

| Receptor | Surveys Conducted | Location of Full Methodology |
|---|---|---|
| Seascape, Landscape and Visual Receptors | <p>For the MORL ES Twenty four viewpoints selected and photographed for SLVIA assessment and a full assessment of seascape and landscape characteristics within 50 km of the Telford, Stevenson and MacColl sites undertaken. These viewpoints remain relevant for the assessments undertaken in this ES.</p> <p>For this ES, 8 viewpoints have been selected and photographed for the LVIA assessment, particularly at the substations location.</p> | Chapter 5.4 of the MORL ES and Chapter 5.3 in this ES |
| Archaeology and Cultural Heritage | <p>A detailed geophysical and geotechnical campaign has been undertaken in 2010 and in 2014, data from these will be analysed for archaeological interest.</p> <p>For onshore archaeology, a full walkover survey has been undertaken along the OnTI route.</p> | Chapter 5.4 |
| Terrestrial Ecology | <p>Ecological Field studies have been undertaken to inform the assessment of the modified transmission infrastructure. These included:</p> <p>Wintering: birds November 2013 - March 2014</p> <p>Ecology: May 2014</p> <p>Breeding birds: May – July 2014</p> | Chapter 4.6 |
| Onshore Noise | Acoustic surveys were undertaken along the onshore cable route in May/June 2014. | Chapter 3.3 |
| Traffic & Transport | Automatic traffic counts along the onshore cable routes were done in May/June 2014. | Chapter 5.6 |
| Hydrology | Site visits along the onshore cable route and peat probing at the onshore substation site were undertaken in May/June 2014. | Chapter 3.2 |

Scope of Assessment

- 1.3.3.2 The discipline chapters of this ES identify all likely significant environmental effects of the modified TI. These effects cover a wide range of separate environmental topics. Therefore, a common format has been applied to each discipline, with consistent methodologies applied to assess the effects relating to each topic. The assessments were carried out by a range of consultants who are experts in their respective fields; a full list of the consultants involved in each discipline can be found in Table 1.3-2 below.
- 1.3.3.3 The methodologies for the assessment of each EIA discipline are outlined in the individual EIA discipline chapters and are based upon recognised good practice for that topic area. The standard format for each discipline is as follows:

Baseline Description Including:

- A short introduction to the discipline to be assessed;
- Interrelationships with other topics / receptors covered in other chapters of this ES;
- List of consultations undertaken (and a summary of how consultation responses have been acted upon) during baseline and impact assessment studies;
- A description of all baseline surveys, including methods and results; and
- Background to the receptor specific legislative and planning framework (where required) and relevant guidance;

Impact Assessments:

- Summary – provides concise summary of the salient points from the assessment of the relevant topic under discussion;
- A table detailing the expected residual effects and their significance;
- A description of the impact assessment methodology;
- A description of the Rochdale Envelope - each of the impact assessments is based on the Rochdale Envelope and the identified realistic worst case scenario during construction, operation and decommissioning;
- The Impact Assessment, setting out the likely significant effects arising from development of the modified TI;
- Identification of the proposed mitigation measures during construction, operation and decommissioning;

Cumulative Impact Assessments:

- Summary – provides concise summary of the salient points from the assessment of the relevant topic under discussion;
- A table detailing the expected residual effects and their significance for the modified TI; the modified TI with Telford, Stevenson and MacColl (the Whole Project) and the Whole Project with other relevant developments;
- A description of the impact assessment methodology;
- A description of the worst case scenarios for projects where detailed assessment is possible;
- The Cumulative Impact Assessment, setting out the likely significant cumulative effects arising from development of the Whole Project together with other developments;
- A total cumulative assessment of the likely significant effects for the whole project with all other relevant projects.
- General commentary of some anticipated future developments located in the Moray Firth and elsewhere.

Table 1.3-2 List of Consultants Undertaking Assessments by Discipline

| EIA Team | |
|--|--------------------------|
| Discipline | Organisation Responsible |
| Physical Environment | |
| Hydrodynamics, Sedimentary and Coastal Processes | ABPmer |
| Hydrology, Geology and Hydrogeology | Arup |
| Onshore Noise | Whyte Young Green |
| Biological Environment | |
| Benthic Ecology | Fugro EMU |
| Fish and Shellfish Ecology | Brown and May Marine |
| Marine Mammals | Natural Power |
| Marine Ornithology | Natural Power |
| Intertidal Ecology | Fugro EMU |

| EIA Team | |
|---|--------------------------|
| Discipline | Organisation Responsible |
| Terrestrial Ecology | RPS |
| Human Environment | |
| Commercial Fisheries | Brown and May Marine |
| Shipping and Navigation | Anatec |
| Seascape Landscape and Visual Receptors | Optimised Environments |
| Archaeology and Cultural Heritage | Wessex Archaeology |
| Socio-economics, Recreation and Tourism | SQW |
| Other Human Activities | RPS |

Transmission Infrastructure Impact Assessments

1.3.3.4 The assessment has been carried out on the selected route corridor, representing the impact assessment for the export cable route both offshore and onshore together with the offshore and onshore substations. The effects assessed include construction, operation and decommissioning phases of the modified Project.

EIA Methodology

1.3.3.5 The significance of an effect is based on an initial two phased approach to determine (i) the magnitude of the likely effects and (ii) the sensitivity of the receptor. The criteria used to classify both effect magnitude and receptor sensitivity have been substantially guided by current receptor specific guidance documents and best practice. It should also be noted that effects include the direct effects and any indirect, secondary, cumulative, short, medium and long term, permanent and temporary, positive and negative effects of the development, resulting from:

- The existence of the development;
- The use of natural resources; and
- The emission of pollutants, the creation of nuisances and the elimination of waste.

1.3.3.6 This ES also describes the forecasting methods used to assess the effects on the environment. Each Impact Assessment describes the methodology which has been used in respect of the relevant EIA discipline to assess the significance of the effects.

Mitigation and Residual Effects

1.3.3.7 Where likely significant adverse effects are identified, mitigation measures will be proposed to reduce the level of significance. The effect of the mitigation will be tested and the significance of residual effects will be determined.

ES Linkages

1.3.3.8 This ES considers the inter-relationships between the aspects of the environment that are likely to be affected by the construction, operation and decommissioning of the modified TI. This ES also assesses these effects cumulatively.

1.3.3.9 The consideration of inter-relationships is required under the EIA Directive, which states that an ES should include: “An assessment of the aspects of the environment likely to be significantly affected by the proposed Project, including, in particular, population, fauna, flora, soil, water, air, climatic factors, material assets, including the architectural and archaeological heritage, landscape and the inter-relationship

between the above factors." These inter-relationships are explained further in Plate 1.3-1 below

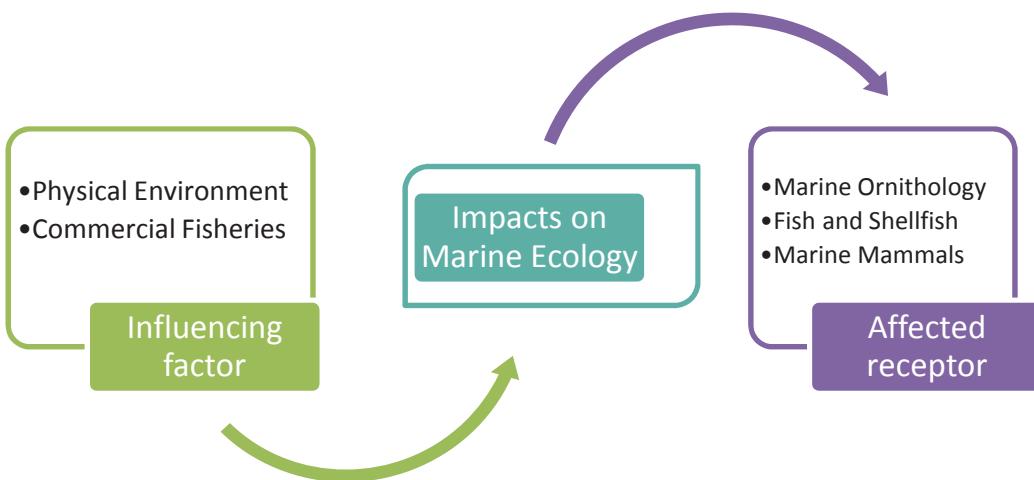

Plate 1.3-1 Example of Inter-linkages within the EIA

1.3.3.10 Inter-relationships are considered within each relevant ES chapter but, as a guide, Table 1.3-5 indicates where such inter-relationships have been identified.

Cumulative EIA Methodology

- 1.3.3.11 There is also a requirement to consider cumulative effects as part of the EIA process. Projects to be included in such an assessment must include existing projects, consented projects, those currently in the planning system and (where adequate information is available) other relevant future projects not yet in a consenting process, with potential to affect the same sensitive receptors as the modified TI.
- 1.3.3.12 There is no single statutory definition of what a cumulative effect is; however guidance is provided as to how the term should be defined. European Commission Guidelines for the Assessment of Indirect and Cumulative Impacts as well as Impact Interactions (European Commission, 1999) provides the following definition of cumulative effects:
- 1.3.3.13 Cumulative impacts are "*impacts that result from incremental changes caused by other past, present or reasonably foreseeable actions together with the Project. For example:*
- Incremental noise from a number of separate developments;
 - Combined effect of individual effects, e.g. noise, dust and visual, from one development on a particular receptor;
 - Several developments with insignificant effects individually but which together have a cumulative effect".
- 1.3.3.14 Additionally, the EC guidance refers to 'impact interactions' which themselves can combine to create a cumulative effect, defined as follows:
- 1.3.3.15 Impact interactions are "*the reactions between impacts whether between the impacts of just one project or between the impacts of other projects in the area*".
- 1.3.3.16 Examples of this are:
- A chemical plant producing two streams of waste that are individually acceptable but react together to produce highly significant levels of pollution;
 - Emissions to air from one project reacting with emissions from an existing development; and

- Two major developments being constructed adjacent to one another and during overlapping time periods will have many interactive impacts, from visual impacts to construction and operational noise.

- 1.3.3.17 To ensure consistency across assessments two comprehensive tables of current and potential offshore and onshore developments was created. Assessment was carried out in relation to the developments that could potentially have a direct / indirect effect on receptors in combination with the modified TI. The developments that were considered are detailed in Table 1.3-3 and table 1.3-4 below and shown on Figure 1.3-1. For the purposes of the assessment of likely significant cumulative effects on receptors, guidance on the scope and method is taken from the Moray Firth Offshore Wind Developers Group (MFOWDG) discussion document "Moray Firth Offshore Wind Developers Group Cumulative Impact Assessment Discussion Document" (Appendix 1.3 D, MORL 2012). Projects included for assessment were confirmed in feedback during scoping and in discussions with key stakeholders.
- 1.3.3.18 In terms of the cumulative assessment for all onshore disciplines, each chapter provides relevant information on the other developments considered relevant to the cumulative impact assessment.
- 1.3.3.19 The cumulative impact assessments include a Whole Project assessment, i.e. the modified TI and the three consented wind farms (Telford, Stevenson and MacColl) and a total cumulative impact assessment, i.e. the Whole Project plus any other consented or unconsented projects relevant to that discipline, where sufficient information is available. For terrestrial disciplines (excluding Seascape, Landscape and Visual Assessments) the Whole Project assessment consists of the modified TI as a whole where relevant i.e. the three consented wind farms are not included since there is no potential for cumulative effects predicted between the OnTI and the wind farms.
- 1.3.3.20 Where there is no increase in the level of significance of effect for the total cumulative impact assessment from that predicted for the residual effects of the modified TI on its own, or where the increase in significance is below the level which is significant in EIA terms, then the assessment is presented on the basis of the overall cumulative effect of the Whole Project with all other developments.
- 1.3.3.21 In the event that total cumulative impact assessment is significant in EIA terms, then the assessment details the cumulative effects of the Whole Project with (1) consented projects and the Western Development Area and (2) unconsented but reasonably foreseeable projects.
- 1.3.3.22 Where due to lack of detail about programmes and design parameters, it has not been possible to carry out an assessment of the likely cumulative effects of some anticipated future developments relevant to the cumulative impact assessment a general commentary has been provided but a level of significance is not assessed.

Table 1.3-3 Developments Considered Alongside the Modified OfTI in Cumulative Impact Assessment

| Project | Summary | Source |
|--|---|---|
| Offshore Wind Farms | | |
| European Offshore Wind Deployment Centre - EOWDC (Aberdeen Bay) | 11 wind turbines, up to 100 MW capacity. | http://www.vattenfall.co.uk/en/aberdeen-bay.htm |
| Beatrice Offshore Wind Farm (BOWL) | Up to 140 wind turbines, inter-array cabling. Maximum 750 MW. | http://www.scotland.gov.uk/Resource/004/00446511.pdf |
| MORL Western Development Area (WDA) | Up to 100 wind turbines (plans still in development) | Chapter 1 - Background, of original Telford, Stevenson and MacColl Offshore Wind Farms ES and this Modified Transmission Infrastructure ES. |

| Project | Summary | Source |
|--|---|--|
| Beatrice Wind Farm Demonstrator Project | 2 x 5 MW wind turbines | http://www.beatricewind.co.uk/home/ |
| Firth of Forth - Phase 1 | Phase 1 consists of 2 x 525 MW offshore wind farms (Projects Alpha and Bravo) in the Firth of Forth Offshore Wind Zone. Up to 75 wind turbines per wind farm, subsea cables, offshore substations, meteorological masts. | http://www.seagreenwindenergy.com/news.asp?s=2&nid=SWE-N10011 |
| Firth of Forth - Phase 2 & 3 | Phases 2 and 3 will comprise up to 5 wind farms, with a total installed capacity of up to approximately 2.6 GW. | www.seagreenwindenergy.com/assets/phase2-offshore/offshore-phase-2-report.pdf |
| Inch Cape | Up to 213 wind turbines, inter-array cables, up to 3 meteorological masts, up to 5 offshore substations, up to 6 offshore export cables. Capacity up to 1,000 MW. | http://www.inchcapewind.com/files/NTS/NTS.pdf |
| Hywind | Up to 5 wind turbines with a maximum individual generating capacity of 6 MW each mounted on a floating spar type structure. The whole structure is then held in place by a mooring system laid on the seabed. | http://www.scotland.gov.uk/Resource/0044/00446946.pdf |
| Kincardine Offshore Wind Farm | A pilot-scale offshore wind farm utilising floating foundation technology, which will demonstrate the technological and commercial feasibility of floating offshore wind | http://www.scotland.gov.uk/Resource/0044/00448819.pdf |
| Moray Firth - Eastern Development Area - Telford, Stevenson and MacColl | Total installed capacity of up to 1,116 MW, up to 186 wind turbines, inter-array cables, | http://morayoffshorerenewables.com/Document-Library.aspx?path=environmental+statement&fileid=58 |
| Neart na Gaoithe | Up to 125 wind turbines, up to 2 offshore substations, inter-array cables, two export cables, up to 450 MW capacity. | http://www.neartnagaoithe.com/environmental-statement1.asp http://mainstream-downloads.opendebate.co.uk/downloads/Neart-na-Gaoithe-Brochure-A5-%28low-res%29.pdf |
| Initial Plan Framework for Offshore Wind Energy in Scottish Waters | The Framework details the draft Plan Options for future commercial scale offshore wind developments on a regional basis around the Scottish coastline. In the North East region, within which the Moray Firth is located, there are two draft Plan Option areas for offshore wind development, referred to as 'OWNE1' and 'OWNE2'. OWNE2 is located closest to the MORL Project and modified OfT1, lying to the east, off Rattray Head. The Plan Option areas are earmarked as medium to long term development options. | Other Human Activities Chapter, MORL Modified Transmission Infrastructure Environmental Statement |

| Project | Summary | Source |
|--|--|---|
| Wave and Tidal | | |
| Meygen | Tidal stream project covering an area of 3.5 km ² in the channel between the island of Stroma and the north-eastern tip of the Scottish mainland. The Agreement for Lease is for 398 MW of installed capacity and will be consented in two separate phases. Phase 1 will involve the installation of up to 86 tidal turbines, with a maximum capacity of 86 MW. | http://www.scotland.gov.uk/Topics/marine/Licensing/marine/scoping/MeyGen |
| Other Tidal and Wave Developments in the Pentland Firth and Orkney Waters | A number of tidal and wave energy development have been proposed for the Pentland and Orkney waters. They have only been considered qualitatively in the cumulative assessment. | |
| CCS | | |
| CCS Demonstration Project | A CCS demonstration project where CO ₂ will be captured and transported via existing pipelines for offshore storage in Shell's Goldeneye depleted gas field. | Other Human Activities Chapter, MORL Modified Transmission Infrastructure Environmental Statement |
| Mains CCS Site | Further potential offshore storage hubs for carbon dioxide (CO ₂) in Scottish waters have been identified, including a site within the Moray Firth, referred to as 'Mains'. | Other Human Activities Chapter, MORL Modified Transmission Infrastructure Environmental Statement |
| Subsea Cables and Pipelines | | |
| Beatrice Offshore Wind Farm Ltd (BOWL) Transmission Works | The Transmission Works infrastructure includes the offshore cable, onshore cable and substation | http://sse.com/media/113142/BeatriceScopingReport2011.pdf |
| SHE-T Offshore HVDC Reinforcement | Caithness – Moray Link, which will be a subsea High Voltage Direct Current (HVDC) reinforcement of the transmission network between Caithness and Moray with two converter stations to allow for future connection to Shetland and offshore generation. Current route would cross modified OfSI. | http://www.scotland.gov.uk/Resource/0044/00449004.pdf |
| SHEFA Telecoms Cable | Existing SHEFA-2 fibre-optic submarine cable, running through the Moray Firth from the Faroe Islands via Shetland and Orkney to Banff. | http://www.shefa.fo/cable/ |
| Pipelines in Proximity to the Moray Firth Zone | PL252; PL112; 16 MOL Beatrice A to Shandwick Bay; Beatrice Bravo Oil Export. | http://www.scotland.gov.uk/Topics/marine/seamanagement/nmpihome/nmpi |

| Anemometer Masts | | |
| Cairnhill Farm | Single anemometer masts Approved | Aberdeenshire Council Planning - https://upa.aberdeenshire.gov.uk/online-applications/ |

Habitats Regulations Appraisal (HRA) Approach within this ES

- 1.3.3.23 High level conservation objectives of Special Areas of Conservation (SACs) and Special Protection Area (SPAs) (together referred to as European sites) are identified by each of the European member states to ensure that the integrity of the site is maintained by avoiding deterioration of the habitats of qualifying species or significant disturbance to qualifying species. The conservation objectives for each SPA or SAC are designed to ensure that the qualifying interest of each site is maintained in the long term. Whilst these are specific to each site, there are some general principles including:
- Population of the species as a viable component to the site;
 - Distribution of the species within the site;
 - Distribution and extent of habitats supporting the species;
 - Structure, function and supporting processes of habitats supporting the species; and
 - No significant disturbance to the species.
- 1.3.3.24 The information provided in this ES has taken into account the relevant information provided by MORL in support of the HRA for modified Transmission Infrastructure (modified TI). This information will allow the competent authority (in relation to the offshore aspects it will be Marine Scotland and in relation to onshore aspects it will be Aberdeenshire Council) to carry out a Habitats Regulations Appraisal (HRA), including if necessary an Appropriate Assessment (AA) under the Conservation (Natural Habitats & c.) Regulations 1994 (as amended) (the 'Habitats Regulations') and the Offshore Marine Conservation (Natural Habitats & c.) Regulations 2007 (as amended) (the 'Offshore Habitats Regulations'). The AA will be undertaken with advice given from statutory stakeholders.
- 1.3.3.25 The ES has been structured to allow all HRA information relevant to a particular receptor to be contained within a single ES chapter. A series of surveys and studies have been undertaken to inform both EIA and HRA. The potential for a significant adverse effect to occur as a result of the modified TI (alone, in its component parts and as a whole, and in-combination with other projects and activities) has been assessed and the results of assessment are presented in the relevant chapters (e.g. effects on SACs with migratory fish designated features are considered in the Fish and Shellfish Ecology chapter, and effects on SPAs and their designated bird species are considered in the Marine Ornithology and Terrestrial Ecology chapters). Potential direct, indirect and in-combination effects are assessed against the integrity of the sites, taking into account their Conservation Objectives.

1.3.3.26 The HRA assessment is undertaken as a four stage process:

- **Stage 1 Screening** - The process to identify the likely effects of a project upon a European site, either alone or in combination with other plans and projects, and consider whether the effects are likely to be significant.
- **Stage 2 Appropriate Assessment** - The consideration of the effects on the integrity of the European site, either alone or in combination with other plans and projects, with regard to the site's structure and function and its conservation objectives. Where adverse effects cannot be discounted, an assessment of mitigation options is carried out. If these mitigation options cannot avoid adverse effects on integrity then development consent can only be given if stages 3 and 4 are followed.
- **Stage 3 Assessment of Alternatives** - Examining alternative ways of achieving the objectives of the project to establish whether there are solutions that would avoid or have a lesser effect on European sites; and
- **Stage 4 Assessment of "imperative reasons of overriding public interest" (IROPI)** - This is the assessment where no alternative solution exists and where adverse effects remain. The process to assess whether the development is necessary for IROPI and, if so, the potential compensatory measures needed to maintain the overall coherence of the integrity of the European site network.

1.3.3.27 Three main approaches have been used in this ES to assess the likely effects of the modified TI (in isolation or cumulatively with other projects/proposals) on European Sites:

- **HRA Approach 1:** Where the results of the EIA have indicated no significant effects on the species/habitats for which sites have been designated (and taking into account the relevant European site conservation objectives) it has been possible at the screening stage to discount any likely significant effects and it was not therefore necessary to go on to consider the second stage of the HRA (ie Appropriate Assessment)"
- **HRA Approach 2:** Where an assessment has been undertaken for the three MORL consented wind farms and original TI in-combination with other developments/projects (MORL, 2012) and the assessment and conclusions remain valid, no additional information has been presented; and
- **HRA Approach 3:** Where it has not been possible to rule out a likely significant effect on a European Site at the screening stage, detailed information to support an AA has been presented.

1.3.3.28 The HRA Approach 1 was followed by two following disciplines:

- Marine Ornithology (Chapter 4.4); and
- Terrestrial Ecology (Chapter 4.6 and Technical Appendix 4.6 A).

1.3.3.29 The HRA Approach 2 was followed by Marine Mammals (Chapter 4.4).

1.3.3.30 Fish and Shellfish Ecology followed HRA Approach 3 (see Chapter 4.2 and Technical Appendices 4.2 A and 4.2 B).

1.3.3.31 The information to support the HRA is detailed in each of the above chapters and relevant appendices and summarised in Chapter 6.1 Habitats Regulations Appraisal.

Annex 1 to Chapter 1.3

Table 1 Relevant to Marine Scotland- Summary of Modified TI Scoping Opinions Received and Approach Taken to Issues Raised

| Organisation | Summary of Response | MORL Approach |
|--|--|---------------|
| 1. Introduction | | |
| * Moray Offshore Renewables Limited ("MORL") is seeking an Environmental Impact Assessment ("EIA") scoping opinion for the Modified Offshore Transmission Infrastructure ("MOTI") from Marine Scotland ("MS"), on behalf of the Scottish Ministers, under Section 13 of the Marine Works (Environmental Impact Assessment) Regulations 2007 (as amended) (the EIA Regulations"). | N/A | |
| * The MORL proposal is to connect the recently consented MORL Telford, Stevenson and MacColl Wind farms, under section 36 of the Electricity Act 1989 (19th March 2014) to the National Electricity Transmission System ("NETS"), close to New Deer in Aberdeenshire. MORL no longer has the option to connect to the NETS at Peterhead Power Station, therefore, the supporting Environmental Statement ("ES") for the recently issued marine licence (6th June 2014) for the original MORL Offshore Transmission Infrastructure will require to be amended for this revised route. | N/A | |
| * I refer to your letter of 11th April 2014, enclosing a scoping report, requesting a scoping opinion under the EIA Regulations. The outcomes of the EIA will result in the preparation of an Environmental Statement ("ES") to support the application, submitted 4th April 2014, for a marine licence under part 4 of the Marine (Scotland) Act 2010, and Part 4 of the Marine and Coastal Access Act 2009. | N/A | |
| Marine Scotland | * Please note that the EIA process is vital in generating an understanding of the biological and physical processes that operate in the area and those that may be impacted by the proposed transmission infrastructure. MS would however, state that references made within the scoping document with regard to the significance of impacts, should not prejudice the outcome of the EIA process. | Noted |
| | * It is important that any transmission infrastructure, in connection with any renewable energy devices, should be accompanied by a robust assessment of its environmental impacts. The assessment should also consider how any negative environmental impacts could be avoided or minimised through the use of mitigating technologies or regulatory safeguards, so that the quality and diversity of Scotland's wildlife and natural features are maintained or enhanced. The Scottish Ministers welcome the commitment given in the report that the EIA process will identify mitigation measures in order to avoid, minimise or reduce any adverse impacts. Marine Scotland Licensing Operations Team ("MS LOT") would suggest that the range of options considered should be informed by the EIA process in order that these objectives can be achieved. Consultation with the relevant nature conservation agencies is essential and it is advised that this is undertaken as appropriate. | Noted |

| Organisation | Summary of Response | MORI Approach |
|---|---------------------|---------------|
| 2. Aim of this Scoping Opinion | | |
| * The Scottish Ministers are obliged under the EIA regulations to respond to requests from developers for a scoping opinion on outline design proposals. | Noted | |
| * The purpose of this document is to provide advice and guidance to developers collated from expert consultees selected by MoS. It provides clear advice enabling developers to address issues identified with the proposed project. The advice steers the developer as to the content required in the EIA and the ES in accordance with the EIA Regulations. | Noted | |
| 3. Description of the development | | |
| The MoOffI will comprise of: | | |
| * Up to two OSPs located within the Eastern Development Area ("EDA"). These will house substations which will form the interface between the inter-turbine cables and the offshore transmission system; | | |
| * Transmission cables (up to four triplecore cables, separated by approximately four times water depth), buried to a target depth of one metre. Where this burial depth cannot be achieved, cable armouring will be implemented (e.g. rock placement or concrete mattressing). | | |
| Landfall for the transmission cables will either be at or near Inverboyndie or Sandend on the North coast of Aberdeenshire. | | |
| 4. Land Use Planning | | |
| The Regulatory and Policy Context is presented in Chapter 1.2, and the Planning Statement which accompanies this ES. | | |
| Marine Scotland (continued) | | |
| * The Scottish Government's planning policies are set out in the National Planning Framework, Scottish Planning Policy, Designing Places and Circulars. | | |
| * The National Planning Framework is the Scottish Government's Strategy for Scotland's long term spatial development. | | |

| Organisation | Summary of Response | MORI Approach |
|--|---|---------------|
| Marine Scotland (continued) | <p>Scottish Planning Policy ("SPP") is a statement of Scottish Government policy on land use planning and contains:</p> <ul style="list-style-type: none"> * The Scottish Government's view of the purpose of planning, * the core principles for the operation of the system and the objectives for key parts of the system, * statutory guidance on sustainable development and planning under Section 3E of the Planning etc. (Scotland) Act 2006, * concise subject planning policies, including the implications for development planning and development management, and * The Scottish Government's expectations of the intended outcomes of the planning system. <p>The Regulatory and Policy Context is presented in Chapter 1.2, and the Planning Statement which accompanies this ES.</p> | |

| Organisation | Summary of Response | MORI Approach |
|--------------|--|---|
| | <p>Other land use planning documents which may be relevant to this proposal include:</p> <ul style="list-style-type: none"> * Planning Advice Note ("PAN") 2/2011: Archaeology-Planning Process and Scheduled Monument Procedures * PAN 50: Controlling the Environmental Effects of Surface Mineral Workings * PAN 51: Planning, Environmental Protection and Regulation * PAN 1/2011: Planning and Noise * PAN 1/2013: Environmental Impact Assessment * PAN 60: Planning for Natural Heritage * PAN 62: Radio Telecommunications * PAN 68: Design Statements * PAN 69: Planning and Building Standards Advice on Flooding * PAN 75: Planning for Transport * PAN 79: Water and Drainage * Marine Guidance Note 371 (M) * Aberdeen City and Shire Structure Plan * Aberdeen City and Shire Strategic Development Plan * Aberdeenshire Local Development Plan * Moray Structure Plan * Moray Local Plan * Moray Economic Strategy <p>Marine Scotland (continued)</p> | <p>The Regulatory and Policy Context is presented in Chapter 1.2, and the Planning Statement which accompanies this ES.</p> |
| | <p>5. Natural Heritage</p> <ul style="list-style-type: none"> * Scottish Natural Heritage ("SNH") has produced a Service Level Statement ("SLS") for renewable energy consultation. This statement provides information regarding the level of input that can be expected from SNH at various stages of the EIA process. Annex A of the SLS details a list of references, which should be fully considered as part of the EIA process. A copy of the SLS and other vital information can be found on the renewable energy section of their website - http://www.snh.gov.uk/docs/A1070243.pdf | <p>Noted</p> |

| Organisation | Summary of Response | MORI Approach |
|---|---|--|
| 6. General Issues <u>Economic Benefit</u> | <p>* The concept of economic benefit as a material consideration is explicitly confirmed in the consolidated SPP. This fits with the priority of The Scottish Government to grow the Scottish economy and, more particularly, with our published policy statement “Securing a Renewable Future: Scotland’s Renewable Energy”, all of which highlight the manufacturing potential of the renewables sector. The application should include relevant economic information connected with the project, including the potential number of jobs, and economic activity associated with the procurement, construction operation and decommissioning of the development.</p> | Chapter 5.5 socio-economics provides an assessment on the Gross Added Value (GVA) and Employment effects from the construction, operation and decommissioning of the modified TI. |
| 7. Contents of the Environmental Statement | <p>* Guidance can be found in the Marine Works (Environmental Impact Assessment) Regulations 2007, Schedule 3</p> <p><u>Marine Scotland (continued)</u></p> <p><u>Format</u></p> <p>* Developers should be aware that the ES should also be submitted in a user-friendly PDF format which can be placed on The Scottish Government website. A description of the methodology used in assessing all impacts should be included.</p> | <p>Noted</p> <p>A CD with the ES and associated planning application documents for the modified TI will be submitted to Marine Scotland (and key stakeholders as advised by Marine Scotland and Aberdeenshire Council) and will be made available on the Moray Offshore Renewables Ltd. Website.</p> |
| | <p>* It is considered good practice to set out the qualifications and experience of all those involved in collating, assessing or presenting technical information within the ES.</p> | Noted |

| Organisation | Summary of Response | MORI Approach |
|---|---|--|
| <u>Non Technical Summary</u> | <p>This should be written in simple non-technical terms to describe the various options for the proposed development and the mitigation measures against the potential adverse impacts which could result. Within an ES it is important that all mitigating measures should be:</p> <ul style="list-style-type: none"> * clearly stated; * fully described with accuracy; * assessed for their environmental effects; * assessed for their effectiveness; * their implementation should be fully described; * how commitments will be monitored; and * if necessary, how they relate to any consents or conditions | <p>A NTS has been produced (for submission along with the ES and the relevant applications for the modified TI) in line with Marine Scotland's guidelines. The NTS forms Volume 1 of this ES.</p> |
| Marine Scotland (continued) | <p>(continued)</p> <p>Given that the layout and design of the proposals are still developing and evolving, the exact nature of the work that is needed to inform the EIA may vary depending on the design choices. The EIA must address this uncertainty so that there is a clear explanation of the potential impact of each of the different scenarios. It should be noted that any changes produced after the ES is submitted may result in the requirement of further environmental assessment and public consultation if deemed to be significant by the licensing authority.</p> | <p>Information on the design of the modified TI has been included in Chapter 2.2 Project Description. All disciplines have clearly stated the parameters used in each of the assessments taking into account the worst case scenario option (from those listed within the "Rochdale Envelope" parameters included in Chapter 2.2) and associated uncertainties for the effects assessed.</p> |
| Baseline Assessment and Mitigation | <p>Noted</p> <p>* Refer to Annex 1 for consultee comments on specific baseline assessment and mitigation.</p> | |

| Organisation | Summary of Response | MORI Approach |
|---|--|---|
| <p>8. Contents of the Environmental Statement</p> <p><u>General Principles</u></p> <ul style="list-style-type: none"> * The ES should address the predicted impacts on both the marine historic environment and the potential for the onshore impacts of terrestrial elements of the development. It should also describe the mitigation proposed to avoid or reduce impacts to a level where they are not significant. Historic environment issues should be taken into consideration from the start of the site selection process and as part of the alternatives considered. <p>Codes of practice relating to heritage and seabed development;</p> <p>Marine Scotland (continued)</p> | <p>The predicted effects and associated mitigation measures (for the modified TI and cumulatively with other projects/proposals) have been clearly stated in each discipline chapter. The overall EIA approach followed has been described in Chapter 1.3 Environmental Impact Assessment.</p> | <p>Noted.</p> <p>Each of the EIA discipline chapters sets out the relevant legislation and policies which have been taken into account within each of the assessments.</p> <p>Codes of practice relating to heritage and seabed development;</p> <ul style="list-style-type: none"> * JNAPC Code of Practice for seabed development http://www.jnapc.org.uk/jnacp_brochure_may_2006.pdf * COWRIE guidelines for offshore renewables and the historic environment http://www.offshorewind.co.uk/Assets/cowrie_clarchaeo_guidance.pdf * COWRIE guidelines on cumulative assessment of offshore renewables and the historic environment http://www.offshorewind.co.uk/Assets/cowrie_clarch%20web.pdf * Offshore Geotechnical Investigations and Historic Environment Analysis: Guidance for the Renewable Energy Sector, January 2011 http://www.offshorewindfarms.co.uk/Assets/Offshore%20Geotech%20Guidance%20web.pdf * Model Clauses for Archaeological Written Schemes of Investigation: Offshore Renewables Projects http://www.wessexarch.co.uk/system/files/WSI%20Renewables_low%20es.pdf * British Marine Aggregates Producers Association protocols for archaeological discoveries http://www.wessexarch.co.uk/files/projects/BMAPA-EH-Guidance-Note-April-2003.pdf * Protocol for Archaeological Discoveries: Offshore Renewables Projects http://www.wessexarch.co.uk/files/The%20Crown%20Estate_Offshore%20Renewables-PAD.pdf |

| Organisation | Summary of Response | MORI Approach |
|---|---|---|
| National policy and advice for the historic environment is set out in: <ul style="list-style-type: none"> * SPP http://www.scotland.gov.uk/Topics/Built-Environment/planning/National-Planning-Policy/newsSPP * The Scottish Historic Environment Policy ("SHEP") http://www.historic-scotland.gov.uk/shep-dec2011.pdf * Planning Advice Note 02/2011 Planning and Archaeology (PAN 02/2011) http://www.scotland.gov.uk/Resource/Doc/355385/0/20020.pdf <ul style="list-style-type: none"> * The Scottish Minister's policies for the historic environment are set out in paragraphs 110 – 124 of SPP. Amongst other things, SPP stresses that scheduled monuments should be preserved in situ and within an appropriate setting and states that developments must be managed carefully to preserve listed buildings and their settings to retain and enhance any special architectural or historic features of interest. Further information on setting can be found in the following document: Managing Change in the Historic Environment http://www.historic-scotland.gov.uk/setting-2.pdf. Impacts on undesignated aspects of the historic environment should also be taken into account as part of any EA. | <p>Noted.</p> <p>Each of the EIA discipline chapters sets out the relevant legislation and policies which have been taken into account within each of the assessments.</p> | |
| Marine Scotland (continued) | <p>The relevant policies on cultural heritage have been taken into account in Chapter 5.4 Archaeology and Cultural Heritage.</p> <ul style="list-style-type: none"> * Historic Scotland recommend that you engage a suitably qualified archaeological/historic environment consultants to advise on, and undertake, the detailed assessment of impacts on the historic environment and advise on appropriate mitigation strategies. | <p>Wessex Archaeology has advised MORI on archaeology and cultural heritage matters.</p> <p>Wessex Archaeology has a wide experience in archaeology and cultural heritage assessments for similar developments and have produced a number of guidelines for such assessments.</p> <p>Data collection and assessment approaches have been agreed with Historic Scotland.</p> |

| Organisation | Summary of Response | MORI Approach |
|--|--|--|
| <p><u>Baseline Information</u></p> <p>* Information on the location of all archaeological/historic sites held in the National Monuments Record of Scotland, including the locations and, where appropriate, the extent of scheduled monuments, listed buildings and gardens and designed landscapes can be obtained from www.PASTMAP.org.uk</p> | <p>Noted and taken into account within the description of the archaeology and cultural heritage environment within section 5.4.1 of Chapter 5.4 Archaeology and Cultural Heritage and Technical Appendix 5.4 A Transmission Work EIA: Baseline Review of Offshore and Onshore Archaeology.</p> | |
| <p>Marine Scotland (continued)</p> <p>* Data on scheduled monuments, listed buildings, Inventory gardens and designed landscapes, historic battlefields and properties in the care of Scottish Ministers can also be downloaded from Historic Scotland's Data Services website http://data.historic-scotland.gov.uk/pls/htmldb/f?p=2000:10:3234826639166657.</p> | | <p>Noted and taken into account within the description of the archaeology and cultural heritage environment within section 5.4.1 of Chapter 5.4 Archaeology and Cultural Heritage and Technical Appendix 5.4 A Transmission Work EIA: Baseline Review of Offshore and Onshore Archaeology.</p> |

| Organisation | Summary of Response | MORI Approach |
|--|---------------------|---------------|
| <p>9. Navigation</p> <p>The ES should include the following details on the possible impact on navigation for both commercial and recreational craft.</p> <ul style="list-style-type: none"> * Collision Risk * Navigational Safety * Visual intrusion and noise * Risk Management and Emergency response * Marking and lighting of Tidal Site and information to mariners * Effect on small craft navigational and communication equipment * Weather and risk to recreational craft which lose power and are drifting in adverse conditions * Evaluation of likely squeeze of small craft into routes of larger commercial vessels. <p>10. Ecology, Biodiversity and Nature Conservation</p> <ul style="list-style-type: none"> * Refer to Annex 1 for comments from advisors on ecology, biodiversity and nature conservation. | | |
| <p>Marine Scotland (continued)</p> | | Noted |

| Organisation | Summary of Response | MORI Approach |
|--|--|--------------------------------------|
| <u>Species</u> <p>The ES should show that the applicants have taken account of the relevant wildlife legislation and guidance, namely</p> <ul style="list-style-type: none"> * Marine (Scotland) Act 2010 * Marine and Coastal Access Act 2009 (as amended) * Council Directives 92/43/EES on The Conservation of Natural Habitats and of Wild Flora and Fauna * Conservation of Wild Birds (commonly known as the Habitats and Birds Directives) * Wildlife & Countryside Act 1981 * Nature Conservation (Scotland) Act 2004 * Wildlife and Natural Environment (Scotland) Act 2011 * Protection of Badgers Act 1992 * Conservation (Natural Habitats, &c.) Regulations 1994 * Conservation of Habitats and Species Regulations 2010 * Offshore Marine Conservation (Natural Habitats, &c) Regulations 2007 * Scottish Government Interim Guidance on European Protected Species * Development Sites and the Planning System and the Scottish Biodiversity Strategy and associated Implementation Plans <p>Marine Scotland (continued)</p> <ul style="list-style-type: none"> * In terms of The Scottish Government Interim Guidance, applicants must give serious consideration to/recognition of meeting the three fundamental tests set out in this Guidance. It may be worthwhile for applicants to give consideration to this immediately after the completion of the scoping exercise. | <p>The relevant wildlife legislation has been taken into account within the assessment of effects for the Biological Environment Disciplines (Chapter 4). Information on the Regulatory and Policy Context is also included within Chapter 1.2</p> | <p>Noted and taken into account.</p> |

| Organisation | Summary of Response | MORI Approach |
|--------------|---|--|
| | <p>* It needs to be categorically established which species are present on and near the site, and where, before the application is considered for consent. The presence of protected species such as Schedule 1 Birds or European Protected Species must be included and considered as part of the application process, not as an issue which can be considered at a later stage. Any consent given without due consideration to these species may breach European Directives with the possibility of consequential delays or the project being halted by the European Commission. Likewise the presence of species on Schedules 5 (animals) and 8 (plants) of the Wildlife & Countryside Act 1981 should be considered where there is a potential need for a licence under Section 16 of that Act.</p> <p>Marine Scotland (continued)</p> <p>11. Water Environment</p> <p>* The Scottish Environment Protection Agency (“SEPA”) encourages pre-application engagement to help the development process and to minimise risk of modifications later in the application process and avoidable delays or objections.</p> | <p>Surveys and desk studies have been used to inform the baseline characterisation of the environment as agreed with key stakeholders (information on the presence and distribution of protected species and Scheduled 5 and 8 of the Wildlife and Countryside Act 1981 have been considered within the relevant discipline chapters, i.e. Chapter 4.3 Marine Mammals, Chapter 4.4 Marine Ornithology and Chapter 4.6 Terrestrial Ecology).</p> <p>SEPA has been consulted pre-application and their advice taken into account within the relevant chapters (Chapter 3.1 Hydrodynamics, Sedimentary and Coastal Processes, Chapter 3.2 Hydrology, Geology and Contaminated Land and Chapter 4.6 Terrestrial Ecology).</p> <p>Noted and taken into account in the assessment of cumulative effects (see Chapter 1.3 Environmental Impact Assessment for a summary of the cumulative impact assessment approach followed).</p> |
| | | <p>* Information on energy proposals and issues that should be addressed in the ES can be found on the energy section of SEPA’s website at www.sepa.org.uk/planning/energy.aspx. The webpage also contains a link to the marine environment section of SEPA’s website which provides more specific guidance.</p> |

| Organisation | Summary of Response | MORI Approach |
|--------------|--|---|
| | <ul style="list-style-type: none"> * If the proposal includes both onshore and offshore components the applicant should be aware that the development may be subject to a range of different consenting regimes. SEPA is the regulatory body responsible for the implementation of the Controlled Activities Regulations (CAR). Further information specifically in relation to the water environment and SEPA's water related regulations can be found at: www.sepa.org.uk/water/water_publications.aspx and www.sepa.org.uk/water/water_regulation.aspx. * Developers are strongly advised at an early stage to consult with SEPA to identify 1) if a CAR licence is necessary and 2) clarify the extent of the information required by SEPA to assess fully any licence application. <p>Construction contractors may be unaware of the potential for impacts such as those listed below but, when proper consultation with the local fishery board is encouraged at an early stage, many of these issues can be averted or overcome.</p> <ul style="list-style-type: none"> * increases in silt and sediment loads resulting from construction works. * point source pollution incidents during construction. * obstruction to upstream and downstream migration both during and after construction. * disturbance of spawning beds during construction - timing of works is critical * drainage issues. * sea bed and land contamination | <p>SEPA consulted for advice on legislative EIA matters associated with the water environment.</p> <p>Noted.</p> <p>The Spey and Deveron District Salmon Fishery Boards were consulted as part of the scoping process for this application. Their comments were taken into account within the relevant chapter disciplines. Details of the consultation are set out in Table 4.6-1 of Chapter 4.6.</p> <p>The assessment of effects on private water supplies has been taken into account in Chapter 3.2 Hydrology, Geology and Contaminated Land. Mitigation measures have also been proposed (see section 3.2.2.43 of Chapter 3.2 for information on proposed mitigation measures).</p> |

| Organisation | Summary of Response | MORI Approach |
|--|--|---|
| <p>* Developers should also be aware of available Construction Industry Research and Information ("CIRIA") guidance on the control of water pollution from construction sites and environmental good practice (www.ciria.org). Design guidance is also available on river crossings and migratory fish (The Scottish Executive consultation paper, 2000) at www.scotland.gov.uk/consultations/transport/rcmf-00.asp.</p> | <p>Note and taken into account within Chapter 3.1 Hydrodynamics, Sedimentary and Coastal processes, Hydrology, Geology and Contaminated Land and Chapter 4.2 Fish and Shellfish Ecology.</p> <p>In relation to the OffI impacts on the road network are scoped out as the delivery of the OffI elements will be carried out by sea. In relation to the onshore elements of the TI baseline information has been collected through site and desktop studies. Information on traffic and transport is presented within Chapter 5.6 and in detail on Technical Appendices 5.6 A -D.</p> | <p>Note and taken into account within Chapter 5.6 Traffic and Transport.</p> |
| <p>12. Other Material Issues</p> <p><u>Traffic Management</u></p> <p>(continued)</p> <p>Marine Scotland</p> | <p>The ES should provide information relating to the preferred route options for delivering equipment etc. via the trunk road network. The EIA should also address access issues, particularly those impacting upon the trunk road network; in particular, potential stress points at junctions, approach roads, approach roads, borrow pits, bridges, site compound and batching areas etc.</p> | <p>Where potential environmental impacts have been fully investigated but found to be of little or no significance, it is sufficient to validate that part of the assessment by stating in the report:</p> <ul style="list-style-type: none"> * the work has been undertaken, e.g. transport assessment; * what this has shown i.e. what impact if any has been identified, and * why it is not significant? |

| Organisation | Summary of Response | MORI Approach |
|--|---|---------------|
| Marine Scotland (continued) <p>13. General ES Issues</p> <p>* In the application for consent the applicant should confirm whether any proposals made within the ES, e.g. for construction methods, mitigation, or decommissioning, form part of the application for consent.</p> | <p>Information regarding construction methods was included as part of the Marine Licence application and also within this ES within Chapter 2.2. The mitigations presented within this ES also from part of the Marine Licence application.</p> <p>A CD with the ES and associated planning application documents for the modified TI will be submitted to Marine Scotland (and key stakeholders as advised by Marine Scotland and Aberdeenshire Council) and will be made available within the Moray Offshore Renewables Ltd. Website.</p> <p><u>Consultation</u></p> <p>* Developers should be aware that the ES should also be submitted in a user-friendly PDF format which can be placed on The Scottish Government website. Developers are asked to issue ES directly to consultees. Consultee address lists can be obtained from MS.</p> | |

| Organisation | Summary of Response | MORL Approach | |
|---------------------------------------|--|---|---|
| Marine Scotland (continued) | <ul style="list-style-type: none"> * Where the developer has provided the Scottish Ministers with an ES, the developer must publish their proposals in accordance with Part 3 of the Marine Works (Environmental Impact Assessment) Regulations 2007 and as amended by the Marine Works (Environmental Impact Assessment) (Amendment) Regulations 2011. Licensing information and guidance, including the specific details of the adverts to be placed in the press, can be obtained from MS. | <p>MORL has elected to include the export cables (onshore and offshore) and OSPs in the EIA as they form an integral part of the Modified TI and therefore are a part of EIA development. It is MORL's view that the offshore transmission infrastructure (OTI) may also be subject to the requirement for an EIA under the Marine Works (Environmental Impact Assessment) Regulations 2007 (as amended) and so MORL have also followed these Regulations in the preparation of this EIA. The form of advertising has been discussed and agreed with Marine Scotland.</p> | <p>New requirement for Public Pre-Application Consultation</p> <ul style="list-style-type: none"> * From 6th April 2014, applications received for certain activities will be subject to a public pre-application consultation requirement. Activities affected will be large projects with the potential for significant impacts on the environment, local communities and other legitimate uses of the sea. The new requirement will allow those local communities, environmental groups and other interested parties to comment on a proposed development in its early stages - before an application for a marine licence is submitted. * Guidance on public pre-application consultation can be found at the following: http://www.scotland.gov.uk/Resource/0043/00439649.pdf <p><u>Gaelic Language</u></p> <ul style="list-style-type: none"> * Where applications are located in areas where Gaelic is spoken, developers are encouraged to adopt best practice by publicising the project details in both English and Gaelic. |

| Organisation | Summary of Response | MORI Approach |
|--|---|--|
| | <p><u>Ordnance Survey ("OS") Mapping Records</u></p> <p>* Developers are requested at application stage to submit a detailed OS plan showing the site boundary and all turbines, access tracks and onshore supporting infrastructure in a format compatible with The Scottish Governments Spatial Data Management Environment ("SDME"), along with appropriate metadata. The SDME is based around Oracle RDBMS and ESRI ArcSDE and all incoming data should be supplied in ESRI shape file format. The SDME also contains a metadata recording system based on the ISO template within ESRI ArcCatalog (agreed standard used by the Scottish Government); all metadata should be provided in this format.</p> | <p>A detailed OS plan with the Application Area (modified TI boundary) has been included as part of the Application documentation. This ES contains further plans (see Figures 1.1-1 to 1.1-6) and reflects the refined offshore export cable route corridor in line with MS-LOT's advice below that the EIA should reduce the degree of design flexibility required.</p> |
| Marine Scotland (continued) | <p><u>Difficulties in Compiling Additional Information</u></p> <p>* Developers are encouraged to outline their experiences or practical difficulties encountered when collating / recording further information supporting the application. An explanation of any necessary information not included in the ES should be provided, complete with an indication of when an addendum will be submitted. It should be noted that submission of an addendum will increase the time taken to determine an application. Any addendum will be subject to the same advertising and consultation as the original ES.</p> | <p>Information on information collated to support the assessments has been presented within each discipline chapter together with an indication of practical difficulties encountered when collecting information. All assessments have been undertaken using a precautionary principle particularly when data gaps have been encountered. Robust assessments have been presented.</p> |
| | <u>Application and ES</u> | <p>The checklist provided has been used to support the compilation of all information required to support the current application.</p> |

| Organisation | Summary of Response | MORL Approach |
|--|--|---|
| <u>Consent Timescale and Application Quality</u> <ul style="list-style-type: none"> * Developers are advised to consider all aspects of this scoping opinion when preparing a formal application to reduce the need to submit further information in support of your application. The developer, in accordance with section 13 (3) of the EA Regulations, must ensure that the ES contains all of the information specified in the scoping opinion, unless agreed with MS. The consultee comments presented in this opinion are designed to offer an opportunity to consider all material issues relating to the development proposals. | <ul style="list-style-type: none"> * Upon receipt, the licensing authority will use the enclosed checklist and scoping opinion in assessing the quality and suitability of the application in the gate check process. Developers are encouraged to seek advice on the contents of ES prior to applications being submitted, although this process does not involve a full analysis of the proposals. In the event of an application being void of essential information, the licensing authority reserves the right not to accept the application. Developers are advised not to publicise applications in the local or national press, until their application has been accepted by the licensing authority. | <p>All scoping responses received have been taken into account within the relevant disciplines. This table presents a summary of how the stakeholder responses have been taken into account within the assessments presented in this ES ('MORL Approach').</p> |
| Marine Scotland (continued) | <ul style="list-style-type: none"> * Under the Marine Licensing Appeals (Scotland) Regulations 2011, a person who has applied for a marine licence may by summary application, appeal to the sheriff of any sheriffdom against a decision taken by the licensing authority under section 29 (1) of the Marine (Scotland) Act 2010, or section 71 (1) of the Marine and Coastal Access Act 2009. | <p>Consultation with licensing authorities (MS-LOT for the offshore elements of this application and Aberdeenshire Council for the onshore elements) has been undertaken to inform the level of information required for the application.</p> <p>Information on the Project Description is provided within Chapter 2.2 respectively. The assessments of effects have used the parameters within the Rochdale Envelope which would result in the greatest potential effects. The rationale for the selection of 'worst case scenario' has been described within each discipline chapter.</p> |

| Organisation | Summary of Response | MORL Approach |
|--------------------------------|---|--|
| | <ul style="list-style-type: none"> * Failure to give such consideration or a major change to a parameter outside those considered may invalidate the ES submitted, requiring the marine licence consultation process to be repeated. Considering the tight timelines associated with the requirement for issue of a marine licence on this project, no cause for repetition can be afforded. It is expected that the EIA will reduce the degree of design flexibility required and that the ES provided for consent will be further refined as a condition of consent to be finalised in a construction statement, at least 6 months before construction commences. Information regarding the impacts from construction of the infrastructure and the types of vessels to be used will be required in the construction statement. * The ES will have to go through the gate check process as it has to be considered in proportion to other projects of a similar type. MS LOT offers a Gate Check prior to formal submission of applications and advises MORL to take full advantage of this service. The gate check is not designed as an in depth evaluation of the content of an ES. However it will allow MS LOT the confidence that minimum legislative requirements have been met prior to formal submission of the ES. To assist the gate check process, a thorough gap analysis of the issues listed here by MS LOT and the consultee comments that follow, should be drawn up by MORL for submission with the ES. | <p>Noted. The EIA is presented on the basis of a refined offshore export cable route corridor with a reduced width where it runs from the southern boundary of the MacColl wind farm to a single landfall point at Inverboyndie (see Figure 1.1-4).</p> <p>Noted. This table provides a thorough gap analysis.</p> |
| Marine Scotland (continued) | <ul style="list-style-type: none"> * The ES must show a map of the cable route showing the exact positions where the cable is to be buried, unburied and what physical protection is proposed before MS LOT will issue any marine licence. MS LOT reiterates the need for early discussions and the need for the aforementioned information to be provided in support of the marine licence application. If MORL do not provide the detailed seabed information for the route in time for the consultation on the marine licence application, then objections will likely be raised and that the time taken to resolve any differences will delay any issue of any marine licence. | <p>Figure 1.1-4 of the ES shows the modified Offshore Cable route for which a Marine Licence is being sought. Information on the geophysical and geotechnical conditions along the offshore export cable route is not available at the time of this application. Nevertheless surveys are currently being undertaken and the results will be used to inform the length of the cable which will likely need to be protected. This information will be provided to Marine Scotland post-application.</p> |
| | <ul style="list-style-type: none"> * This project may require capital dredging, and if so an amendment to the application submitted on 4th April 2014 will be required. The dredged material will require to be chemically analysed to ensure that it is suitable for sea disposal. Guidance on pre-dredge sampling, along with the Action Levels MS use to determine suitability for sea disposal can be obtained upon request from MS LOT. | <p>No dredging will be required as part of this application.</p> |

| Organisation | Summary of Response | MORL Approach |
|--------------------------------|--|---|
| Marine Scotland (continued) | <ul style="list-style-type: none"> * Please be aware that, dredging of harbours and disposal of spoils, and the removal of aggregates, are two separate activities entirely and should not be confused as on page 125 of the Scoping Report. Dredging in the quoted context and sea disposal are activities associated with the periodic removal of material from harbours. Aggregate dredging is a completely separate industry. Should dredging be required for the OSPs, MORL must identify suitable sites for dredge spoil (surplus and unsuitable material). MORL must provide a list of all the existing sea disposal sites in the Moray Firth, on a single admiralty chart showing the quantities deposited at each site for each year for the last ten years. | <p>No dredging will be required as part of this application.</p> <p>Information on suspended sediments modelling has been presented in Chapter 3.1 Hydrodynamics, Sedimentary and Coastal Processes and Technical Appendix 3.1 A Hydrodynamics, Sedimentary and Coastal Processes.</p> |
| | <ul style="list-style-type: none"> * Regardless of the method of installation used for the transmission cables from the OSPs to the landfall point, modelling of sediment release, as a result of the burial process, will be required. | <p>Chapter 5.7 Other Human Activities presents information on the risk of encountering UXO and the measures which will be followed to minimise the risk.</p> <p>* The ES must include what measures are proposed to be in place to do a pre-sweep for Unexploded Ordnance ("UXO's"). If discovered, the time it takes to remove such an object may have detrimental effects on the project timelines. This is of particular importance as the cable route passes through a firing practice area. MS.LOT recommend that MORL engage with the Ministry of Defence on this matter.</p> |

| Organisation | Summary of Response | MORL Approach |
|--|---|---|
| | <p>* MORL must include in the ES a Reporting Protocol which sets out what the developer must do on discovering any marine archaeology during the construction, operation, maintenance and monitoring of the proposed transmission infrastructure.</p> | <p>MORL has committed to prepare a Written Scheme of Investigation (WSI) and follow a Protocol for Archaeology Discoveries (PAD) as part of measures to mitigate risk of effects on archaeology and cultural heritage features (see Chapter 5.4 Archaeology and Cultural Heritage). An example of a WSI and PAD have been included within the MORL ES, 2012 (Technical Appendix 1.3 A Environmental Management Plan) which has been referred to in this ES in Chapter 5.4.</p> |
| Marine Scotland (continued) | <p>The cable landfall methodologies under consideration have been discussed with Aberdeenshire Council and are consistent with those methodologies proposed and consented for the original offshore transmission infrastructure. These are described in detail within Chapter 2.2 Project Description.</p> <p>* The cable landfall point methodologies must be detailed in the ES, i.e. cable trenching or horizontal directional drilling ("HDD"), to name a few. MS LOT recommend the developer hold discussions with the local council (Aberdeenshire), the SNCBs and MSS to establish best options and any major consenting issues that may arise. These can be hosted by MS-LOT if required.</p> | <p>MORL engagement strategy with stakeholders is presented within Chapter 1.4. Specific discussions on fisheries have also been included within Chapter 5.1 Commercial Fisheries.</p> <p>* It is critical that MORL set up a meeting post scoping to engage with statutory consultees including stakeholders such as the SFF to run through the various scenarios which would include, but not be restricted to: cable envelope surveys, trenching and non-trenching options, post lay mitigation measures to reduce snagging hazards, dredging activity, scour protection and impact protection, long-term cable envelope monitoring programme, appointing Ecological Clerk of Works ("ECoW's) and Fisheries Liaison Officers ("FLO's").</p> |

| Organisation | Summary of Response | MORL Approach |
|--|---|---|
| | <ul style="list-style-type: none"> * MORL must ensure the safety of navigation is not compromised by the works. The navigable depth must not be altered by more than 5% of stated chart datum unless otherwise agreed, in writing, with MS, the Maritime Coastguard Agency ("MCA") and NLB. A Navigational Risk Assessment ("NRA") will be required for any location likely to infringe on the 5% threshold. | <p>Navigational safety is assessed in Chapter 5.2 (Shipping and Navigation). No significant effects on navigable depth are predicted, and this will be further assessed by a final Navigational Risk Assessment and cable burial index study on the finalised route within the corridor.</p> |
| Marine Scotland (continued) | <ul style="list-style-type: none"> * MS LOT requires clarification on the additional Data Sources listed on page 115. Do MORL mean the Marine Scotland District Fisheries Inspectors to be Marine Scotland Compliance? MS LOT suggest additional data sources as Scottish Renewables and the Scottish Salmon Netting Association. Care should be given to include any local harbour authorities. | <p>Marine Scotland Compliance should have been stated, in place of Marine Scotland District Fisheries Inspectors. Data has also been collected in relation to salmon netting locations in the area.</p> |
| | | <p>MORL acknowledges that an EPS Licence may be required during the construction phase of the modified Offshore wind farm and has referred to the information presented within Technical Appendix 7.3 H (EPS Assessment: Supplementary Information) of the MORL ES, 2012 to support the assessment presented within Chapter 4.3 Marine Mammals.</p> |

| Organisation | Summary of Response | MORL Approach |
|--------------|---|---|
| | <p>* MS LOT require the developer to be aware of proposed new Marine Protected Areas ('MPAs') located nearby the proposed development area and take account of possible impacts on these within the EIA process and ES itself. MORL should be aware of the nearest search locations.</p> <p>MARINE SCOTLAND (continued)</p> | <p>MORL is aware of the proposed MPAs and also the MPA Search Area within the Moray Firth. The assessments have been carried out including the features which may be MPA designating features (e.g. minke whale was assessed as a key species within the marine mammal assessment Chapter 4.3).</p> <p>The assessment presented within Chapter 4.3 Marine Mammals has taken into account the results of piling noise modelling for the OSPs and for the MORL and BOWL consented wind farms. The assessments have been carried out taking into account potential cumulative effects with projects within the Moray Firth and further afield as detailed within section 4.3.3 cumulative impact assessment.</p> |
| | <p>* Piling noise should be modelled for the OSPs and assessed in combination with all other developments in the Moray Firth, and perhaps further afield. Discussions with MS LOT, the SNCBs and MORL will take place as soon as possible to determine the relevant projects.</p> | <p>Potential effects (including a Habitats Regulations Appraisal on the River Spey SAC) on diadromous fish are assessed in Chapter 4.2 (Fish and Shellfish Ecology). It should be noted that following refinement of the offshore export cable route corridor that the export cable landfall is proposed at Inverboyndie (see figure 1.1.4).</p> |
| | | |

| Organisation | Summary of Response | MORL Approach |
|--------------------------------|---|---|
| | <ul style="list-style-type: none"> * The ES must include some calculations to demonstrate the degree of alteration of natural electromagnetic fields ("EMF") that would be caused by the cables. MS-LOT require MORL to model EMF under operational and shutdown conditions and relate this to fauna. This may have an effect on marine species directly (impact on species itself) or indirectly (impact on prey). Modelling the EMF will involve knowing the current in the cables, the degree of shielding inherent in the cable, the depth of burial and/or armouring, and the consequential alteration to natural fields at the sediment surface and in the water column. The predicted changes to fields should then be compared with what is known about sensitivity of mammals and fish to EMF. A cumulative consideration of other cables in the Moray Firth should be completed. | <p>Potential effects of EMF on benthic, marine mammal, fish and shelffish ecology have been assessed in the ES (Chapters 4.1 to 4.3), including calculations of worst-case EMF levels. No significant effects are predicted. Each chapter also includes a cumulative impact assessment.</p> |
| | <ul style="list-style-type: none"> * On review of the Cumulative and In-combination Impacts assessment (page 34), consideration of the projects under the National Renewables Infrastructure Plan will be required. Please add the projects of Nigg, Invergordon and Ardersier to the list. | <p>The cumulative impact assessment approach followed within the ES is summarised within Chapter 1.3 Environmental Impact Assessment, including a list of the projects considered for cumulative assessment (which include Nigg, Invergordon and Ardersier).</p> |
| Marine Scotland (continued) | <ul style="list-style-type: none"> * MS LOT recommend that the applicant checks for Annex 1 habitats and Priority Marine Features ("PMF") during survey work as well as any Biodiversity Action Plan ("BAP") habitats and species. | <p>Annex 1 Habitats, PMF and BAP habitats and species have been considered within the Benthic Ecology assessment (see section 4.1.1 of Chapter 4.1 Benthic Ecology and Technical Appendix 4.1 A Subtidal Ecology Characterisation for details on benthic survey results).</p> |

| Organisation | Summary of Response | MORL Approach |
|--|---|---|
| 1. Fish Ecology and Commercial fisheries | <p>(i) Fish and Shellfish Ecology</p> <p>Sandeels</p> <ul style="list-style-type: none"> * Sandeel populations tend to be patchy in nature due to the reliance on a specific range of sediment. There are patches of sandeels present in and around the site and there is a strong possibility that there may be patches of sandeels along the cable route. Providing a patch is not completely within the cable route, there should be the opportunity for re-colonisation post disturbance. There may be some localised disturbance and suspended sedimentation but this should be limited due to the sediments involved. <p>Herring</p> <ul style="list-style-type: none"> * It would be preferable to avoid works during the herring spawning period if possible (Aug-Sep). This becomes more of an issue towards the land fall end of the route where sediments become more suitable for herring spawning and this area is known to be important North East spawning ground. Not only are herring sensitive to disturbance from noise but their eggs and larvae may also be sensitive to noise. <p>Cod</p> <ul style="list-style-type: none"> * The Moray Firth has a genetically distinct population of Cod. Little is known of the precise location of spawning grounds within the Firth but it is known that cod vocalize in spawning aggregations (key period is between Feb-Mar). The frequency range of these vocalisations is between 30-250 Hz and can travel 200-500m from the source. Additional cod spawning surveys recently undertaken by the developers in the Moray Firth should be used to inform this process. <p>(ii) Commercial Fisheries</p> <ul style="list-style-type: none"> * There are substantial locally important shellfish fisheries for brown crab and lobster. These predominantly consist of small vessels (<15m in length) that do not have VMS aboard. However, ScotMap project should be used as primary source of information on the potential overlap of the spatial distribution of smaller vessels with the proposed site. In general, these vessels work mainly between 0-6 nm from the shore. There is a very active small boat fleet working in the area mainly potting, but also an active summer handline fishery for mackerel. Please visit for more information and access to spatial layers: http://www.scotland.gov.uk/topics/marine/science/MISinteractive/Themes/ScotMap | <p>Potential effects on sandeels are assessed in Chapter 4.2 (Fish and Shellfish Ecology). Any effects are temporary during construction and are not assessed to be significant.</p> <p>The effects of suspended sediment concentrations on herring are assessed in Chapter 4.2 (Fish and Shellfish Ecology). Minor, not significant effects are predicted on spawning herring, their larvae and eggs.</p> <p>MORL undertook cod spawning surveys in spring, 2013, and these have informed the assessment of potential effects on cod (Chapter 4.2, Fish and Shellfish Ecology).</p> <p>ScotMap data was included in Technical Appendix 5.1 A (Commercial Fisheries) to aid in establishing a coherent baseline upon which a robust assessment of potential effects can be made. Creelers and mackerel hand-line fisheries have both been assessed within Chapter 5.1 (Commercial Fisheries).</p> |

| Organisation | Summary of Response | MORL Approach |
|---|---|--|
| <ul style="list-style-type: none"> * VMS vessel fishery data indicates the key target species as Nephrops, (mainly in the eastern part of the Firth), scallops (both closer to the shore and within the development) and some demersal whitefish species (further offshore). There is an increasing importance of squid in the Moray Firth as there are fewer restrictions on vessels targeting this species. As a result more vessels have been moving to target squid seasonally to alleviate pressure on other stocks and save days at sea for other TAC species. | <p>The commercial fisheries for Nephrops, scallops, demersal whitefish and squid have all been assessed separately for relevant effects.</p> | <p>Contact has been made and is ongoing with all relevant fisheries stakeholders including fisheries offices and directly with fishermen. See Technical Report 5.2 A: Commercial Fisheries for a list of consultees. In addition meetings have taken place with District Salmon Fisheries Boards within the Moray Firth including in particular the Spey and Deveron District Salmon Fisheries Boards (see Chapters 4.2 Fish and Shellfish Ecology and Terrestrial Ecology).</p> |
| <p>Marine Scotland Science (MSS) (continued)</p> | <ul style="list-style-type: none"> * It would be worth ensuring good contact is made and consultation maintained with fisheries representatives in the area. This is especially important for the non-VMS vessels which are not represented by the VMS data plots. Points of contact other than the SFF, may include local fishery offices and the inshore fisheries group coordinator for the Moray Firth. | <p>FIRs have been appointed through the SFF. Brown and May currently act as the Fisheries Liaison Officer for MORL.</p> |
| | <p>(ii) Liasing with the Fishing Industry</p> <p>It is acknowledged that the developers have already seek to liaise with the fishing industry through Moray Firth Offshore Wind Developers Group ("MFOWDG"). Additionally, please consider appointing a Company Fishing Liaison Officer to act as the primary point of contact for the fishing industry. In addition, it is advised to establish Fishing Industry representative(s) to act as a single onshore trusted contact point within the fishing community. The developer may consider a dedicated International Maritime Mobile VHF working channel for the exchange of relevant information between contractors afloat and other vessels in the area during construction and maintenance.</p> | |

| Organisation | Summary of Response | MORL Approach |
|---|---|--|
| <p>Marine Scotland Science (MSS) (continued)</p> <p>(iv) Section specific comments</p> <p>Section 2</p> <ul style="list-style-type: none"> * Section 2.2.1, p. 20, §7: It is stated that 2 landfall location (Inverboyndie and Sandend) are considered the preferred options with minimal impact on the environment and the shortest overall cable route. This should change to "... relatively lower environmental impact when compared to the rest of the options". * Section 2.3.2, p. 28, §1: Proposed Transmission Cable Infrastructure comprise up to four submarine HVAC export cables in up to four separate trenches separated by four times the water depth apart. The overall footprint of the export cable might cause significant interactions with the fisheries in the area (see overall comments comments) especially during construction. Early engagement with the fishing industry is advised. Additional details (duration, installation methodology, local requirements of additional cable protection etc.) on the export cables installation plan should be made available and the plan should be consulted within MFOWDG – Commercial Fisheries Group to avoid cumulative impacts on fisheries from surrounding developments. | <p>All the above recommendation will facilitate efficient dissemination of information from the developer to the fishing community and vice versa, in a timely and all-inclusive manner. The developer may consider developing a Fisheries Liaison Plan which will include mitigation and coexistence plan. Please see more at the guidance produced by COWRIE on options for the mitigation of impacts of offshore wind farms on fishing activities. MSS would expect to see a specific chapter in the stakeholder section where potential concerns of the fishing community raised during consultation have been addressed.</p> | <p>Mitigation has been proposed in this ES and the original ES. MORL have also committed to partaking in the Moray Offshore Commercial Fisheries Working Group which will discuss mitigation methods relevant to commercial fisheries interests. Further MORL has submitted to MS-LOT a draft Commercial Fisheries Mitigation Strategy which was agreed with the SFF as part of the post-application consultation for the wind farms and original Offshore applications.</p> |
| | | <p>Noted. It is confirmed that Inverboyndie has been selected as the export cable landfall location.</p> <p>Noted. Engagement with the Commercial Fisheries has taken place and will be ongoing.</p> |

| Organisation | Summary of Response | MORL Approach |
|---|--|--|
| | <p>* Section 2.3.3, p. 28, §1: The proposed target burial depth is 1 metre. In cases where this burial depth cannot be achieved, additional protection has been suggested. Potential options include rock placement or concrete mattressing. SFF has advised rock placement to be a favourable option in the past. However, this is less effective and increased gear interaction potential with the high intensity Scallop dredging in the Moray Firth.</p> | <p>Cable protection methods, where target burial depth cannot be achieved, have been included as mitigation methods within Chapter 5.1: Commercial Fisheries.</p> <p>The type of protection will be discussed with the authorities and stakeholders once the extent and location of protection is known.</p> |
| Section 5 Marine Scotland Science (MSS) (continued) | <p>* Section 5.2.3, p.81, Table 5-1: Green colour has been used for unknown intensity of spawning/ nursery grounds. You might want to consider replacing this colour as one might assume it suggests a positive interaction instead of spatial overlap.</p> | <p>Noted.</p> <p>Chapter 4.2 Fish and Shellfish Ecology assesses the effects on sandeels. Figure 4.3-13 and Technical Appendix 4.3 C Sandeel Survey in the MORL ES (2012) provide further details.</p> |
| | <p>* Section 5.3.1, p.115, §1: Additional sources to provide information on the existing human environment may include local Inshore Fisheries Group.</p> | <p>The local Inshore Fisheries Group was consulted for the original ES and consent application. For the modified OIFI, consultations were held with the fishermen themselves, and MORL has discussed the proposals with the North & Moray Firth Inshore Fisheries Group.</p> |

| Organisation | Summary of Response | MORI Approach |
|--|---|--|
| | <ul style="list-style-type: none"> * Section 5.3.2, p.115, §1: Fisheries baseline assessment was based on relatively old data (2000-2009) on a coarse scale (ICES rectangle). MSS commercial fishing landings distribution maps relate to data from 2007-2011. MS may provide more up to date datasets in a greater scale for a more informed baseline assessment. | Maps provided by MSS have been used to prepare the commercial fisheries baseline and are presented in Technical Appendix 5.1 A: Commercial Fisheries. |
| Marine Scotland Science (MSS) (continued) | <ul style="list-style-type: none"> * Section 5.3.2, p.115, §2: Although developers have identified ScotMap project as a potential data source in Section 5.3.1., baseline assessment of vessels under 15 m is very limited. Overlapping the development (including export cabling) with ScotMap layers is advised. * Section 5.3.2, p.115, §3: Sentence "As a result of vessels under 15 m not currently being required to be monitored, the activity of this fleet may not be represented" should be replaced with "... is not represented". | ScotMap data was included in Technical Appendix 5.1 A (Commercial Fisheries) to aid in establishing a coherent baseline upon which a robust assessment of potential effects can be made. |
| | <ul style="list-style-type: none"> * Section 5.3.2, p.115, §4: Please provide a table with landings breakdowns for both ICES rectangles. | <p>Amended wording has been used in the Technical Appendix 5.1 A: Commercial Fisheries, section 3.4.1.</p> <p>Figures 5.7-5.10 and Tables 3 and 4 within Technical Appendix 5.1 A: Commercial Fisheries show the landing breakdowns for the two ICES rectangles.</p> |
| | <ul style="list-style-type: none"> * Section 5.3.2, p.114, Effects Description Table: Displacement of fishing activities during construction should also be scoped in and discussed in the site-specific impact assessment methodology as part of the general effect of "Interference with fisheries activities". | Displacement of fishing activities has been considered as a separate effect within both the EA and CIA for commercial fisheries (Chapter 5.1). |

| Organisation | Summary of Response | MORL Approach |
|--|--|--|
| | <p>* Section 5.3.2, p.118, §5: Proposed potential mitigation measures include cable burial where possible, additional cable protection measures where burial is not possible, consultation with the industry and ensuring integrity of the offshore export cable and fishing activities post-installation. You may consider co-existence options with the fishing sector e.g. fishing vessels could provide guard vessel services, or service boats for periodic overhauls (visual inspection and surveillance purposes).</p> <p>(v) Additional guidance references and data sources</p> <ul style="list-style-type: none"> * Section 5.3.2, p.118, §1: Check The Fishing Liaison with Offshore Wind and Wet Renewables Group ("FLOWW") website for a copy of "FLOWW Best Practice Guidance for Offshore Renewables Developments: Recommendations for Fisheries Liaison" - http://www.thecrownestate.co.uk/energy-infrastructure/offshore-wind-energy/working-with-us/floww/ * Subsea Cables UK guidance on overlaps with fishing - http://www.subseacablesuk.org.uk/guidelines/ * Additional guidance Sealfish's Best Practice Guidance for Fishing Industry Financial and Economic Impact Assessments provides methods for calculating financial impacts as a result of areas closed or restricted for fishing: http://www.sealfish.org/media/634910/ukfen%20a%20best%20practice%20guidance.pdf * The KIS-ORCA interactive map of OREIs and subsea cables: http://www.kis-orca.eu/map * Visit MS Interactive website to get access to spatial data held by MS – http://www.scotland.gov.uk/Topics/marine/science/MSinteractive <p>2. Freshwater Fish Planning</p> <ul style="list-style-type: none"> * There are currently no aquaculture sites registered with MSS located in the vicinity of the development proposed by Moray Offshore Renewables Ltd. (see map below). | <p>Whilst not assessed within this ES, MORL is in ongoing discussions with the fishing industry, primarily through the SFF, regarding opportunities for the industry in the construction and operation phases of the project. This is addressed in the Draft Commercial Fisheries Mitigation Strategy submitted to MS-LOT as outlined previously. This is also addressed in the Moray Firth Commercial Fisheries Working Group.</p> <p>These have been noted and listed in section 5.1.1.17 of Chapter 5.1 : Commercial Fisheries where they have been used.</p> |
| Marine Scotland Science (MSS) (continued) | | No action required. |

| Organisation | Summary of Response | MORI Approach |
|--|--|--|
| | <ul style="list-style-type: none"> * The nearest aquaculture site is situated ~24 km west of the proposed development. It is a wild mussel site, currently active and operated by Highland Council. | No action required. |
| 3. Diadromous Fish and Associated Fisheries | <p>* This is an application for a modified offshore transmission infrastructure for a wind farm which has been consented. The modification is to allow a different export cable route and landfall but the issues to consider and the general principles of risk assessment remain the same, as were considered in connection with the previous application. MSS would therefore hope that the new EIA can as far as possible use information that was submitted previously, updated where necessary.</p> | <p>Effects on fish are assessed in Chapter 4.2 (Fish and Shellfish Ecology) and Chapter 4.6 (Terrestrial Ecology). There are no salmon net fisheries in the immediate area, but net fisheries in the wider vicinity have been identified. Consultation has been undertaken with the Deveron and Spey District Salmon Fishery Boards and the Deveron, Bogie and Isla Rivers Charitable Trust (see Table 4.6-1).</p> |
| Marine Scotland Science (MSS) (continued) | <p>* The main change requiring consideration in relation to diadromous fish and associated fisheries is that the landfall is now likely to be in Boyndie Bay which lies immediately to the west of the mouth of the River Deveron, an important salmon and sea trout river, or Sandend Bay, further to the west, rather than at Fraserburgh beach. As at the previously proposed landfall site, large numbers of salmon and sea trout will be expected to be present at times at these new potential landfall locations too, and suitable precautions will need considered as previously. Any salmon and sea trout net fisheries close to the new proposed landfalls will also need identified and consulted with. Boyndie Bay is in the Deveron Salmon District and Sandend Bay in the Spey Salmon District so the Deveron and Spey District Salmon Fishery Boards will need to be consulted.</p> | <p>Sediment grab sampling was undertaken in line with MSS's recommendations (see Technical Appendix 4.1A Subtidal Ecology Characterisation, section 2 for survey details).</p> |
| 4. Benthos | <p>Page 75, Impact Assessment Methodology</p> <p>* None of the proposed assessment methods along cable routes seem to include grab sampling. This should be undertaken to assess the populations of infaunal species such as <i>Arctica islandica</i> and <i>Maera loveni</i>. Given that the cable corridor might be up to 1.6 km wide MSS suggest that grab sampling should be considered.</p> | |

| Organisation | Summary of Response | MORI Approach |
|--|--|--|
| Marine Scotland Science (MSS) (continued) | <p>Page 95- Intertidal Benthic Ecology</p> <ul style="list-style-type: none"> * There is no mention of assessing the infaunal populations of soft sediments (beaches) - core or quadrat sampling perhaps. Also, it would be useful to monitor possible changes in beach dynamics caused by cable laying activities - beach profiles and PSA for example. Are there any algal or marine plant beds in the vicinity of the cable landfalls? | <p>Intertidal surveys were carried out using INCC procedural guidelines 3-1 (modified phase 1 habitat mapping). In addition dig overs were carried out from which subtract conditions were noted and key species identified as agreed with MSS (see Technical Appendix 4.5 A Intertidal Ecology Characterisation and Chapter 4.5 Intertidal Ecology for more details).</p> |
| Local Authority | <p>5. Marine Planning and Analysis</p> <ul style="list-style-type: none"> * The socio-economic aspects of this scoping report are largely satisfactory. In summary, MSS would expect the EIA to include the gross and net employment impacts, and the gross and net GVA impacts. Both of these should be presented separately for the construction, Operation and Maintenance and Decommissioning phases. They should also be reported at a range of appropriate geographic scales. To assist with that, it would be helpful to see a clear definition of the labour market catchment area. Background into on the industry structure and employment structure would be useful. Clear consideration and use of the concepts of additioanality, displacement and leakage should also be demonstrated. The same would be required regarding economic multipliers. <p>1. Highland Council</p> <ul style="list-style-type: none"> * The HC made no comments on the scoping report for the Modified transmission Infrastructure. <p>2. Aberdeenshire Council</p> <ul style="list-style-type: none"> * AC are generally content with the scope of the assessment, the environmental effects identified and the significant effects to be scoped in. Overall, it appears to cover the main environmental impacts and proposed accepted methodology. | <p>Results of the economic assessments are presented as the gross employment and GVA supported by the investment. Displacement, leakage and multipliers are discussed in the Economic Impact Assessment Section 5.5.2 of Chapter 5.5 Socio-Economics. Data on the labour market structure is included in the baseline information 5.5.1 of Chapter 5.5.</p> |

| Organisation | Summary of Response | MORL Approach |
|--|--|---|
| Local Authority (continued) | * The AC Natural heritage team raised no issues in terms of their particular area of interest, considering that the scoping report is comprehensive and acceptable. | No action required. |
| Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) | <p>* There are a number of cables being proposed in the Moray Firth, including the Caithness / Moray subsea cable link, export cables for the Beatrice Offshore Wind Farm as well as these export cable(s) for the MORL Round 3 wind farms. The SNCBs continue to recommend liaison between the various parties involved to try and take a more strategic approach to planning this work, including cable-laying and associated construction activity.</p> | <p>Liaison with BOWL takes place on a regular basis through the Moray Firth Offshore Wind Developers Group led by The Crown Estate and joint participation in the Moray Firth Commercial Fisheries Working Group. MORL meets with SHE-T on a monthly basis and is provided updates on the Caithness/Moray subsea cable link (referred to in this ES as "SHE-T Offshore HVDC reinforcement") as appropriate.</p> |

| Organisation | Summary of Response | MORI Approach |
|---|---|---------------|
| <p>1. Technical Information on Offshore Export Cable</p> <p>* For the updated transmission works, the applicant confirms that an AC connection will be used (see section 2.3.2 of the scoping report). Four offshore export cables will be installed with a distance between them of four times the water depth (section 2.3.3). The SNCBs would welcome a detailed description of the route options (including proposed landfall) and construction phasing for these cables in order to reduce any potential impacts on sensitive habitats and species. This includes confirmed information on the following technical aspects, to be submitted in any ES supporting the marine licence application for the works:</p> <ul style="list-style-type: none"> (1) Method of cable-laying and burial (letting or ploughing?). (2) Installation method for cable landfall (trenching or directional drill?). (3) Footprint of the area affected by the operations (i.e. cable laying and cable protection). (4) Method and quantity of cable protection, if required (such as rock armouring or concrete mattresses). (5) Duration, rate and timings of cable-laying. (6) Direction of cable-laying (offshore in or inshore out?). (7) Number and types of vessels (including propulsion systems) to be used in cable-laying operations. (8) Estimation of electromagnetic fields ("EMF") potentially arising from cables both at exterior of cables and at surface of seabed above buried cables. (9) Estimation of noise emissions from cable-laying works. (10) Anticipated lifespan of the export cables in this location. <p>* The SNCBs recommend that this technical information is included in any application for the offshore transmission works (in preference to use of a design envelope). The SNCBs would also welcome confirmed details on the location, design and installation methods for the offshore substation platform(s) – up to two are proposed.</p> | <p>Potential effects of EMF are included in the benthic, fish and shellfish and marine mammal assessments (Chapters 4.1 – 4.3).</p> <p>Due to the timescales of the project, a design envelope (Rochdale Envelope) approach has been used, but has been narrowed as far as possible at this stage and all assessments assess a worst-case scenario.</p> <p>As such, detailed information will only be available after detailed design has taken place much closer to construction. Detailed information will be addressed in the Construction Method Statement/ Vessel Management Plan/ Environmental Management Plan/ Cable Plan (as appropriate) which will be submitted to MS-LOT for approval prior to construction.</p> <p>* The SNCBs refer to sections 5.1.2 and 5.1.6 of the scoping report addressing 'Physical Environment (Offshore)' and 'Physical Environment (Onshore)', respectively. The SNCBs agree with the aspects 'scoped in' and 'scoped out' for the offshore assessment as set out on pages 45-47 of the scoping report.</p> | |

| Organisation | Summary of Response | MORL Approach |
|---|---|---|
| <p>Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued)</p> | <p>* The SNCBs consider it appropriate to focus attention on the two geological Sites of Special Scientific Interest ("SSSI") in the area - Cullen to Stake Ness Coast SSSI and Whitehills to Merrose Coast SSSI - adjacent to each of the potential landfall options at Sandend Bay and Boydrie Bay (p.55). The SNCBs advise that employing an experienced coastal geomorphologist will help in assessing the suitability of landfall options and in advising on detailed routing / micro-siting. The SNCBs would also welcome further discussion on these geological interests to help inform the development of cable routes and cable laying options.</p> | <p>The two geological sites have been included in the hydrodynamics, sedimentary and coastal processes impact assessments (Chapter 3.1) and in the onshore hydrology, geology and contaminated land assessments (Chapter 3.2). No significant effects are predicted on these sites.</p> <p>MORL will consult with the SNCBs as part of the development of the Cable Plan which will be submitted for MS-LOT's approval prior to construction once detailed routing/ micrositing and cable options are known.</p> <p>Smothering effects (from temporary increased suspended sediment concentration and sediment deposition associated with construction activities) and risk of seabed contamination are considered in Chapter 4.1 Benthic Ecology, section 4.1.2. No significant effects have been predicted.</p> |

| Organisation | Summary of Response | MORI Approach |
|--|--|---------------|
| <p>* Habitat loss: the applicant should consider loss of habitat once the technical aspects and proposed working methods have been confirmed (see section 1 above), and in the context of the biotopes recorded along the length of the cable route and at the proposed locations for offshore substation platforms.</p> | <p>Permanent habitat loss of key receptors (sand and gravel sediment habitats and communities and burrowed mud PMF habitat) has been considered in section 4.1.2 of Chapter 4.1 Benthic Ecology. No significant effects have been predicted.</p> | |
| <p>Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued)</p> | <p>Habitat loss has been considered using the worst case scenario of relevant Rochdale Envelope parameters (OSP footprint and cable route length) as described in Table 4.1-6 of Chapter 4.1 Benthic Ecology.</p> | |
| | <p>Habitat and associated community change (operational effects) has been considered in section 4.1.2 of Chapter 4.1 Benthic Ecology.</p> | |

- * Electromagnetic effects: the applicant will also need to consider the potential impacts on benthic communities from any thermal load or EMF arising from the cables during operation.

| Organisation | Summary of Response | MORI Approach |
|---|---|--|
| | <p>* It is also important to consider the indirect effects on other receptors (marine mammals and seabirds) if their prey species could be impacted by the offshore cable works.</p> | <p>Benthic ecology has been considered a key discipline within the assessment of indirect effects on Fish and Shelfish Ecology (Chapter 4.2), Marine Mammals (Chapter 4.3) and Marine Ornithology (Chapter 4.4). Inter-linkages between EIA disciplines have also been discussed in Chapter 1.3 Environmental Impact Assessment.</p> |
| Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued) | <p>* The scoping report provides a preliminary appraisal of available information on the baseline environment including consideration of Annex 1 habitats and Priority Marine Features. BAP habitats and species, and the OSPAR list of threatened species and habitats, should also be considered in the assessment.</p> | <p>Annex 1 habitats, priority marine features (PMF), BAP habitats and the OSPAR of threatened species have been considered within the benthic impact assessment (see Technical Appendix 4.1 A Subtidal Ecology Characterisation, section 3.2 for details of features of conservation interest).</p> |
| | | <p>* DDV and grab sampling using a 0.1 m² Day Grab were used to survey the seabed benthic features as agreed with MSS (see Technical Appendix 4.1 A Subtidal Ecology Characterisation, section 2 for Survey design details). No Annex 1 habitats were identified within the modified offshore export cable route.</p> |

| Organisation | Summary of Response | MORL Approach |
|--|--|---------------|
| <p>Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued)</p> <p>* The SNCBs presume that location of the substation(s) can be informed by the geophysical, geotechnical and benthic survey work already completed, or planned, for the MORL Eastern Development Area.</p> <p>* The SNCBs refer to section 5.2.3 in the scoping report on 'Fish & Shellfish Ecology'. MS can advise whether the proposed benthic survey work and studies are sufficient to provide supplementary data on fish and shellfish, particularly herring and sandeels, and whether any targeted surveys are required for these interests.</p> | <p>Geophysical and geotechnical data, as well as results from the benthic surveys carried out in 2010 to inform the now consented Telford, Stevenson, and MacColl Wind Farms has been used to inform the impact assessment of the modified Offshore Wind Farm (OOff). Additional surveys are being carried out in 2014 to assist in the design of the three MORL consented wind farms and associated transmission infrastructure (including the location of the OSPs). No significant effects are assessed in relation to the OSPs and this ES assesses siting of the OSPs within the three consented wind farms.</p> <p>Prior to being undertaken the scope of the benthic surveys was agreed with MSS. Results from the benthic studies (particularly particle size distribution) are included in the assessments within the Fish and Shellfish Ecology chapter (Chapter 4.2).</p> | |
| | <p>4. Fish and Shellfish</p> <p>* The SNCBs refer to section 5.2.3 in the scoping report on 'Fish & Shellfish Ecology'. MS can advise whether the proposed benthic survey work and studies are sufficient to provide supplementary data on fish and shellfish, particularly herring and sandeels, and whether any targeted surveys are required for these interests.</p> | |

| Organisation | Summary of Response | MORL Approach |
|---|---|---|
| Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued) | <p>* The SNCBs note that table 5.2 (p.84) includes the Special Area of Conservation ("SAC") rivers that may need consideration, of which the closest – the River Spey SAC – is probably the most relevant. The SNCBs note that the following impacts will need consideration in respect of the qualifying interests of the listed SACs, as well as in relation to marine fish and shellfish:</p> <p style="text-align: right;">Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued)</p> | <p>Chapter 3.1 (Hydrodynamics, Sedimentary and Coastal Processes) modelled suspended sediment concentrations associated with the modified OFI. Results from this assessment were included in the Benthic Ecology, Fish and Shellfish Ecology Impact assessments (Chapters 4.1 and 4.2). Potential effects on SACs are included in a Habitats Regulations Appraisal within each chapter and summarised where relevant in Chapter 6.1.</p> <p>Chapter 3.1 (Hydrodynamics, Sedimentary and Coastal Processes) modelled suspended sediment concentrations associated with the modified OFI. Results from this assessment were included in the Benthic Ecology, Fish and Shellfish Ecology Impact assessments (Chapters 4.1 and 4.2). Potential effects on SACs are included in a Habitats Regulations Appraisal within each chapter and summarised in Chapter 6.1.</p> <p>MORL has provided further information in terms of Chapter 2.2 Project Description and Figure 1.1-4.</p> |

| Organisation | Summary of Response | MORI Approach |
|--|---|---|
| <p>Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued)</p> <p>* The potential for any buried contaminants to be released from suspended sediment should also be considered.</p> | <p>Sediment contaminants have been analysed as part of site specific benthic surveys (see Chapter 4.1 and Technical Appendix 4.1 A Subtidal Ecology Characterisation for survey details) and the implications from temporary increased sediment concentration and sediment deposition have been considered within section 4.1.2 of Chapter 4.1 Benthic Ecology). No significant effects are predicted.</p> <p>Potential habitat loss for fish and shellfish is assessed in Chapter 4.2, Fish and Shellfish Ecology. No significant effects are predicted.</p> <p>Effects of scour protection are included in the Fish and Shellfish Ecology chapter (Chapter 4.2). No significant effects are predicted.</p> <p>* Habitat change: the applicant needs to consider any reef effects or creation of habitat arising from any scour protection used for the export cable or Offshore Substation Platforms ("OSPs").</p> <p>* Electromagnetic effects: the response of fish and shellfish to EMF is poorly understood and will need consideration. It would be helpful if the applicant could estimate EMF for the chosen AC cable type and make a comparison between:</p> <ul style="list-style-type: none"> (i) EMF emitted without any mitigation; and (ii) any residual EMF emitted after adoption of mitigation methods. | <p>Effects of EMF, including EMF levels with and without mitigation, are assessed in Chapter 4.2, Fish and Shellfish Ecology. No significant effects are predicted.</p> |

| Organisation | Summary of Response | MORL Approach |
|---|--|--|
| Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued) | <p>* In particular, the SNCBs seek to understand whether cable burial limits the strength, or reach, of EMF effects and whether more advanced cable casing might limit such effects.</p> | <p>The assessment assumed only cable burial or protection as mitigation, and this sufficiently mitigates any significant effect from EMF. Generally speaking, EMF is only detectable within very close proximity to the cables. A full assessment is included in Chapter 4.2, Fish and Shellfish Ecology. No significant effects are predicted.</p> <p>The baseline information presented in section 4.3.1 of Chapter 4.3, Marine Mammals includes information on the species abundance and distribution of marine mammals within the Moray Firth. MORL are aware of the area of search for a potential Marine Protected Area ("MPA") in respect of minke whale. In addition to the data sources listed in the scoping report, the SNCBs recommend contacting the Cetacean Research and Rescue Unit who have done a lot of work on minke whale in the area as well as Whale & Dolphin Conservation who collate sightings for Spey Bay.</p> |

| Organisation | Summary of Response | MORL Approach |
|---|--|---|
| <p>Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued)</p> | <ul style="list-style-type: none"> * Table 5-3 (p.90) sets out the range of marine mammals recorded in the Moray Firth. As correctly identified in the scoping report, bottlenose dolphin are a qualifying interest of the Moray Firth SAC and harbour seal are a qualifying interest of the Dornoch Firth and Morich More SAC. Further advice in respect of the legislative process and Habitats Regulations Appraisal ("HRA") applying to these SAC interests can be found in the SNCBs scoping advice on the MORL Round 3 wind farms (letter dated 28 October 2010 – Annex E). | <p>The assessment presented within Chapter 4.3 Marine Mammals took into account the two Moray Firth SACs designated for marine mammals. Information to support an HRA has also been presented (see Habitats Regulations Appraisal section within Chapter 4.3 and Chapter 6 Habitats Regulations Appraisal).</p> <p>MORL acknowledges that all cetaceans are European Protected Species. An EPS Assessment has been included within the MORL ES, 2012 (Technical Appendix 7.3.H) which is referred to within the assessment of the modified OffT (section 4.3.2.9).</p> <p>Disturbance/displacement has been considered one of the key effects on marine mammals during construction. Details on the impact assessment methodologies and results are presented within sections 4.3.2 and 4.3.3 (impact assessment for the modified OffT and cumulative impact assessment respectively) of Chapter 4.3 Marine Mammals. HDD is one of the options considered for the cable landfall.</p> |

| Organisation | Summary of Response | MORL Approach |
|--|---|--|
| <p>Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued)</p> <ul style="list-style-type: none"> * Collision risk, including potential corkscrew injury from ducted propellers; this issue is under current investigation by SMRU, in a research programme funded by MS. The SNCBs would welcome further discussion of this matter at an appropriate point, and probably best co-ordinated by MS via the proposed regional advisory group for wind farm development in the Moray Firth (condition 27 on the MORL S36 consents). | <p>Collision risk (including the risk of corkscrew injury from ducted propellers) has been considered within sections 4.3.2 and 4.3.3 (Impact assessment for the modified OffI and cumulative impact assessment respectively) of Chapter 4.3 Marine Mammals.</p> <p>No significant effects are predicted.</p> | <p>The results from the Benthic Ecology (Chapter 4.1) and the Fish and Shellfish ecology (Chapter 4.2) have been taken into account in the assessment of effects on marine mammal prey species. Indirect effects resulting from impacts on prey species are within sections 4.3.2 and 4.3.3 (Impact assessment for the modified OffI and cumulative impact assessment respectively) of Chapter 4.3 Marine Mammals.</p> |
| | | <ul style="list-style-type: none"> * Indirect effects resulting from impacts on prey species: this issue can be informed by the results from benthic survey work. The SNCBs are satisfied that this aspect can be considered via desk-based appraisal as proposed in the scoping report. |

| Organisation | Summary of Response | MORL Approach |
|---|--|---------------|
| <p>Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued)</p> <p>* The SNCBs also highlight the likelihood that cumulative impacts on marine mammals will need to be addressed for these proposed transmission works. There is a range of development consented, or proposed, that may impact on marine mammals in the Moray Firth including the MORL and BOWL offshore wind farms, their associated transmission works, the Caithness / Moray subsea cable link and a range of harbour developments including the three National Renewables Infrastructure Projects ("NRIPs") in the Moray Firth – Ardersier, Invergordon and Nigg – as well as other development proposals further afield.</p> <p>* The SNCBs would welcome further discussion of possible cumulative impacts at the appropriate time, probably best co-ordinated by MS via the proposed regional advisory group.</p> <p>6. Ornithology</p> <p>* The SNCBs refer to section 5.2.7 in the scoping report on 'Ornithology (Offshore)'. The SNCBs note the potential for significant waterbird and wader interest along this coastline and in proximity to the cable landfall options. The JNCC have undertaken survey work as part of the process to identify new Marine Special Protection Areas ("SPAs"), and the coastal waters of the Moray Firth are an area of search for a possible inshore SPA for non-breeding aggregations of marine waterbirds (ducks, grebes and divers). The SNCBs recommend further discussion with the JNCC's Seabirds at Sea team to check for available survey data.</p> <p>* The SNCBs also recommend contacting the British Trust for Ornithology ("BTO") to obtain the WeBS count data for this stretch of coastline. Depending on review of all available information, this may be sufficient to inform assessment and mitigation methods for waterbirds and waders in respect of the cable works. However, it is possible that further inter-tidal survey may be required or helpful for impact assessment.</p> | <p>The cumulative impact assessment on marine mammals has been undertaken taking into account a number of projects / proposals as advised by Marine Scotland and JNCC/SNH, including the MORL and BOWL consented wind farms, offshore cables and harbour developments. See section 4.13 of Chapter 4.3 Marine Mammals for details on methodologies and results of the assessment. No significant effects are predicted.</p> <p>Noted. MS to coordinate discussion.</p> <p>The baseline information presented within section 4.4.1 of Chapter 4.4 Marine Ornithology describes the baseline conditions within the modified OffI area taking into account both JNCC (ESAS) and BTO survey (WeBS) data.</p> <p>The baseline information presented within section 4.4.1 of Chapter 4.4 Marine Ornithology describes the baseline conditions within the modified OffI area taking into account both JNCC (ESAS) and BTO survey (WeBS) data.</p> | |

| Organisation | Summary of Response | MORL Approach | |
|--|---|---|---|
| | <ul style="list-style-type: none"> * The SNCBs advise that potential disturbance to waterbirds and waders is the key ornithological impact to address. The SNCBs do not identify any requirement for boat-based or aerial survey work in respect of seabird species along the cable route, although review of the data that MORL have already collected for the wind farms may be informative. | <p>A range of waterbirds and waders were considered within the assessment of effects on marine ornithology (see section 4.4.1 for a description of the baseline taking into account MORL's boat-based and aerial surveys as well as a desk-study review of ornithological interests).</p> | |
| Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued) | <ul style="list-style-type: none"> * The SNCBs consider that desk-based appraisal is sufficient to consider potential disturbance or indirect impacts on seabird species arising from the export cable works. Consideration of any indirect impacts on seabirds from potential impacts to their prey species can be informed by the results from benthic survey work. | <p>As advised by JNCC/SNH the assessment of effects on marine ornithology has been undertaken based on a desk-study of ornithological interests in the modified OffI area (see section 4.4.1 baseline information of Chapter 4.4 Marine Ornithology for details). Indirect effects on prey species have been considered in section 4.4.2 and 4.4.3 of Chapter 4.3 (OffI impact assessment and cumulative impact assessment respectively).</p> | <p>Lighting requirements have not been finalised at the time of this application. Lighting requirements will be in accordance with standard guidelines and agreed with the appropriate stakeholders including NLB, MCA and the CAA.</p> |
| | | | <ul style="list-style-type: none"> * The SNCBs would also welcome further discussion of offshore substation lighting requirements in respect of seabirds. This could be undertaken as part of the discussions to discharge conditions on the Section 36 / marine licence for each wind farm (in particular condition 19 relating to lighting and marking plans). |

| Organisation | Summary of Response | MORL Approach |
|--|---|---|
| Joint Nature Conservation Committee (JNCC) and Scottish Natural Heritage (SNH) (continued) | <p>7. Landscape, Seascape and Visual Impact Assessment</p> <ul style="list-style-type: none"> * The SNCBs refer to section 5.3.8 of the scoping report: 'Seascape, Landscape and Visual Receptors'. As indicated, there was a comprehensive seascape, landscape and visual impact assessment ("SLVIA") provided in the ES supporting the Section 36 and marine licence applications for the MORL Round 3 wind farms. * The SNCBs would however, welcome some further consideration of the offshore substations as part of the assessment for the revised transmission works. This work can use the baseline character assessment and other information in the submitted wind farm ES to consider any additional, or different, SLVIA impacts from those previously assessed in respect of the proposed offshore substations in combination with the (consented) wind turbines. | No action required. |
| British Telecom (Radio Network Protection Team) | <ul style="list-style-type: none"> * BT Radio Network Protection do not have any comments to make "Nil Return" | No action required. |
| Health and Safety Executive (HSE) | <ul style="list-style-type: none"> * HSE is the national independent watchdog for work-related health, safety and illness. They have a dedicated team that regulates occupational health and safety standards for the offshore renewable energies industry. You are advised to contact this team to discuss how you will manage health and safety during the planning, construction and operation of your offshore renewable project. | Noted |
| Highlands and Islands Airports Ltd. | <ul style="list-style-type: none"> * This development falls outside the safeguarded areas for Inverness Airport, therefore HIAL do not object to Transmission Infrastructure. | Noted |
| Historic Scotland (HS) | <p>General Comments</p> <ul style="list-style-type: none"> * HS comments concentrate on our statutory remit for scheduled monuments and their setting, category A listed buildings and their setting and gardens and designed landscapes and battlefields appearing in their respective Inventories. This response covers the scoping for both the offshore and onshore elements of the proposal. | <p>MORL will continue discussions with HS as information on the detailed design of the modified TI as it becomes available.</p> <p>* HS welcome the preparatory work carried out in relation to identifying the scope of the assessment as it relates to the historic environment. HS is also content to agree with the proposed assessment methodology outlined within the report. HS therefore only have a small number of comments to offer at this stage. Given the relatively wide corridor, HS would be happy to discuss any issues arising for the historic environment as the proposals become more detailed and the assessment progresses. However, at this stage HS would ask that the historic environment baseline informs decision making relating to the preferred route and seeks to avoid these assets.</p> |

| Organisation | Summary of Response | MORI Approach |
|----------------------------------|--|--|
| Offshore Environment | <p>* HS welcome the consideration given to the potential effects for the historic environment as a result of the offshore cable laying. The acknowledgement of the need to avoid features of historic interest is welcomed and in light of this HS particularly welcome the reference to best practice guidance relating to works taking place in the marine historic environment, in relation to Historic Marine Protected Areas (HMPA). HS can confirm that on 1 November 2013, section 1 of the Protection of Wrecks Act 1973 was repealed in Scotland. Historic shipwreck sites previously designated under this legislation have now been designated as Historic MPAs under the Marine (Scotland) Act 2010.</p> | <p>Measures to mitigate potential effects on archaeology and cultural heritage (including the use of exclusion zones around sites of known or potential archaeological interest) have been detailed in sections 5.4.2.68 to 5.4.2.80 of Chapter 5.4 Archaeology and Cultural Heritage. The guidance and legislation considered in the assessment has been presented within the Legislative and Planning Framework section 5.4.1.23 of Chapter 5.4.</p> |
| Historic Scotland (continued) | <p>Onshore Environment</p> <p>* HS can confirm the findings of the initial baseline survey regarding designated sites within the onshore cable corridor and substation search areas. When considering options and working towards a detailed route for the transmission cable every effort should be made to avoid direct impacts on these sites. The consideration of any impacts on the setting of such sites is also to be welcomed, particularly in reference to the proposed substation.</p> | <p>Measures to mitigate potential effects on archaeology and cultural heritage (including avoidance of cultural heritage assets along the onshore export cable route corridor and use of screening for potential effects on setting from the onshore substations) have been detailed in sections 5.4.2.68 to 5.4.2.80 of Chapter 5.4 Archaeology and Cultural Heritage.</p> |

| Organisation | Summary of Response | MORL Approach |
|---|--|--|
| Historic Scotland (continued) | <p>Figure 5.20 Scheduled Monument Records</p> <p>* To note that SMR refers to Sites and Monuments Record as opposed to the reported Scheduled Monuments Record. It should therefore be noted that the majority of the sites identified in this figure are not scheduled monuments.</p> | <p>Noted. The description of the archaeological and cultural heritage environment around the modified onshore export cable route corridor and area of the substations is presented within Technical Appendix 5.4 A Baseline Review of the Offshore and Onshore Archaeology. A summary is also presented within Section 5.4.1 of Chapter 5.4 Archaeology and Cultural Heritage.</p> |
| Moray Firth and North Coast Inshore Fisheries Group | <p>Site Specific Survey Methodology</p> <p>* HS welcome the guidance and legislation that will be referred to when carrying out the assessment or bringing forward mitigation. As a point of detail Scottish Planning Policy 23: Planning and the Historic Environment has been superseded by the consolidated Scottish Planning Policy.</p> | <p>Noted. The guidance and legislation considered in the Archaeology and Cultural Heritage assessment has been presented within the Legislative and Planning Framework section 5.4.1.23 of Chapter 5.4.</p> |
| Moray Firth Partnership | <p>* IFG would wish to make an observation in regard to EIA. The EIA on fishing is basically non-existent. MORL have collated no evidence on the majority of fish and especially shellfish to make any reasonable assumption on the impacts from the development.</p> | <p>Noted. A baseline information and environmental impact assessment is presented in Chapter 4.2 Fish and Shellfish Ecology.</p> |
| NERL Safeguarding ("NATS") | <p>* MFP advised they will not be submitting a detailed response to this preliminary consultation. MFP copied the details to the East Coast, Moray Firth and North Coast Inshore Fisheries Groups, and have encouraged the IFG members to respond directly as appropriate.</p> | <p>Noted</p> |
| Northern Lighthouse Board (NLB) | <p>* With regard to the proposed consultation and the scope of assessment, NLB would only comment on that part relating to Shipping and Navigational Safety.</p> | <p>No action required.</p> |

| Organisation | Summary of Response | MORL Approach |
|--|---|---|
| Northern Lighthouse Board (NLB) (continued) | <ul style="list-style-type: none"> * NLB would advise that the following should be considered as an initial response to the scoping document regarding input to the EIA which will accompany any necessary marine licence application for the modified transmission infrastructure, and that any formal recommendations for any lighting and marking will be given through the Marine Licensing process. | <p>Details of the infrastructure and installation methods are included in Chapter 2.2 (Project Description). The NRA undertaken as part of the MORL ES (MORL, 2012) is included in the Shipping and Navigation Assessment (Chapter 5.2).</p> |
| RSPB Scotland | <ul style="list-style-type: none"> * NLB are happy to offer any further assistance, or if any of the above may require clarification. | <p>The focus of the RSPB Scotland response is that of potential ornithological impacts arising from the proposed development, both on and offshore. RSPB Scotland support the assessment of potential cumulative effects, particularly given the extent of activities that could occur across similar timescales within the Moray Firth over the next few years. RSPB Scotland also highlight below a number of issues that RSPB Scotland recommend require further consideration and reporting as part of the environmental impact assessment.</p> <p>Breeding and wintering bird surveys have been undertaken, and are detailed in Technical Appendix 4.6 A (Terrestrial Ecology). Potential effects on breeding and wintering birds are assessed in Chapter 4.6 (Terrestrial Ecology). No significant effects are predicted.</p> |

| Organisation | Summary of Response | MORI Approach |
|---|---|---|
| <ul style="list-style-type: none"> * In Section 5.2.6 Terrestrial Ecology the map in Figure 5-14 or the text in paragraph 5.2.6 does not include any reference to Aberdeenshire Council's Local Nature Conservation Sites (former SINS sites). Inclusion of these designations is recommended. | <p>Offshore</p> <ul style="list-style-type: none"> * In Section 5.2.7 the offshore search area and landfall points transect a favoured area for White-billed diver (<i>Gavia adamsii</i>), a globally 'Near Threatened Species' under IUCN and seabird, classed as 'Vulnerable' under IUCN. Consideration should be made towards any potential implications of the proposal on this species, which could require further data collection and / or survey work. <p>RSPB Scotland (continued)</p> | <p>The full assessment methodology was agreed with SNH at a meeting in Aberdeen in May 2014. Full details can be found in Chapter 4.6 (Terrestrial Ecology), Table 4.6-1.</p> <p>White-billed diver has been considered in the baseline characteristics (section 4.4.1) and OffI impact assessment and cumulative impact assessment (section 4.4.2 and 4.4.3 respectively) of Chapter 4.4 Marine Ornithology.</p> <p>White-billed diver has been considered in the baseline characteristics (section 4.4.1) and OffI impact assessment and cumulative impact assessment (Section 4.4.2 and 4.4.3 respectively) of Chapter 4.4 Marine Ornithology. It should be noted that following refinement of the offshore export cable route corridor that the export cable landfall is proposed at Inverboyndie (see Figure 1.1-4).</p> |
| <p>Royal Yachting Association (RYA) Scotland</p> | <ul style="list-style-type: none"> * RYA Scotland do not envisage any adverse impact of the modified transmission scheme on recreational boating. * During the construction phase, recreational sailors will best be alerted by notices at neighboring harbours and marinas, particularly the Caledonian Canal, Whitehills and Peterhead. Cable landfalls rarely pose a problem for anchoring by recreational craft and RYA Scotland will be happy to advise further if required once the exact landfall site has been chosen. Information on harbours in the this area can, in any case, be found in The Clyde Cruising Club Sailing Directions and Anchorages – Part 5, North East Scotland and Orkney Islands. | <p>Noted</p> |

| Organisation | Summary of Response | MORL Approach |
|--|---|---|
| Royal Yachting Association (RYA) Scotland (continued) | <p>* For completeness, RYA Scotland should note that the recreational sailing routes marked on Fig. 5.17 have been taken from The UK Coastal Atlas of Recreational Boating, 2nd edition, published by the RYA in 2008, to which marking the mid-point of a corridor. There have been no updates in this area since the date of publication although there has been an increase in traffic. The Pentland Firth and Orkney Waters Shipping Study commissioned by MS showed that although only a minority of recreational craft transmit an AIS signal, their courses were representative of recreational craft in general, except perhaps in areas close inshore. The same study showed the seasonal pattern of movements of recreational craft. In the present case, RYA Scotland see no need for the collection of additional data on the movement of recreational craft.</p> | <p>Noted</p> |
| Scottish Fishermen's Federation (SFF) | <p>* The SFF responds on behalf of its nine constituent member associations: Anglo Scottish Fisherman's Association, Clyde Fisherman's Association, Fishing Vessel Agents & Owners Association (Scotland), Mallaig & North West fisherman's Association, Orkney Fisheries Association, Scallop Association, Shetland Fisherman's Association, Scottish Pelagic Fisherman's Association and the Scottish Whitefish Producers Association.</p> | <p>MORL has committed to a target burial depth for cables of 1 m and where this is not possible, cable protection measures will be discussed with stakeholders and used in this ES, the MORL ES (2012) and the draft MORL Commercial Fisheries Mitigation Strategy submitted to MS-LOT as discussed above. The potential effects of the cable to commercial fishing activity along with the appropriate mitigation methods (including cable burial and discussion through the Moray Firth Commercial Fisheries Working Group) are described in Chapter 5.1 – section 5.1.2.</p> |

| Organisation | Summary of Response | MORI Approach |
|--|--|--|
| Scottish Fishermen's Federation (continued) | <ul style="list-style-type: none"> * The SFF are content with the definition given in Chapter 3, page 35 on the cumulative and in combination impacts, and expect to see these clearly illustrated along with any necessary mitigation. | <p>The cumulative and in combination effects to commercial fishing activity are described in Chapter 5.1 – section 5.1.3.</p> |
| Whale and Dolphin Conservation (WDC) | <ul style="list-style-type: none"> * Overall WDC were happy with what had been 'scoped in' for marine mammals. | <p>The three offshore wind farm developments in the Firth of Forth, Aberdeen Harbour along with other projects/proposals have been considered in the assessment of cumulative effects on marine mammals (as detailed within Section 4.3.3 of Chapter 4.3 Marine Mammals).</p> <p>* For the 'cumulative impacts', developments outside of the Moray Firth should also be considered. For example, Aberdeen Harbour Extension and the three offshore wind farm developments in the Firth of Forth (Neart na Gaoith, Inch Cape and Seagreen) should all be included because they are all within the Management Unit and known range of the Moray Firth SAC bottlenose dolphin population.</p> |
| | | <p>Collision risk from increased vessel movement, including risk from corkscrew injury from ducted propellers has been considered within section 4.3.2 and 4.3.3 (impact assessment for the Offshore and cumulative impact assessment) of Chapter 4.3 Marine Mammals.</p> <p>* The risk of corkscrew injuries ("CSI") should be included in the EIA. It is not clear from the Scoping Report if CSI will be included in the section 'increased collision risk' or not.</p> |

| Organisation | Summary of Response | MORI Approach |
|---|---|---------------|
| Whale and Dolphin Conservation (WDC) (continued) | * WDC are happy to discuss any questions regarding these comments and look forward to receiving the EIA in the near future. | Noted |

Annex 2 to Chapter 1.3

Table 1 Relevant to Aberdeenshire Council- Summary of Modified TI Scoping Opinions Received and Approach Taken to Issues Raised

| Organisation | Summary of Response | MORL Approach |
|---|--|---|
| Historic Scotland (HS) | <p>* There is general agreement with methodology involved however a few minor points were raised. Figure 5.20 refers to SMR as Scheduled Monuments Record as opposed to Sites and Monuments Record. It should be noted therefore that the majority of the sites recorded and not scheduled monuments. It should also be noted that Scottish Planning Policy 23; Planning and the Historic Environment has been superseded by the consolidated Scottish Planning Policy.</p> | <p>Noted. The description of the archaeological and cultural heritage environment around the modified onshore export cable route corridor and area of the substations is presented within Technical Appendix 5.4 A Baseline Review of the Offshore and Onshore Archaeology. A summary is also presented within section 5.4.1 of Chapter 5.4 Archaeology and Cultural Heritage. The guidance and legislation considered in the Archaeology and Cultural Heritage Chapter has been presented within the Legislative and Planning Framework section 5.4.1.23 of Chapter 5.4.</p> |
| Scottish Environment Protection Agency (SEPA) | <p>* While all of the issues below should be addressed in the Environmental Statement (ES), there may be opportunities for several of these to be scoped out of detailed consideration. The justification for this approach in relation to specific issues should be set out within the ES. We would welcome the opportunity to comment on the draft ES. Please note that SEPA can process files only of a maximum size of 25MB and therefore, when the ES is submitted, it should be divided into appropriately sized and named sections.</p> <p>1. Disruption to Wetlands Including Peatlands</p> <p>1.1 SEPA note from page 37 of the Scoping Report that you state that there is no evidence of peat. We are also unable to find any reference to wetlands as a whole within the report. We would ask that you specifically address any disruption to wetlands within the finalised Environmental Report.</p> | <p>Potential effects on wetlands are assessed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land.</p> |

| Organisation | Summary of Response | MORI Approach |
|---|---|---|
| | <p>1.2 If there are wetlands or peatland systems present, the ES or planning submission should demonstrate how the layout and design of the proposal, including any associated borrow pits, hard standing and roads, avoid impact on such areas.</p> | <p>Potential effects on wetlands are assessed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land.</p> <p>A Phase 1 Habitat Survey was undertaken as part of the terrestrial ecology surveys and is detailed in Chapter 4.6 (Terrestrial Ecology), with associated figures showing the proposed infrastructure. Note that, at this stage, the onshore cable route is a 500 m wide corridor within which the cables will be located and will comprise a maximum working width of 60 m.</p> |
| | | <p>Potential effects on wetlands are assessed in Section 4.6.2 of Chapter 4.6 Terrestrial Ecology and Chapter 3.2 Hydrology, Geology and Contaminated Land.</p> |
| | | |
| Scottish Environment Protection Agency (SEPA) (continued) | <p>1.3 A Phase 1 habitat survey should be carried out for the whole site and the guidance A Functional Wetland Typology for Scotland should be used to help identify all wetland areas. National Vegetation Classification should be completed for any wetlands identified. Results of these findings should be submitted, including a map with all the proposed infrastructure overlain on the vegetation maps to clearly show which areas will be impacted and avoided.</p> | <p>1.3 A Phase 1 habitat survey should be carried out for the whole site and the guidance A Functional Wetland Typology for Scotland should be used to help identify all wetland areas. National Vegetation Classification should be completed for any wetlands identified. Results of these findings should be submitted, including a map with all the proposed infrastructure overlain on the vegetation maps to clearly show which areas will be impacted and avoided.</p> |
| | <p>1.4 Groundwater dependent terrestrial ecosystems, which are types of wetland, are specifically protected under the Water Framework Directive. The results of the National Vegetation Classification survey and Appendix 2 (which is also applicable to other types of developments) of our Planning guidance on windfarm developments should be used to identify if wetlands are groundwater dependent terrestrial ecosystems.</p> | <p>1.4 Groundwater dependent terrestrial ecosystems, which are types of wetland, are specifically protected under the Water Framework Directive. The results of the National Vegetation Classification survey and Appendix 2 (which is also applicable to other types of developments) of our Planning guidance on windfarm developments should be used to identify if wetlands are groundwater dependent terrestrial ecosystems.</p> |
| | | <p>Potential effects on wetlands are assessed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land. Note that, at this stage, the onshore cable route is a 500 m wide corridor within which the cables will be located and will comprise a maximum working width of 60 m.</p> |
| | | |

| Organisation | Summary of Response | MORI Approach |
|--|---|--|
| Scottish Environment Protection Agency (SEPA) (continued) | <p>1.6 For areas where avoidance is impossible, details of how impacts upon wetlands including peatlands are minimised and mitigated should be provided within the ES or planning submission. In particular impacts that should be considered include those from drainage, pollution and waste management. This should include preventative/mitigation measures to avoid significant drying or oxidation of peat through, for example, the construction of access tracks, dewatering, excavations, drainage channels, cable trenches, or the storage and re-use of excavated peat. Detailed information on waste management is required as detailed below. Any mitigation proposals should also be detailed within the Construction Environmental Management Document, as detailed below.</p> | <p>Effects upon wetlands including peatlands is assessed and mitigation discussed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land. Note that, at this stage, the onshore cable route is a 500 m wide corridor within which the cables will be located and will comprise a maximum working width of 60 m.</p> |
| Scottish Environment Protection Agency (SEPA) (continued) | <p>2.1 Disturbance and Re-Use of Excavated Peat 2.1 Where the proposed infrastructure will impact upon peatlands, it is now best practice for developers to produce a Peat Management Plan within the Environmental Statement which sets out the principles as to how any surplus peat will be managed within the site. It is important this is done prior to the application gaining consent to ensure all opportunities to minimise peat disturbance are considered within the site design and that acceptable proposals to reuse the surplus peat can be accommodated within the site layout without significant environmental impact.</p> | <p>No peat bog wetlands were identified within the route of the OnTl. If required, a Peat Management Plan will be developed once the detailed cable route is finalised (at the time of application for full planning permission). Mitigation measures to be included are detailed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land.</p> |
| Scottish Environment Protection Agency (SEPA) (continued) | <p>2.2 We would expect all these proposals to be in accordance with Guidance on the Assessment of Peat Volumes, Reuse of Excavated Peat and Minimisation of Waste and our Regulatory Position Statement - Developments on Peat. Any proposals for road shoulders should follow the best practice guidance detailed in Pages 14 and 15 of the Scottish Renewables Guidance on the Assessment of Peat Volumes, Reuse of Excavated Peat and Minimisation of Waste, Page 27 of the Scottish Natural Heritage (SNH) and Forestry Commission (FCS) Floating Roads on Peat guidance and Pages 38 and 39 of SEPA, SNH and Scottish Renewables and FCS guidance Good practice during windfarm construction. Please note that only fibrous peat is likely to be suitable for battering road verges. Any landscaping or road batters should be limited to the areas of ground already disturbed.</p> | <p>No peat bog wetlands were identified within the route of the OnTl. Mitigation measures to be included are detailed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land.</p> |

| Organisation | Summary of Response | MORI Approach |
|---|---|---|
| 3.1 Existing Groundwater Abstractions 3.1 We note on page 64 of the Scoping Report that an extensive desk study will be undertaken to establish the baseline hydrological conditions within the cable corridor search area, at the substations and landfall point once selected, which is very much welcomed. | 3.2 As you may already know, roads, foundations and other construction works associated with large scale developments can disrupt groundwater flow and impact on groundwater abstractions. To address this risk a list of groundwater abstractions both within and outwith the site boundary, within a radius of i) 100 m from roads, tracks and trenches and ii) 250 m from borrow pits and foundations) should be provided. 3.3 If groundwater abstractions are identified within the 100 m radius of roads, tracks and trenches or 250 m radius from borrow pits and foundations, then either the applicant should ensure that the route or location of engineering operations avoid this buffer area or further information and investigations will be required to show that impacts on abstractions are acceptable. Further details can be found in Appendix 2 (which is also applicable to other types of developments) of our Planning guidance on windfarm developments. | This is detailed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land. |

Scottish Environment Protection Agency (SEPA)
(continued)

4. Engineering Activities in the Water Environment

4.1 In order to meet the objectives of the Water Framework Directive of preventing any deterioration and improving the water environment, developments should be designed to avoid engineering activities in the water environment wherever possible. The water environment includes burns, rivers, lochs, wetlands, groundwater and reservoirs. We require it to be demonstrated that every effort has been made to leave the water environment in its natural state. Engineering activities such as culverts, bridges, watercourse diversions, bank modifications or dams should be avoided unless there is no practicable alternative. Paragraph 211 of SPP deters unnecessary culverting. Where a watercourse crossing cannot be avoided, bridging solutions or bottomless or arched culverts which do not affect the bed and banks of the watercourse should be used. Further guidance on the design and implementation of crossings can be found in our Construction of River Crossings Good Practice Guide. Other best practice guidance is also available within the water engineering section of our website.

| Organisation | Summary of Response | MORI Approach |
|--|---|--|
| Scottish Environment Protection Agency (SEPA) (continued) | <p>4.2 If the engineering works proposed are likely to result in increased flood risk to people or property then a flood risk assessment should be submitted in support of the planning application and we should be consulted as detailed below.</p> <p>4.3 A site survey of existing water features and a map of the location of all proposed engineering activities in the water environment should be included in the ES or planning submission. A systematic table detailing the justification for the activity and how any adverse impact will be mitigated should also be included. The table should be accompanied by a photograph of each affected water body along with its dimensions. Justification for the location of any proposed activity is a key issue for us to assess at the planning stage.</p> <p>(continued)</p> | <p>Flood risk has been assessed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land. Note that, at this stage, the onshore cable route is a 500 m wide corridor within which the cables will be located and will comprise a maximum working width of 60 m.</p> <p>Water features along the route of the modified OnTl have been assessed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land. Note that, at this stage, the onshore cable route is a 500 m wide corridor within which the cables will be located and will comprise a maximum working width of 60 m. Specific water crossings etc will be assessed in the application for full planning permission.</p> |
| | | <p>Mitigation options along the route of the modified OnTl have been included in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land. Note that, at this stage, the onshore cable route is a 500 m wide corridor within which the cables will be located and will comprise a maximum working width of 60 m. Specific water crossings etc will be assessed in the application for full planning permission.</p> |
| | | <p>4.4 Where developments cover a large area, there will usually be opportunities to incorporate improvements in the water environment required by the Water Framework Directive within and/or immediately adjacent to the site either as part of mitigation measures for proposed works or as compensation for environmental impact. We encourage applicants to seek such opportunities to avoid or offset environmental impacts. Improvements which might be considered could include the removal of redundant weirs, the creation of buffer strips and provision of fencing along watercourses. Fencing off watercourses and creating buffer strips both helps reduce the risk of diffuse water pollution and affords protection to the riparian habitat.</p> |

| Organisation | Summary of Response | MORI Approach |
|--|--|--|
| <p>5. Water Abstraction</p> <p>5.1 Where water abstraction is proposed we request that the ES, or planning submission, details if a public or private source will be used. If a private source is to be used the information below should be included. Whilst we regulate water abstractions under the Water Environment (Controlled Activities) (Scotland) Regulations 2011 (as amended), the following information is required at the planning stage to advise on the acceptability of the abstraction at this location: Source e.g. groundwater or surface water;</p> <ul style="list-style-type: none"> * Location e.g. grid reference and description of site; * Volume e.g. quantity of water to be extracted; * Timing of abstraction e.g. will there be a continuous abstraction; * Nature of abstraction e.g. sump or impoundment; * Proposed operating regime e.g. details of abstraction including any existing water features; and * Impacts of the proposed abstraction upon the surrounding water environment. <p>Scottish Environment Protection Agency (SEPA) (continued)</p> | <p>The application does not propose any abstractions of water.</p> | <p>Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land includes a Cumulative Impact Assessment within Section 3.2.3.</p> <p>Pollution prevention is detailed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land and mitigation measures identified take into account SEPA best practice and regulatory advice.</p> |

| Organisation | Summary of Response | MORI Approach |
|---|---|--|
| | <p>6.2 We advise that the applicant should, through the EIA process or planning submission, systematically identify all aspects of site work that might impact upon the environment, potential pollution risks associated with the proposals and identify the principles of preventative measures and mitigation. This will establish a robust environmental management process for the development. A draft Schedule of Mitigation should be produced as part of this process. This should cover all the environmental sensitivities, pollution prevention and mitigation measures identified to avoid or minimise environmental effects. Details of the specific issues that we expect to be addressed are available on the Pollution Prevention and Environmental Management section of our website.</p> | <p>Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land identifies all aspects of site work that might affect the environment and, where appropriate, mitigation options to address these.</p> |
| | <p>6.3 A Construction Environmental Management Document is a key management tool to implement the Schedule of Mitigation. We recommend that the principles of this document are set out in the ES outlining how the draft Schedule of Mitigation will be implemented. This document should form the basis of more detailed site specific Construction Environmental Management Plans which, along with detailed method statements, may be required by planning condition or, in certain cases, through environmental regulation. This approach provides a useful link between the principles of development which need to be outlined at the early stages of the project and the method statements which are usually produced following award of contract (just before development commences).</p> | <p>Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land outlines mitigation and the principles of a Construction Environmental Management Plan will be developed as part of the application for full planning permission.</p> |
| | <p>6.4 We would refer you to best practice advice prepared by SNH SEPA and the windfarm industry Good Practice During Windfarm Construction. Additionally, the Highland Council (in conjunction with industry and other key agencies) has developed a guidance note Construction Environmental Management Process for Large Scale Projects.</p> | <p>Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land refers to various best practice documents.</p> |
| Scottish Environment Protection Agency (SEPA) (continued) | | <p>7. Borrow Pits</p> <p>7.1 Detailed investigations in relation to the need for and impact of such facilities should be contained in the ES or planning submission. We note from the Scoping Report that there is currently no reference to borrow pits. Where borrow pits are proposed, information should be provided regarding their location, size and nature. In particular, details of the proposed depth of the excavation compared to the actual topography and water table should be submitted. In addition details of the proposed restoration profile, proposed drainage and settlement traps, turf and overburden removal and storage for reinstatement should be submitted.</p> |

| Organisation | Summary of Response | MORI Approach |
|---|---|--|
| Scottish Environment Protection Agency (SEPA) (continued) | <p>7.2 The impact of such facilities (including dust, blasting and impact on water) should be appraised as part of the overall impact of the scheme. Information should cover, in relation to water; at least the information set out in Planning Advice Note PAN 50 Controlling the Environmental Effects of Surface Mineral Workings (Paragraph 53). In relation to groundwater, information (Paragraph 52 of PAN 50) only needs to be provided where there is an abstraction or groundwater dependent terrestrial ecosystem within 250 m of the borrow pit. Additional information on groundwater is provided above.</p> <p>8. Flood Risk</p> <p>8.1 The cable routes and substation sites should be assessed for flood risk from all sources in line with Scottish Planning Policy (Paragraphs 196-211). Our indicative River & Coastal Flood Map (Scotland) is available to view online and further information and advice can be sought from your local authority technical or engineering services department and from our website.</p> <p>8.2 If a flood risk is identified then a Flood Risk Assessment should be carried out following the guidance set out in our "Technical flood risk guidance for stakeholders" and (if relevant) "Technical Guidance Revision Note 1 -the Estimation of Coastal Sea Levels" both of which can be found on the planning and flood risk section of our website.</p> | <p>Borrow pits are not required as part of this development. Should they be required once detailed plans are developed, this will be included in the application for full planning permission.</p> <p>Flood risk is assessed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land.</p> <p>Flood risk is assessed in Chapter 3.2, Hydrology, Hydrogeology and Contaminated Land. No significant flood risks were identified.</p> |
| Scottish Natural Heritage (SNH) | <p>9. Regulatory advice for the applicant</p> <p>9.1 Details of regulatory requirements and good practice advice for the applicant can be found on our website at www.sepa.org.uk/planning.aspx. If you are unable to find the advice you need for a specific regulatory matter, please contact a member of the operations team in your local SEPA office (details of which can be found on our website).</p> | <p>Noted.</p> <p>Chapter 2.2 (Project Description) details the proposals' Rochdale Envelope, including cable laying techniques. Table 4.6-4 sets out the parameters assessed in Chapter 4.6 Terrestrial Ecology.</p> |
| | <p>Terrestrial Ecology</p> <p>* Adequate detail of the cable laying technique(s) should be provided, including timing, rate and duration of work so that the potential impacts to sensitive species and habitats during the construction phase can be assessed.</p> | |

| Organisation | Summary of Response | MORI Approach |
|---|--|---------------|
| Desk-Based Assessment <ul style="list-style-type: none"> * In addition to the sources mentioned in Section 5.2.6, the following organisations, individuals and databases should be contacted: <ul style="list-style-type: none"> * RSPB Scotland; County Bird Recorder; The BTO in relation to the Wetland Bird Survey; The North Sea Bird Club; The local Raptor Study Group; Saving Scotland's Red Squirrels; Direct Salmon Fishery Boards; and Aberdeenshire Council Planning Authority. | <p>Sites of Special Scientific Interest for Coastal Geomorphology and Geology</p> <ul style="list-style-type: none"> * Consideration will need to be given to the geological interests of Cullen to Stake Ness Coast SSSI and Whitehills to Melrose Coast SSSI (page 55), which are adjacent to both of the potential landfall sites of Sandend Bay & Boyndie Bay. Although the precise location and route of the cables have yet to be developed, further discussions would be welcomed about the designated interests, which generally occur on and adjacent to the rocky foreshore, to further inform the development cable routes and laying options. <p>The two geological sites have been included in the hydrodynamics, sedimentary and coastal processes impact assessments.</p> <p>Landfall will not be routed through the SSSIs. Any potential effects on the SSSIs are assessed in Chapter 3.2 (Hydrology, Hydrogeology and Contaminated Land).</p> <ul style="list-style-type: none"> * The scoping report does not indicate whether impacts to the geological interest along this coast can be avoided or what mitigation is proposed – all of which will need to be addressed in the EIA. * It is advised that employing an experienced coastal geomorphologist should help in the assessment of the suitability of potential landfall options and detailed routing / micro-siting options, particularly if geological SSI interests may be affected. <p>Impacts on geological interest features are addressed in Chapter 3.1.</p> <p>ABPmer have been appointed to assist with this work.</p> | |

| Organisation | Summary of Response | MORI Approach |
|--------------|--|--|
| | <ul style="list-style-type: none"> * The potential effects of sea level rise (amongst other climate change variables) should be considered within the planning of this development (known as 'future-proofing'), particularly in respect of the cable landfall. * The aspects scoped in' and 'scoped out' as set out in the applicant's report on pages 60 - 62 of the scoping report are agreed. Aspects to be scoped in, include: <ul style="list-style-type: none"> * Damage to geological features/designated sites namely: Cullen to Stakeness Coast SSSI & Whitehills to Melrose Coast SSSI <ul style="list-style-type: none"> * alteration/modification of the hydrological/hydrogeological regime of the region and associated receptors. * disturbance of contaminated materials / soil gases and the subsequent generation of * potentially contaminated waste materials and effect upon construction materials and workers. * construction phase activities affecting the Water Environment (e.g. spillages, use of chemicals, sedimentation). | <p>All infrastructure at the landfall point will be underground, with the jointing pit well clear of Mean High Water Springs and so future-proofing is not required.</p> <p>Impacts on geological interest features (associated with hydrodynamics, sedimentary and coastal processes) are addressed in Chapter 3.1 for offshore aspects and in Chapter 3.2 (Hydrology, Hydrogeology and Contaminated Land) for onshore aspects.</p> |
| | <p>Ornithology</p> <ul style="list-style-type: none"> * The 10 km cable corridor buffer includes Troup Pennan and Lions Heads SPA and its component Gamrie and Pennan Coast SSSI. The route specified is not expected to impinge on any designated ornithological sites. | <p>The refined route does not now impinge on these sites. Impacts are assessed in Chapter 4.6 (Terrestrial Ecology).</p> |
| | <ul style="list-style-type: none"> * Recent studies of the Loch of Strathberg SPA suggest that few geese forage beyond 10 km of the site boundary and the works are scheduled outwith the period of goose occurrence at Strathberg. SNH are satisfied that the proposals are unlikely to have any significant effects on the site in this case. * The bird survey methods appear broadly acceptable. If construction works are rescheduled, a program of winter walkover surveys should again be considered. * The CBC methodology for breeding birds is acceptable. Sensitive breeding bird records should be provided in a confidential appendix in line with SNH guidance. * SNH recommend that an additional breeding bird survey should be carried out immediately prior to construction to identify nesting attempts (particularly those of Schedule 1 species) as there is a significant lag time between surveys and construction. | <p>Noted</p> <p>Noted</p> <p>Noted</p> <p>Noted</p> |

| Organisation | Summary of Response | MORL Approach |
|--|--|---|
| | <ul style="list-style-type: none"> * SNH recommend that a late summer / autumn construction schedule will avoid most, if not all, of the breeding bird sensitivities. | Potential effects are fully assessed in Chapter 4.6 (Terrestrial Ecology). |
| | <ul style="list-style-type: none"> * As the scheduling of construction works for spring and summer brings the likelihood of disturbance to breeding birds, mitigation measures will be required by means of a Breeding Bird Protection Plan or similar. | Potential effects are fully assessed in Chapter 4.6 (Terrestrial Ecology). |
| | <ul style="list-style-type: none"> * Waders are scoped out in the offshore paragraphs (Section 5.2.7), but should be included in surveys to the extent that they may use the landfall points for feeding and for nesting. | Potential effects, including the results of the coastal bird survey, are fully assessed in Chapter 4.6 (Terrestrial Ecology). |
| Scottish Natural Heritage (SNH) (continued) | <p>Freshwater</p> <ul style="list-style-type: none"> * The EIA will need to consider the potential impacts of noise and vibration upon salmonids and other fish where directional drilling is proposed. | <p>MORL has consulted with the Deveron and Spey District Salmon Fishery Boards, and potential effects are assessed in Chapter 4.2 (Fish and Shellfish Ecology) and Chapter 4.6 (Terrestrial Ecology).</p> |
| | | <ul style="list-style-type: none"> * SNH recommend consultation with the relevant District Salmon Fishery Board regarding potential impacts to salmonids and other fish species at river crossings, and in particular Redd Survey data for the areas where watercourse crossings are planned. If this data does not exist it is advised to collect this data during the spawning period later this year. |

| Organisation | Summary of Response | MORL Approach |
|--------------|---|---|
| | <p>A general assessment of installation options has been included at this stage, in line with the Rochdale Envelope. Full assessments including noise propagation data will accompany the application for full planning permission, when the cable route and installation methods are finalised.</p> <p>* Noise propagation data in relation to the drilling kit will be required to adequately assess the impacts including noise and / or vibration associated with drilling works.</p> | <p>A general assessment of installation options has been included at this stage, in line with the Rochdale Envelope. Full assessments will accompany the application for full planning permission, when the cable route and installation methods are finalised.</p> |
| | <p>* Lubricants used in directional drilling can be toxic in freshwaters therefore it is important that they are contained within the working area and during drilling under the river. It is advised to undertake a geotechnical assessment of the ground under the river in advance of works taking place. The use of boreholes can assist in estimating the depth of gravel or bedrock type that lies under the channel, and inform the depth at which drilling should take place. Ideally drilling should be through underlying rock to prevent the risk of lubricant leaching up to the riverbed surface. The exit and entry points of the drill should be set >50m from the river.</p> | <p>A general assessment of installation options has been included at this stage, in line with the Rochdale Envelope. Full assessments will accompany the application for full planning permission, when the cable route and installation methods are finalised.</p> |
| | | <p>Scottish Natural Heritage (SNH) (continued)</p> <p>* Drilling work should be timed to avoid the main spawning and egg incubation periods, November-May.</p> |

| Organisation | Summary of Response | MORL Approach |
|---|--|--|
| <p>The EIA should include a detailed method statement describing drilling operations, contingency plans for preventing and controlling pollution, the scale of works, consideration of the trenching needed at either end of the drilling etc. This should be supported with information from site investigation that should include information about the substrate under the riverbed, the depth under the river that drilling will take place at and the risk of pollution breaking through.</p> <p>SNH are satisfied that surveys for freshwater pearl mussel are not required provided adequate sediment management and pollution prevention plans are in place. Should these proposals change, and river engineering works are considered necessary then a survey may be required.</p> | <p>A general assessment of installation options has been included at this stage, in line with the Rochdale Envelope. Full assessments will accompany the application for full planning permission, when the cable route and installation methods are finalised.</p> <p>Noted</p> | <p>This is included in Chapter 4.5 (Intertidal Ecology) and Chapter 4.6 (Terrestrial Ecology).</p> |
| <p>Protected Species</p> <p>In addition to identifying potential impacts on protected species along the onshore cable route and substation area, MORL should consider impacts on protected species at the landfall site and how to mitigate any impacts.</p> <p>As the time between survey work and construction work is unknown, it is important that pre-construction survey work is undertaken to ascertain any changes in the degree of wildlife activity, as this could have implications for the level of mitigation required.</p> <p>A report summarising pre-construction survey results with a comprehensive list of mitigation techniques should be submitted for approval, leaving sufficient time for any wildlife licence applications to be processed prior to construction.</p> <p>The ES should provide details of appropriate mitigation and state whether or not licences are likely to be required.</p> | <p>Noted</p> <p>Noted</p> <p>Noted</p> | <p>This is included in Chapter 4.5 (Intertidal Ecology) and Chapter 4.6 (Terrestrial Ecology).</p> |
| <p>Natural and Semi-Natural Habitats</p> <p>SNH support the proposal to undertake Phase 1 survey along the cable corridor routes and buffer with the understanding that follow-up National Vegetation Classification work for important areas may be required. We advise that this is also used to identify where protected species survey work, as discussed in the Scoping Report.</p> | | <p>Chapter 4.6 (Terrestrial Ecology) provides detail on the Phase 1 Habitat Survey undertaken.</p> |

| Organisation | Summary of Response | MORI Approach |
|---|---|--|
| Scottish Natural Heritage (SNH) (continued) | <p>* SNH advise that any areas of carbon rich soils are identified in the EIA and recommend further liaison with SEPA on this matter.</p> <p>Landscape and Visual Impact Assessment</p> <p>* SNH does not consider the development to raise any landscape concerns that would be of regional or national importance; therefore SNH defers the Landscape and Visual Impact Assessment to Aberdeenshire Council.</p> <p>In Combination and Cumulative Impacts</p> <p>* In addition to the types of large scale developments identified in the Scoping Report, it is recommended to consider various other cable works planned or proposed in the vicinity of the Moray Coast as proposed in Chapter 2.28 in the National Planning Framework 3 (draft), including Peterhead.</p> | <p>Chapter 3.2 (Hydrology, Hydrogeology and Contaminated Land) includes an assessment of peatland.</p> <p>Noted</p> <p>Noted</p> <p>Noted</p> |
| Aberdeenshire Council Environmental Health | <p>* The proposed methodology is satisfactory.</p> | <p>* The impact of landfall location will need to be assessed by FPU.</p> |
| Aberdeenshire Council Flood Prevention Unit (FPU) | <p>* Should the cable route pass through any coastal structures then it is expected that they are reinstated to full strength.</p> | <p>The landfall point construction is detailed in Chapter 2.2 (Project Description). Land will be fully reinstated (see Chapter 3.2 Hydrology, Geology and Contaminated Land).</p> <p>The cables will be buried at the landfall point (see Chapter 2.2).</p> |

| Organisation | Summary of Response | MORI Approach |
|--|---|--|
| Aberdeenshire Council Flood Prevention Unit (FPU) (continued) | <ul style="list-style-type: none"> * The locations of the two onshore substations should consider flood risk. It is advised to consult SEPA's indicative 1 in 200 year flood map to get an initial indication of whether or not there may be a flood risk for the chosen location(s). * All structures over 300 feet will need to be charted on aviation maps. CAA would be interested in any proposed schedule of promulgation of the construction of the turbines. * If the proposed routes to transport components for construction required alterations FPU would have to consider the impacts of this, from a flooding perspective. | <p>Flood risk is fully considered in Chapter 3.2 (Hydrology, Geology and Contaminated Land).</p> <p>There will be no onshore structures above 300 feet.</p> <p>Traffic and transport is assessed in Chapter 5.6 and associated appendices.</p> |
| Aberdeenshire Council | <ul style="list-style-type: none"> * The search corridor for the onshore transmission cable route and the onshore substations contains 676 potentially contaminated sites. Types of sites include landfills, a gasworks, filling stations, sundry small industrial / commercial enterprises and potential infill such as former quarries and mill lades. If any contaminated sites lie on the finalised cable route or the site substation then site investigation must be carried in accordance with BS10175:2011. Site findings may dictate that remedial works are required prior to the commencement of development works. * Schedule 4 of the Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2011 states the information which should be included in an ES. These guidelines offer the backbone to the structure of an ES and should be used as the basis of this ES. * Environmental issues and likely aspects of the environment to be affected by the development are of key importance. Detailed survey work would be required to inform this ES. * Following analysis of the aspects of the environment likely to be significantly affected, a detailed assessment of the effects themselves would be required along with mitigation measures proposed. | <p>Contaminated land is identified and assessed in Chapter 3.2 (Hydrology, Geology and Contaminated Land).</p> <p>Noted</p> <p>Noted</p> <p>Noted</p> |

| Organisation | Summary of Response | MORI Approach |
|--|---|---------------------------|
| <p>* Examples of the types of issues that should be addressed in this ES, are not limited to, but include:</p> <ul style="list-style-type: none"> (1) Climate change; (2) Local economic effect; (3) Landscape resource; (4) Soils and geology; (5) Visual amenity; (6) Ornithology; (7) Ecology; (8) Nature conservation; (9) European protected species; (10) Hydrology and water supplies; (11) Forestry and tree felling; (12) Transport and traffic; (13) Noise; (14) Cultural heritage and archaeology; (15) Land use; (16) Land ownership; (17) Tourism and recreation; and (18) Proposed mitigation measures. <p>Aberdeenshire Council (continued)</p> | <p>All issues detailed are covered throughout this ES.</p> | <p>Noted</p> |
| | <p>* Overall, the main environmental impacts and proposed accepted methodology appear to be covered.</p> <p>Aberdeenshire Council are content with the scope of the assessment, the environmental effects identified and the significant effects to be scoped in.</p> <p>* Consultations were undertaken with Aberdeenshire Council's Natural Heritage Team, who raised no issues regarding their particular interest.</p> <p>Terrestrial Ecology</p> <p>* The range and scope of the ecological surveys is acceptable.</p> <p>* In regards to the habitat surveys, Aberdeenshire Council can provide details of any Tree Preservation Orders within the search area, if required.</p> | <p>Noted</p> <p>Noted</p> |

| Organisation | Summary of Response | MORI Approach |
|---|--|---|
| Recreation / Access / Tourism <ul style="list-style-type: none"> * Much of the information in the Socio-Economics Chapter may have been copied across from the EIA conducted for the Beatrice Scheme. Much of the EIA would be relevant, however the onshore and inshore interests are not relevant this far east. It would not be appropriate to use a baseline based on data covering the Highlands, as this part of Aberdeenshire has a significantly different tourism market than that of the Highlands / Inverness. | <p>The assessment presented within Chapter 5.5 Socio-Economics provides a more detailed review of tourism assets within Aberdeenshire, although it is recognised that tourism numbers are only available at a regional level.</p> | <p>The assessment presented within Chapter 5.5 Socio-Economics provides a more detailed review of tourism assets within Aberdeenshire, although it is recognised that tourism numbers are only available at a regional level.</p> |
| Aberdeenshire Council Natural Heritage (continued) | <ul style="list-style-type: none"> * In terms of recreation it would also be more appropriate to consider facilities within the area of search as opposed to Lossiemouth Sailing Club or KinCraig Wildlife Park. | <p>The assessment presented within Chapter 5.5 Socio-Economics (section 5.5.2) recognises that Inverbryndie is well used and considers the impact of disturbance/closure. Sandend is no longer considered a potential cable landfall area and therefore not considered in the assessment.</p> |
| Background | <ul style="list-style-type: none"> * It is noted that the project development process is yet to finalise the cable landfall site, the specific corridor for the cable link and precise substation locations, although areas of search and site options are known. | <p>Landfall has now been selected (Inverbryndie) and is assessed in this ES.</p> |

| Organisation | Summary of Response | MORL Approach |
|--------------------------------------|---|---|
| | <p>Landscape and Visual Impact Assessment</p> <ul style="list-style-type: none"> * In terms of a standard approach to the EIA process, for a full planning application, MORL needs to carry out a landscape and visual impact assessment which should be produced in accordance with the Guidelines for Landscape and Visual Impact Assessment (third edition). * Sensitive receptors include local residences, transportation corridors, settlements, places of tourism, cultural, conservation and heritage interest etc. In terms of locally significant viewpoints, the Cuish Monument and New Deer should be used as a more strategic viewpoint for the LVI/A process. | <p>Undertaken in Chapter 5.3 (Seascape, Landscape and Visual Assessment).</p> |
| Aberdeenshire Council (continued) | <ul style="list-style-type: none"> * To achieve best practice, the EA process should contribute to the site development and design process, in terms of identifying site(s) opportunities and constraints and locating and designing the development to have minimal or ideally no adverse effects on valued aspects of the development site, its landscape and setting. | <p>Included in Chapter 5.3 (Seascape, Landscape and Visual Assessment).</p> |
| | <p>Cumulative LVI/A</p> <ul style="list-style-type: none"> * The LVI/A assessor should review all recent publicly known planning applications and pre-application enquiries with significant visual implications for the area. The cumulative assessment can extend to around 6 km from the proposed development site; however this should be extended for significant development in the district and sensitive viewpoints such as the Cuish monument. <p>Detailed Comments</p> <ul style="list-style-type: none"> * All elements of the proposed development should be designed to have minimal or no impact on the valued landscape character of the local area. | <p>At this stage, the onshore substations are assessed in an indicative location and will be fully assessed when the application for full planning permission is submitted.</p> |
| | | <p>Detailed design of all elements are not available at this stage, and a Rochedale Envelope approach is adopted. Final design of all elements will accompany the application for full planning permission.</p> |

| Organisation | Summary of Response | MORI Approach |
|--------------------------------------|---|--|
| | <ul style="list-style-type: none"> * The substation buildings may be of a very large scale for the locality. To minimise possible visual impacts, buildings should be placed as low in the local landform as possible with screening. Screening should be particularly designed around sensitive local receptors such as residences, transportation corridors and local settlements to minimise potential adverse effects. | <p>The substations have been assessed in an indicative location within the landscape in the substation area, and an indicative screening design has been included in Chapter 5.3 (Seascape, Landscape and Visual Assessment) and associated figures.</p> |
| Aberdeenshire Council (continued) | <ul style="list-style-type: none"> * A key mitigating factor for the site's general environment is the quality of design of the buildings and landscape. A development with an aesthetically pleasing appearance would have a positive impact on the area and aid development assimilation in the area. | <p>Detailed design of all elements are not available at this stage, and a Rochdale Envelope approach is adopted. Final design of all elements will accompany the application for full planning permission.</p> |
| | <ul style="list-style-type: none"> * Screening elements of the development with predicted adverse effects can be achieved with earthworks and screen planting. All earthworks should be designed to appear organic and naturalistic. Screen planting should be based on the list of native plants appropriate to the Buchan area. | <p>An indicative screening design has been included in Chapter 5.3 (Seascape, Landscape and Visual Assessment) and associated figures.</p> |
| | <ul style="list-style-type: none"> * In terms of site assessment, as far as practical existing woodland planting etc. should be conserved and incorporated into the development. | <p>An indicative screening design, including existing woodland, has been included in Chapter 5.3 (Seascape, Landscape and Visual Assessment) and associated figures.</p> |
| | <ul style="list-style-type: none"> * Maximising landscaping would be a major factor of mitigation across a development site, and should the site's baseline conditions be suited to other habitat development (with obvious biodiversity value) then that should be incorporated into the development proposal. Maximising future conservation value of the development would be a worthy project objective. | <p>An indicative screening design has been included in Chapter 5.3 (Seascape, Landscape and Visual Assessment) and associated figures.</p> |

| Organisation | Summary of Response | MORL Approach |
|--|---|---|
| Aberdeenshire Council (continued) | <ul style="list-style-type: none"> * Regarding an initial planning application, MORL is advised to submit as much information as available to them at that point in the planning process. With regard to design, the locations and dimensions of all aspects of the Project should be submitted at this stage as well as information on colours and finishes. | <p>MORL has submitted with this application as much detail as possible. The subsequent application for full planning permission will provide further detailed information on design aspects of the infrastructure.</p> |
| | <ul style="list-style-type: none"> * Regarding landscaping, MORL needs to demonstrate their commitment to this element of the Project from the outset, indicating the location of all different elements of landscaping and related features. A landscape maintenance plan should be submitted to demonstrate MORL's medium to long term commitment to the application's environmental design. | <p>Following analysis several woodland design concepts were considered (see Figure 5.3-28). An indicative screening design has been included in Chapter 5.3 (Seascape, Landscape and Visual Assessment) (see paragraphs 5.3.4.33 to 5.3.4.38). The indicative landscape proposal is shown on Figure 5.3-29. The maintenance plan will be developed and included with the application for full planning permission, once a screening design has been finalised. The maintenance plan can be secure by an appropriately worded condition.</p> |
| | <ul style="list-style-type: none"> * Having reviewed Section 5.3.9 'Archaeology and Cultural Heritage' of the submitted Scoping Report, it is confirmed that an EIA will be required for the historic environment given the scale, type and location of the proposed works, and the potential that they have to impact upon archaeological remains. * The recommended methodology agreed in Section 5.3.9 is agreed, however on page 149 – List of 'Best Practice Guidance', Planning Advice Note 42 should be replaced with the more up-to-date Planning Advice Note 2 / 2011. | <p>Noted</p> <p>Noted</p> |

1.2 Regulatory and Policy Context

1.2.1 *Introduction*

- 1.2.1.1 Under the provisions of the Energy Act 2004, operation of an offshore transmission system became a licensable activity. In keeping with EC unbundling legislation, it is not permissible for a generator to transmit power over transmission lines other than in very limited circumstances for the purposes of commissioning and over a time limited maximum 18 month period. The consequence of this is that the owners and operators of the offshore wind farms cannot retain operational control of any OFTO assets. It is, however, permissible for the generator to construct and install OFTO assets prior to the assets becoming operational. Exercising such a choice is deemed as the generator build option.
- 1.2.1.2 At the time when the Section 36 consents for the offshore generating stations (OGS) were applied for there was no single consent which provided permission to construct infrastructure which spans offshore and onshore terrain in Scotland. Recent changes to legislation which allow applicants for Section 36 consents for generating stations offshore to apply for “deemed planning” permission as part of the Section 36 consent application do not apply retrospectively and are therefore not applicable to the MORL TI. The construction of onshore (i.e. above mean low water springs) ancillary infrastructure requires consent under The Town and Country Planning (Scotland) Act 1997. This consent will be applied for as separate Town & Country Planning applications to be submitted to Aberdeenshire Council as the relevant Local Planning Authority.

1.2.2 *The Town and Country Planning (Scotland) Act 1997*

- 1.2.2.1 An Application under the Town & Country Planning (Scotland) Act 1997 for planning permission in principle will be submitted to Aberdeenshire Council, as the local planning authority, for the OnTI works. This will comprise one application for the modified export cable landfall, the modified onshore cable route corridor, the MORL substation and the regional transmission owner (TO) substation.
- 1.2.2.2 There are a number of relevant national planning policy and guidance documents in Scotland consisting of National Planning Framework (NPF), Scottish Planning Policy (SPP), Planning Advice Notes (PANS) and Planning Circulars. These policies are further supported by Statutory Development Plans which comprise Strategic Development Plans and Local Development Plans.
- 1.2.2.3 The Aberdeenshire and City Strategic Development Plan (Aberdeen City Council & Aberdeenshire Council, approved 2014) and the Aberdeenshire Local Development Plan (Aberdeenshire Council, adopted 2012) will also apply to this development as the entire proposed onshore works will lie within Aberdeenshire Council (Northeast area). Section 25 of the 1997 Act provides that determinations must be made in accordance with these development plans unless material considerations indicate otherwise. Both plans support the principle of renewable energy developments provided they comply with the provisions of local planning policy.
- 1.2.2.4 The applications are accompanied by a Updated Planning Statement which updates the Planning Statement submitted in support of the applications for the Project in August 2012. It sets out the detailed planning policies applicable to the modified TI and provides a planning assessment of the modified TI based on national and local planning policy.

1.2.3 *Marine (Scotland) Act 2010 and The Marine and Coastal Access Act 2009*

1.2.3.1 A Marine Licence will be sought by MORL for the development of the offshore substations and offshore export cables in terms of Part 4 of the Marine and Coastal Access Act 2009 (to the extent the modified TI is located in the Scottish offshore region i.e. 12 to 200 nm) and Part 4 of the Marine (Scotland) Act 2010 (in respect of those elements of the modified OfTI located within Scottish inshore region (i.e. between 0-12 nm)).

1.2.4 *Requirement for An Environmental Impact Assessment (EIA)*

- 1.2.4.1 In terms of EC Directive 85/337/EEC on the assessment of the effects of certain public and private projects on the environment (as amended) and now codified in Directive 2011/92/EU (the EIA Directive) certain developments must be subject to EIA. The purpose of the Directive is to ensure that, in considering whether to grant consents for developments that are likely to have significant environmental effects, the consenting authorities have all the necessary environmental information on which to base their decision.
- 1.2.4.2 Under The Town and Country Planning (Environmental Impact Assessment) (Scotland) Regulations 2011, the onshore substations are classified as Schedule 2 development (given the development area) and therefore require an EIA. MORL has elected to include the export cables (onshore and offshore) and OSPs in the EIA as they form an integral part of the modified TI and therefore are a part of EIA development.
- 1.2.4.3 There is a requirement to consider cumulative and in-combination effects as part of the EIA process. Projects to be included in such an assessment must include existing projects and those currently in the planning system. Projects to be included in such an assessment must include not only other potential renewable energy projects, but also other types of project taking place in the marine/coastal and terrestrial environment.

1.2.5 *Scotland's National Marine Plan Consultation Draft (2013)*

- 1.2.5.1 The National Marine Plan (Consultation Draft) is applicable to both Scottish inshore waters (out to 12 nautical miles) and offshore waters (12 to 200 nautical miles). The National Marine Plan (NMP) provides a number of general marine policies that apply to all marine development proposals as well as providing a number of sectoral marine policies, relating to specific development sectors such as renewable energy.
- 1.2.5.2 The NMP sets out a number of overarching objectives that apply to all developments within the marine environment. The objectives are set out under the following headings within the plan:
- Achieving a sustainable marine economy;
 - Ensuring a strong, healthy and just society;
 - Living within environmental limits;
 - Promoting good governance;
 - Using sound science responsibly; and
 - EU Marine Strategy Framework Directive good environmental status descriptors.

- 1.2.5.3 The overarching objectives, strategic objectives and general policies of the NMP set the context for the sector specific policies and guidance within the plan. In terms of renewable energy, the NMP provides its sector specific offshore renewable energy policies in Chapter 11.

1.2.6 *The Crown Estate Act 1961 and The Energy Act 2004*

- 1.2.6.1 The Crown Estate Commissioners are the owner of the foreshore and the seabed below the territorial seas of the UK under the Crown Estate Act 1961 and are the party entitled to exercise the right to exploit areas outside the territorial seas for the production of energy from water or winds within the areas designated under the Renewable Energy Zone (Designation of Area) Order 2004. The Commissioners require a lease of the seabed and foreshore within the territorial seas or a lease of rights of the areas outside the territorial seas to be granted for developments on the marine estate, including cable laying and construction of the offshore substation. The Agreements for Lease provide for the grant of a Lease after the Key Project Consents are obtained. This is a statutory consent granted in the form of a lease.

1.2.7 *Habitats Directive (Directive 92/43/ECC) and Wild Birds Directive (Directive 2009/147/EC):*

Requirement for Appropriate Assessment

- 1.2.7.1 The Habitats Directive provides for the conservation of natural habitats and of wild flora and fauna including in offshore areas. The Wild Birds Directive applies to the conservation of all species of naturally occurring wild birds including in offshore areas. The Directives have been transposed into Scottish Law by the Conservation (Natural Habitats &c) Regulations 1994 (as amended) (Habitat Regulations), the Wildlife and Countryside Act 1981 (in relation to birds), and in relation to the offshore marine area, by the Offshore Marine Conservation (Natural Habitats &c) Regulations 2007 (as amended) (Offshore Habitats Regulations). The Regulations require a Habitats Regulation Assessment (HRA) to be conducted by the 'competent authority' before a plan or project that is likely to have a significant effect on the integrity of designated Special Protection Areas (SPA) or Special Areas of Conservation (SAC), can be given consent, permission or other authorisation. The UK SACs and SPAs form the Natura 2000 network, which is at the core of the Habitats and Birds Directives. Scottish Government Policy extends the protection afforded to SACs and SPAs to proposed SACs (pSAC) and proposed SPAs (pSPA).

European Protected Species

- 1.2.7.2 Annex IV of the Habitats Directive lists certain animal and plant species of European Community interest which are in need of strict protection. Any of these species whose natural range includes any area in Great Britain are called 'European Protected Species' and are afforded protection under the Habitats Regulations and/or the Offshore Habitats Regulations. Their places of shelter are fully protected and it is an offence to damage, destroy or obstruct access to or otherwise deny the animal use of a breeding or resting site, whether deliberately or not. It is also an offence to disturb in a manner that is, or in circumstances which are likely to significantly affect the local distribution or abundance of the species, disturb in a manner or circumstances which are likely to impair its ability to survive, breed or reproduce, or rear or otherwise care for its young.

1.2.7.3 Licences may be given authorising activities affecting European Protected Species of plants or animals which would otherwise be illegal under the Regulations. The licences are granted by Scottish Natural Heritage (SNH) or Marine Scotland depending on the reason for the licence application.

1.2.8 *The Wildlife and Countryside Act 1981 and the Nature Conservation (Scotland) Act 2004*

1.2.8.1 The Wildlife and Countryside Act 1981 (as amended) (the 1981 Act) is designed to protect wildlife in the UK. The Nature Conservation (Scotland) Act 2004 (the 2004 Act) is the principal law by virtue of which wildlife is protected in Scotland. Provisions of both Acts tend to overlap as the 1981 Act also offers wildlife protection in Scotland. All species of wild birds are afforded protection under the Acts. Furthermore, Chapter 1 of Part 2, and Schedules 1 and 5, of the 2004 Act provide for the enhanced protection and management of SSSIs, requiring the preparation of site management statements and amending notification procedures. The provisions place a duty on public bodies for the further conservation and enhancement of SSSIs, providing a new offence whereby third parties can be convicted for damaging SSSIs and enable the making of byelaws for the protection of SSSIs. The 2004 Act repeals the SSSI provisions of the 1981 Act.

1.2.9 *Protection of Badgers Act 1992*

1.2.9.1 The Protection of Badgers Act 1992, (as amended), makes it an offence to recklessly take, injure or kill a badger, or destroy or cause disturbance to its sett. Any sett within an active badger territory is afforded legal protection, regardless of when it may have last been used. In addition, badgers are afforded protection from cruel ill-treatment, which includes preventing a badger access to its sett, as well as causing the loss of significant foraging resources within a badger territory.

1.2.10 *Wildlife and Natural Environment (Scotland) Act 2011*

1.2.10.1 Following the introduction of the Wildlife and Natural Environment (Scotland) Act 2011 (WANE), Scottish Ministers have delegated the majority of their species licensing powers to SNH. Scottish Ministers delegated all existing licensing powers under the Wildlife and Countryside Act 1981, Protection of Badgers Act 1992 and Habitats Regulations to SNH, though there are exceptions in certain areas where Scottish Ministers have retained their licensing powers in respect of cetaceans (whales, dolphins and porpoises). WANE modernises outdated legislation and corrects anomalies and weaknesses in current legislation. It is focused on countryside management (e.g. modernising game law and strengthening protection of badgers), but also changes the licensing system for protected species, regulates the control of invasive non-native species, and makes operational changes to the management of SSSIs.

1.2.11 *Salmon and Freshwater Fisheries (Consolidation) (Scotland) Act 2003*

1.2.11.1 Consideration is required to be given to the Salmon and Freshwater Fisheries (Consolidation) (Scotland) Act 2003. The Act offers protection to salmon and sea trout.

1.2.12 Protection of Seals Under The Marine (Scotland) Act 2010

- 1.2.12.1 On the 1st February 2011, it became an offence to kill, injure or take a seal at any time of year, except to alleviate suffering or where a licence has been issued to do so by Marine Scotland under Part 6 of the Marine (Scotland) Act 2010. The method of killing or taking seals is detailed in the licence issued and regular reporting is required.

1.2.13 Marine Strategy Framework Directive (Directive 2008/56/EC)

- 1.2.13.1 The Marine Strategy Framework Directive 2008/56/EC (MSFD) aims to achieve Good Environmental Status in Europe's seas by 2020. Good Environmental Status involves protecting the marine environment, preventing its deterioration and restoring it where practical, while using marine resources sustainably. This fits well with the UK's vision of 'clean, healthy, safe, productive and biologically diverse oceans and seas'. The MSFD sets out 11 high level Descriptors of Good Environmental Status which cover all the key aspects of the marine ecosystem and all the main human pressures on them.
- 1.2.13.2 It is inextricably linked to the Water Framework Directive 2000 / 60 / EC (WFD). WFD relates to improving and protecting the chemical and biological status of surface waters throughout a river basin catchment from rivers, lakes and groundwater through to estuaries (transitional) and coastal waters to one nautical mile out to sea (three nautical miles in Scotland) and overlaps with MSFD in coastal waters.

1.2.14 Water Environment and Water Services (Scotland) Act 2003

- 1.2.14.1 Under the Water Environment and Water Services (Scotland) Act 2003 river basin management plans must be produced and implemented. River basins include all estuaries and coastal waters extending to 3 nm seaward from territorial waters. Any proposed development within 3 nm must have regard to the requirements of the WFD to ensure that all surface waters achieve Good Ecological Status and that there is no deterioration in status.

1.2.15 Land Reform (Scotland) Act 2003

- 1.2.15.1 The Land Reform (Scotland) Act 2003 established statutory rights of responsible access to land and inland water for outdoor recreation, crossing land and water and for some educational and commercial purposes (also known as Scottish access rights).

1.2.16 Other Consents Required

- 1.2.16.1 The generating stations have already been consented under Section 36 of the Electricity Act 1989. Marine Licences for the Telford, Stevenson and MacColl wind farms have been applied for and have been given EIA approval. They await a regulatory decision.

- o Auxiliary transformers;
- o Control and instrumentation equipment;
- o Telecoms equipment;
- o Control buildings; and
- o Fenced compounds.

1.1.5.11 MORL will require one onshore AC substation (which will form part of the future OFTO assets), covering an area of up to approximately 270 x 135 m at the connection point to the southwest of New Deer. In order to allow the connection of MORL to the national grid, an additional substation must be consented and constructed which will ultimately be owned by the regional TO and will feed into the existing 275 kV overhead line. This substation will be up to 270 x 170 m. Each substation will be a maximum of 13 m in height. The onshore substation site identified by MORL allows for the co-location of MORL and the additional substation which together will occupy an area no more than 10 hectares in size.

1.1.6 Consent Applications Submitted

- 1.1.6.1 A Marine Licence for the modified OfTl (up to Mean High Water Springs) and Town and Country Planning Permission for the modified OnTl (from Mean Low Water Springs) will be required (See section 1.2 for Policy and Legislative Context).
- 1.1.6.2 Consents under Section 36 of the Electricity Act 1989 were granted for each of the wind farm sites, Telford, Stevenson and MacColl, in March 2014. These consents allow MORL to build and operate the offshore wind farms. In addition, MORL applied for a Marine Licence for each wind farm site in August 2012. These licences will allow MORL to deposit wind farm infrastructure on the seabed. These primary consents together will enable the construction and operation of the wind farm infrastructure.
- 1.1.6.3 A separate Marine Licence was received for the installation of an offshore meteorological mast within the EDA. The Marine Licence was issued in January 2014 and construction will take place August 2014. MORL also applied for a Marine Licence in August 2012 for the offshore DC TI to Fraserburgh. This Marine Licence was granted by Marine Scotland in June 2014. In the event that the current application for a Marine Licence for the modified TI is granted and implemented then the works authorised under the DC Marine Licence will not be carried out.
